Introduction

This document contains the release notes for LABWORKS 7.0. The following sections describe the release and provide late-breaking or other information that supplements the main documentation.

This is a release that improves quality, reliability and performance and adds enhanced functionality for several of LABWORKS core modules.

Overview

LABWORKS 7.0 is the latest version of LABWORKS LIMS.

What's New 7.0

New Features:

Sr.No	Item	Description
1.	Use ObjectPublisher for custody tracking reports.	Default report templates (CRYSTAL_CUSTODY, CRYSTAL_RESULTS) have been added to ObjectPublisher. Supported apps are: LWSampleLogin, ProcessScheduler6.
2.	Update crystal report data sources.	New SAMPLE columns have been added. SIMC.xsd, LWReporting.xsd data sources have been updated.
3.	Remove the ADD_TO_PROCESS_SCHEDULER system parameter.	ADD_TO_PROCESS_SCHEDULER has been deprecated
4.	Enhance sample login templates with new sample properties SPRIORITY, REQTIME, CUSTOMER.	The new properties have been added to LWSampleLogin template configuration.
5.	Enhance the reorder and the copy operation in the ProcessScheduler6 app.	Added copying sample comments, user-defined fields, sample attachments, special info fields, result specifications, analyses creation in ProcessScheduler6.
6.	Container property enhancements	Analysis List Maintenance, LWSampleLogin, Results Entry, PostResults6 applications have been enhanced to support Container properties e.g. Preservative, Container Type
7.	Add default qualifier option to LABWORKS analyses	LWAnalysis Maintenance application has been enhanced to support default qualifier for analysis codes/analytes for Single and Multicomponent Analysis
8.	AuditTrailViewer Enhancement - improve querying capabilities	AuditTrail Viewer application has been enhanced with "Contains" filter for Object Type and Object ID fields
9.	Email Crystal Reports support	Crystal Report Viewer application has been enhanced with the ability to attach the report being viewed to an email and send the email
10.	TNI Compliance - MDL Study Tracking and Reporting	A new application has been developed for tracking Control Chart and MDL Study. MDL Study supports CLASSIC as well as NELAC Rulesets.
11.	CustLog6 window minimizing (calling from LWSampleLogin)	CustLog6 application window can be minimized and restored when invoked from LW Sample Login
12.	Add sample header fields to Data Viewer	LWData Viewer application has been enhanced to support Report Address and Invoice Address fields in Sample Information configuration
13.	Dataviewer icon and GTV launch enhancements	LWDataViewer has been enhanced so that with "Send Data To GTV" option user can start graphical trend viewer, without the need to manually "copy / paste" the data into the application
14.	Increase MDL property length to 14 characters	LABWORKS applications have been enhanced to increase MDL property length to 14 characters

4.5	LADMODIC Fracil Configuration	LADMORKS Fracil Configuration Form John John Son improved
15.	LABWORKS Email Configuration	LABWORKS Email Configuration Form labels have been improved
16.	Form label improvements LABWORKS error log – Do not load	Error Log Viewer application has been enhanced with the
10.		Error Log Viewer application has been enhanced with the
47	all records at first.	functionality to truncate all the records in database.
17.	eWorksheet - populate current LW	eWorksheet application has been enhanced to populate current
	user ID when creating	logged-in LABWORKS User ID as "Analyst" while creating new
		eWorksheet
18.	eWorksheet Misc UX	eWorksheet application has enhanced UX and eWorksheet
	Enhancements	Template changes are reflected in eWorksheet Builder without
		restarting eWorksheet Builder
19.	Add ability to leave eWorksheets	eWorksheet application has been enhanced to leave eWorksheets
	locked for cells containing	locked for cells containing macro/formula/code
	macro/formula/code.	
20.	eWorksheet Enhancements: ability	eWorksheet application has been enhanced to have the ability to
	to resize window	resize the window
21.	eWorksheet from QCBatch Sample-	eWorksheet application has been enhanced to support Up-Down
	Test List Up-Down Arrow	Arrow movement for QCBatch Sample-Test List
	Enhancement	7 movimore nor Gobaton Gampio 100t Elot
22.	eWorksheet visible within Results	Results Entry and Sample Analysis and Validation applications
۷۷.	entry and Result Validation screens	have been enhanced so that eWorksheet application can be
	entry and Nesult Validation Screens	
- 22	aWarkahaat anhanaam	launched for the selected sample and analysis
23.	eWorksheet enhancements	eWorksheet application has been enhanced to support "Validated"
0.4	A	status
24.	Add LWEXE path to Help About	LABWORKS application has been enhanced to add LWEXE path
	dialog	to Help and About dialog
25.	Instrument Maintenance - Add Front	Instrument Maintenance application has been enhanced to add sor
	page sort column for Location	column for Location on front page
26.	Inventory - Label Counter - Increase	LWInventory Management application has been enhanced so that
	to support 6 digits	Label counter is increased to support 6 digits
27.	Inventory - Add Location to Label	LWInventory Management application has been enhanced so that
		Item Location is printed on the label.
28.	Inventory Module - Display	LWInventory Management application has been enhanced so that
	DISPOSED in Item Stock for	items having "DISPOSED" status are displayed in Inventory List
	Restocking	based on the configuration
29.	PSSCHEDULE and SAMPLE table	LABWORKS application has been enhanced to support updated
	merge tasks - Workflow Architect	Workflow Architect State transitions for Sample object
	Changes	. ,
30.	Enhance Explorer to expose friendly	LW Explorer application has been enhanced to display complete
	names for new SAMPLE DB	property names in the filter list
	properties	
31.	LOCATION code acceptable	Location List Maintenance application has been enhanced to
	characters	support acceptable characters for LOCATION code
32.	Launch QA QC Batch Builder for the	LWData Viewer and LW Explorer applications have been enhanced
<i>52</i> .	selected QA QC Batch ID from Data	so that QA QC Batch Builder application can be launched for the
	Viewer/LW Explorer	selected QA QC Batch ID
33.	LWQuickTrack - enhancement for	LWQuickTrack application has been enhanced to support
<i>აა.</i>		
24	print labels	Container Label printing
34.	QuickTrack Usability and interface	LW QuickTrack application has been updated for enhanced
0.5	issues	usability
35.	Scan documents directly into	LWSampleLogin application has been enhanced so that documents
	attachments	and images can be directly scanned and associated with the
	1,,,,	sample during login
36.	LW Sample Login - Moving the	LW Sample Login has been enhanced to add configuration for
	cursor vertically	"Enter Key Action" as down or right
37.	Graphical Trend Viewer - Copy to	LWDataViewer application has been enhanced to support copy to
	clipboard	clipboard functionality for Graphical Trend Viewer
	Clipboard	
38.	License count exceeded locks all	License Manager has been enhanced so that when 10 users are
38.		License Manager has been enhanced so that when 10 users are logged in and the 11th user tries to login then he should get a
38.	License count exceeded locks all	
38.	License count exceeded locks all	logged in and the 11th user tries to login then he should get a warning message "The maximum number of Licenses are currently
38.	License count exceeded locks all	logged in and the 11th user tries to login then he should get a

	issues	formatting issues
40.	LWInventory introducing "grades" to selectively allow material, batch or bottle level granularity	LWInventory Management has been enhanced with "Grade" property to selectively allow material, batch or container level granularity
41.	Inventory Management Improvements	LW Inventory Management application has been enhanced to filter Alert Home Page based on Storage Location, add ability for authorized user to edit ITEM Stock, display Item unit along with quantity
42.	LWInventory allowing consumption in excess of available stock quantity	LWInventory Management application has been enhanced to display "Display Only Overflow Stock Records" checkbox, which when checked will display only the Inventory Items with negative quantity
43.	Inventory Management Improvements for large number of storage locations	Inventory Management application has been enhanced to support large number of Storage Locations with hierarchical selection view
44.	Inventory Mgmt - Mixture Storage Units and Consumption Units	LWInventory Management application has been enhanced to support Mixture Storage Units and Consumption Units
45.	Inventory Management Workflow Received before OPEN	LWInventory Management application has been enhanced to display records for all the statuses, configured in Workflow Architect, on Inventory Management grid
46.	Inventory Management Enhancement to assist tracking Columns (GC/LC)	LW Inventory Management application has been enhanced to assist tracking Columns (GC/LC)
47.	Multi Component Transfer - allow save all without having to individually select items	LW Multi Component Transfer application has been enhanced to allow selection of multiple items for saving so that user does not have to select individual items separately
48.	LWMCT supports Post Processing Programs	LW MultiComponent Transfer Application has been enhanced to support Post Processing Programs
49.	LWPostResult6 Enhancements	"IwPostResults6.exe" application has been enhanced so that if PR6_INPUTFILE SYSMGR setting is NULL then on executing "IwPostResults6.exe PR1" command, user will be prompted to select the input file.
50.	Allowing files greater than 10 MB to be attached to a QAQC Batch as a link	LABWORKS Document Attachment functionality has been enhanced so that if "ATTACH_OVER_MAXFILESIZE_AS_LINK" SYSMGR setting is true, then the document is automatically attached as link when over "ATTACHMENT_MAXFILESIZE" SYSMGR setting value.
51.	LWQAQCBatchBuilder - Allow custom Date Range modification to be stored per user	LW QAQC Batch Builder has been enhanced such that it will store Start Date / End Date modification on Existing and My Batch tab on per user basis
52.	Sample Login - assigning tests filter by department	LWSample Login was enhanced so that it is possible to assign test filters by department
53.	SampleLogin LocCode TestCode Search using Contains filter	LWSample Login, Analysis List Maintenance, LocList Maintenance application search facility has been enhanced for Location code and Analysis code to use "contains" instead of "starts with" search capabilities
54.	LWSampleLogin - Enhance Copy Paste functionality to include Location Code, Analysis Code and Comment	LW Sample Login application has been enhanced such that Copy Paste functionality includes Location Code, Analysis Code and Comment
55.	Modernize LWSampleLogin's look'n'feel by applying a more modern visualization template	LWSample Login has been enhanced to modernize its look'n'feel by applying a more modern visualization template
56.	LWServiceControllers form improvement	LW Service Controller application UI alignment has been enhanced
57.	Enhance LWSysCfg user onboarding process	LWSysCfg user onboarding process has been enhanced to update the users list based on UserHead table
58.	ModifySamples6 Minimize Window enhancement	ModifySamples6 application has been enhanced to support minimize window functionality
59.	MOR Create Data Set - ExportData with a Cross Ref Search	MOR application has been enhanced to support data export using Cross Reference Search

60.	MOR design program blocked when	MOR Setup application has been enhanced such that duplicate
04	duplicate output cell	output cell configuration is not allowed
61.	NGII Agilent GC for Method 2186	NGII Interface has been developed : Agilent GC for Method 2186
62.	NGII Horiba ICP Instrument Interface for ERCO	NGII Interface has been developed : Horiba ICP
63.	NGII QuantStudio 6 qPCR	NGII interface has been developed : QuantStudio 6 qPCR
64.	NWA SQC Charts - Add Method Reference	NWA SQC Charts have been enhanced to add Method Reference to the second label
65.	Allow comment import from post	Post Results 6 (PR6) application has been enhanced to allow
	result 6 on analyte level	comment import at analyte level based on OVERWRITECOMMENTS parameter
66.	PR6 command line processes records having space after Analyte Name	Post Results 6 application has been enhanced to handle space after Analyte Name
67.	PostResults6 Imports - allow	PostResults6 application has been enhanced to append or
	append of !COMMENT result in	overwrite the earlier narrative analysis result based on
	NTRLTS table	OVERWRITENARRATIVERESULT parameter
68.	Process Scheduler supports	Process Scheduler has been enhanced to support association of
	Container association	analysis codes to containers for timed groups
69.	Add sample description to Process	Process Scheduler has been enhanced to add Location Description
	Scheduler	as column option
70.	Process Scheduler - request	Process Scheduler has been enhanced to request username and
	username and password for data	password for data entry
	entry	
71.	Allow timed groups to be sorted	Process Scheduler has been enhanced so that timed groups can
72.	alphabetically in Process Scheduler	be sorted alphabetically as per selection
12.	Up/down record movement in	Process Scheduler application has been enhanced to support
70	Sample Receipt	up/down record movement on Sample Receipt configuration screen
73.	Process Scheduler - By Analysis	Process Scheduler application has been enhanced to support
7.4	Column Width and QC Batch ID's	Analysis Column Width of 24 characters
74.	Process Scheduler - Sort Order	Process Scheduler has been enhanced so that when selecting
		SampleModify, the list of samples selected previously is retained
7.5	Drosess Cabadular Davida ad ta	after completing Sample Modify
75.	Process Scheduler - Download to PDA	Process Scheduler application has been enhanced so that "Send to
	PDA	PDA" option creates a CSV file with a browse for the file save, so
76.	PSSCHEDULE and SAMPLE table	that the name and location of file can be specified
76.		LABWORKS application has been enhanced to merge Process
77	merge tasks	Scheduler and Sample table
77.	Allowing a user to modify the PS	Process Scheduler has been enhanced so that user can modify PS
	Priority on multiple samples at a time	Priority of multiple samples at a time
78.	Container Tracking from QC Batch	QA QC Batch Builder application has been enhanced to support
70.	Container Tracking from QC Batch	launching of LW Container Management for the samples in the
		batch
79.	QC Batching - add samples that are	QA QC Batch Builder application has been enhanced so that typed-
13.	already batched to a new batch	in or scanned Sample ID can be added to Available Sample Grid,
	anoday batoriod to a new batori	irrespective of the sample status
80.	QC Batching - add "contains" filter to	QA QC Batch Builder application has been enhanced to support
00.	all grids	"Contains" filter for all the grids
81.	QC Batching - Report Template	LW QAQC Batch Builder application has been enhanced to support
01.	functionality enhancement	multiple report templates
82.	Due Colors PALE Setting for	LW QAQC Batch Builder and eWorksheet applications have been
02.	QCBatching and eWorksheet	enhanced to support PALE setting for Due Date Colours
83.	Improvements to new version of	LWQuickTrack application has been enhanced to display "Analysis
03.	QUICKTRACK	Status" so that user can dispose the Container if the status is
	GOIORTIAOR	"Validated"
84.	Replicate Management - Add	Replicate Management application has been enhanced to display
07.	Sample ID to list of fields	Sample ID on Replicate Management Form
85.	REPORTHEAD.REPORTUSER	Report application has been enhanced so that
00.	needs to be added to the	REPORTHEAD.REPORTUSER field is added to
L	needs to be added to tile	וופוע וס מעמפע נע

	FLATDATA_REPORTHISTORY for	FLATDATA_REPORTHISTORY for export
	export/report	
86.	Result Entry - Analysis Code Sub- filtering	Results Entry application has been enhanced to display only the analysis codes assigned to samples based on "Filter by analysis assigned" configuration in Result Entry setup.
87.	Re-order tests from Results Entry	Results Entry application has been enhanced to support re- ordering of tests
88.	Resultls Entry - Edit Results Screen Improvement	Results Entry application has been enhanced to improve the usability on Edit Results Screen
89.	Analysis Start/End Date/Time Warning Prompt	Results Entry application has been enhanced such that invalid Analysis Start Date Time or End Date Time is highlighted with red background colour
90.	Allow raw results to be used in calculations, exports	Results Entry application has been enhanced so that raw results can be used in Calculations and Exports
91.	Locking analyst initials in result entry to a pick list	Results Entry application has been enhanced so that only valid analyst initials can be entered
92.	Results Entry - allow for ctrl+c / ctrl + v from keyboard	Results Entry application has been enhanced to support ctrl+c / ctrl + v from keyboard
93.	Results Entry - Bulk Audit Trail change logs	Results Entry application has been enhanced so that if "BULK_AUDIT" SYSMGR setting is true then audit trail will be recorded in bulk, only when the user presses save
94.	Results Entry - Importing PR6 data for single component results	Results Entry application has been enhanced to support AREF and MDL while importing PR6 data for single component results
95.	Result Entry - spec evaluation on cell focus change after rounding	Results Entry application has been enhanced to use "ROUND_RESULT_BEFORE_SPEC_EVALUATION" SYSMGR setting so that spec evaluation is applied after rounding, on cell focus change
96.	List of Units enhancements	Results Entry application has been enhanced to allow list of units to be filtered based on Units configuration in Analysis Maintenance application
97.	ResultsEntry - Replicate Data Entry - Usability	Results Entry application has enhanced usability to support F6 shortcut key for Replicate Management Form. Replicate Management Form has been enhanced to display Graph as a tab and to save the context for the form size.
98.	Filter Quick Navigation features in data validation	Sample Analysis And Validation application has been enhanced with quick search and alphabetical sorting features for analysis.
99.	Sample/Analysis validation highlight the violating results in the detail review for components	Sample Analysis validation has been enhanced so that the violating results are highlighted in the detail review for components
100.	Sample Invoice enhanced to support 4000 chars in SAMPNOS field	Sample Invoice application has been enhanced to support 4000 characters in SAMPNOS field in INVHEAD table
101.	MODSMPS6 - Add Update Due Date	MODSMPS6 application has been enhanced to support due date updates
102.	Sample Validation INI Enhancement to Show Qualifier	Sample Analysis and Validation application has been enhanced to display Qualifier field based on INI Setting "DISPLAY_QUALIFIER"
103.	ScanDaemon Service Improve Debugging	ScanDaemon - When in Debug mode temporary PR6 files are not deleted.
104.	Zip Report Folder Organization Enhancements	Zip Report application has been enhanced so that user defined folders can be added. Also reports organized by type (Crystal, Access, Label) have the ability to be copied to My Reports folder and User Defined folders.
105.	analysis in AutoLogin640	AutoLogin640 application has been enahnced so that bottle code can be attached to analysis
106.	Improve LWSampleLogin performance during configuration	LWSampleLogin application performance has been enhanced during template configuration

What's New 6.10

New Features:

Sr.No	Item	Description
1.	Analysis Qualification based on Method.	Analysis Qualification based on Method instead of Analysis Code for Personnel and Instruments
2.	Visually group analyses inside containers.	Visually group analyses inside containers without having to use #group analyses
3.	QuickTrack enhancements making container movement easier	LWQuickTrack application has been developed for Container Management.
4.	Corrective Action / Preventive Action Reporting (CAPA)	Corrective Action / Preventive Action Reporting (CAPA) functionality has been added.
5.	New personnel training & instrument calibration with events view	Personnel training & instrument calibration applications have been enhanced with events view.
6.	Scheduled Calibration and Maintenance Events	Instrument Calibration application has been enhanced to support scheduled calibration and maintenance events.
7.	Event notifications support	Event notifications for Personnel Training & Instrument Maintenance, as well as CAPA
8.	Persisted Group Enhancements & Migration Tool.	Persisted Group Enhancements so that they now work as log batch details constructs & Migration Tool for them
9.	ANALYSIS CODE CALCULATION - Divide by Zero	Analysis List Maintenance application has been enhanced to set the output of the result as per the SYSMGR configuration, upon receiving divide by zero error during the result calculation
10.	Enter a CAS number for containers in analysis maintenance	Analysis Maintenance application has been enhanced to support CAS number for Container
11.	Analysis List Maintenance - Improve Delete Analyte	Analysis List Maintenance application has been enhanced to improve the analyte deletion capability
12.	Audit trail entries for newly added results and filespec for imports	A bug has been fixed such that when CopyResults application is used the qualifier is set to "C", showing its a copied result
13.	AUTOLOGIN – Analytes	AutoLogin640 application has been enhanced so that the user can provide a specific list of analytes through the command prompt
14.	Automatic Exception Report to support Crystal formats and CRGEN6 options (export, mail)	CRGEN.INI added support for: SEL_FORMULA_HAS_DATA Use a data selection formula to verify there will be data on the report, if not then don't print
15.	Backlog report save to XLS improvement	Backlog Report has been enhanced to support export of same fields for Excel as that of CSV export
16.	CROSS REFERENCE - filtering search	A bug has been fixed in Cross Reference Search such that the records are filtered as per the search criteria
17.	Enhance Current Report Number Tracking Capability to Better Include Revision Number	Report Number tracking capability in Crystal Report has been enhanced to include revision number.
18.	Increase analyte name field size to accommodate longer names	LABWORKS has been enhanced to support Analyte Name field, to accommodate names up to 100 characters
19.	eWorksheet display Excel Ribbon	eWorksheet has been enhanced to display Excel Ribbon
20.	eWorksheet Enhancement Save eWS Default to No	eWorksheet application has been enhanced to support "Complete eWorksheet" functionality and have the default option on "Save Dialog" as "No"
21.	Add ability to leave eWorksheets locked for cells containing macro/formula/code	eWorksheet application has been enhanced to leave eWorksheets locked for cells containing macro/formula/code

22. eWorksheet - upload results even if upload sheet SIDN column in "Upload Sheet" contains non sample number of the provided successfully number of the worksheet of the provided successfully eworksheet of specific location (other than the configured "Starting cell address") in the right-hand side eWorksheet spiplication has been enhanced such that user will be able to populate the selected sample on a specific location (other than the configured "Starting cell address") in the right-hand side eWorksheets - Turn off screen update when populating audit with sum from UI for one sheet in workbook with the provided the selected sample on a specific location (other than the configured "Starting cell address") in the right-hand side eWorksheet application performance has been enhanced worksheet than seven enhanced to display Container ID 25. eWorksheet Template - Edit xism from UI for one sheet in workbook 26. LW Client-Install/uninstall Script 27. LWinventory ability to transport only a fraction (specific quantity) of a stock item. 28. LW Client-Install/uninstall Script 29. Add ability to select or deselect ALL parameters for MC test in Data Viewer 30. LWMultiComponentTransfer: Update MDL and PGL based on Dilution Factor changes 31. Allow user to see list of PR2 records in LABWORKS database when saving prelogin groups 32. QAQC Batching Query/Display in Data Viewer 33. LWALURICOMPONERS allowed the sample of the current Pre-login Group Name while saving the pre-login group 34. Lidense Court exceeded locks all connected users 35. Audit old value and new value of long text when changing omerents in LABWORKS 36. LWEXPLORER - Print Comments 37. Audit Old value and new value of long text when changing omerents in LABWORKS 38. LWEXPLORER - Print Comments 39. LWinventory Prone number in Explorer 39. LWinventory Prone number in Explorer 39. LWinventory Management - Add Manufacturer picklist available in the termstock table 40. LWinventory Management - Filter with "Contains" in steed of "Starts with" Contai			
23. eWorksheet - Adding samples to eWorksheet to specific location able to populate the selected sample on a specific location (other than the configured "Starting cell address") in the right-hand side eWorksheets - Turn off screen update when populating audit eWorksheet pane eWorksheet pane eWorksheet application performance has been enhanced to worksheet manupate - Edit xism from UI for one sheet in workbook explication based on "EWRKSHTEMEPXCEL" privilege eWorksheet Template Ewilder has been enhanced so that eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Excel can be directly edited from the eWorksheet Template Builder has been enhanced to add the ability to transport only a fraction (specific quantity) of a stock item. 29. Add ability to select or deselect. ALL parameters for MC test in Data Viewer 30. LWMutliComponentTransfer: Update MDL and PQL based on Dilution Factor changes 31. Allow user to see list of PR2 records in LABWORKS database when saving preloging groups 32. QAQC Batching Query/Display in Data Viewer 33. LWAuthentication – generate error when FIPS compliant requirement is not met. 34. License count exceeded locks all connected users 35. Audit old value and new value of long text when changing comments in LABWORKS possible to enter characters in addition to numbers 36. LW EXPLORER - Print Comments 37. Add QA/QC batch number in Explorer in LABWORKS possible from the secondary Result from LWExp_District on enter characters in addition to numbers 38. Viewing the Secondary Result from LWExp_District on enter characters in addition to numbers 39. LWInventory Management - Filter with "Contains" instead of "Starts wit	22.	column contains non sample	
eWorksheet to specific location (other than the configured "Starting cell address") in the right-hand side eWorksheet same eWorksheet pane eWorksheet same eWorksheet pane eWorksheet has been enhanced to display Container ID 25. eWorksheets - Turn off screen update when populating audit eWorksheet has been enhanced has been enhanced to display Container ID 26. eWorksheet Template - Edit xism from UI for one sheet in workbook and the worksheet Template Excel can be directly edited from the application ya fraction (specific quantity) of a stock item. 27. LWinventory ability to transport only a fraction (specific quantity) of a stock item. 28. LW Client-Install/Uninstall Script Ly Client-Install/Uninstall Script automated install/uninstall and upgrade LW Inventory Management application has been enhanced to add the ability to select or deselect ALL parameters for MC test in Data Viewer 30. LWMutliComponentTransfer: Update MDL and PQL based on Dilution Factor Changes 31. Allow user to see list of PR2 records in LABWORKS database when saving prelogin groups 32. QAQC Batching Query/Display in Data Viewer 33. LWAuthentication — generate error when FIPS compliant requirement is not met. 34. License count exceeded locks all connected users or view and update the current Pre-login Group Name while saving the pre-login group from the should get a warning message "The maximum number of Licenses are currently in use". Already logged-in users should not get any message and the 11th user tries to login then he should get a warning message "The maximum number of Licenses are currently in use". 43.	LW Login - Entering Comments	LW Sample Login has been enhanced so that user can click the comments button and directly enter in the text
44.	Sample Login - Add the capability for the Picklist for a field to be a combo/edit field	LW Sample Login application has been enhanced to add the capability for the Picklist for a field to be a combo/edit field
45.	Limit selection of databases to configured databases in Webtop	LW WebTop application has been enhanced so that during login LABWORKS databases available for selection are displayed as per the database configuration in SYSCFG
46.	LWWebtop - Request option to turn autocomplete off for password.	LWWebTop has been enhanced to add an option "PasswordAutoComplete" in web.config. It can be used to turn on or off the auto-complete functionality
47.	MCSelect6 - Filtering and Sorting Options.	MCSelect application has been enhanced to support filtering and sorting options
48.	MultiSample Login : Expand Multicomponent	MultiSample Login application has been enhanced to display a list of analytes related to the selected Multicomponent
49.	MULTI-SAMPLE LOGIN - Create/Modify PR2 files	MultiSample Login has been enhanced to support creation/modification of PR2 files
50.	Turn on / off FIPS compliance via configuration parameter.	LABWORKS has been enhanced to turn on / off FIPS compliance via configuration parameter
51.	Attach Multiple Files to Sample or Analysis in Results Entry.	Result Entry - Sample Object Management has been enhanced to support attachment of multiple files to Sample or Analysis
52.	OPCEXP6 ability to export non numeric results	OPCEXP6 has been enhanced to allow for export of non-numeric results
53.	Import Container IDs through PostResults6.	Post Results 6 has been enhanced to support importing of Container ID
54.	PostResults6 - Posting Replicate to be Reportable Result.	Post Results 6 application has been enhanced to support posting of replicate as reportable result
55.	PostResult6 - Posting Violations.	Post Results 6 application has been enhanced to support posting of violations
56.	Allow comment import from Post Result 6 on analyte level.	Post Results 6 (PR6) application has been enhanced to allow comment import at analyte level
57.	PostResults6 - Excel calculation error - Next file fails to load	PostResults6 application has been enhanced so that excel calculations are performed as expected.
58.	Adding MCSelect6 option to ProcessScheduler - Analysis Display	Process Scheduler application - 'Analysis Display' view has been enhanced so that MCSelect6 option is available for selection
59.	Process Scheduler - Filters for Columns in Grid	Process Scheduler application has been enhanced to support filtering of the grid columns
60.	PS Sample Receipt Attach COC Persisted Group Button and	Process Scheduler application has been enhanced so that user can attach scanned COC to a group of samples during sample receipt.
	Receive Samples Even if Not All Containers Received.	Also the application has been enhanced so that samples can be received even if all containers are not received.
61.	PS Schedule - Add Designated Printer to schedule setup, Print from Service	Process Scheduler has been enhanced to add designated printer to schedule setup and print to the selected printer
62.	Process Scheduler - Scheduled Time Frequency Logic improvement	An enhancement has been made in Process Scheduler application such that it is possible to add an extra analysis for a weekly Timed group frequency e.g. 1st Wednesday of Month
63.	Process Scheduler - List to Select Multiple COC Report Formats	Process Scheduler application has been enhanced so that user can view and select from Multiple COC Report Formats
64.	RESULT/ANALYSIS – Preparation Date/Timestamp	LABWORKS has been enhanced to support Analysis Preparation Date Time
65.	Integrating MCSelect and LWQAQCBatchBuilder.	LW QA/QCBatchBuilder application has been enhanced so that the filtered analytes from the samples are applied to the QC Samples that are created during the batching process
66.	QAQC Batching - SIMC Load Calculations can slow down batch creation	QA/QC Batch Builder application has been enhanced to improve batch creation performance
67.	QC Batching General Enhancements	QA QC Batch Builder has been enhanced so that Batch Description is displayed instead of the Batch ID in the Existing tab and Inventory

		Units column is added
68.	QC Batching - Multiple sets of qc samples	QA QC Batch Builder has been enhanced to support multiple sets of QC samples
69.	QC Batching - Move Ellipse to left and auto open	QC Batching Application has enhanced usability when a sample is selected to be the QC sample for the batch
70.	Importing replicate data always increments number of replicates and no default is used for previously logged analysis	A system wide default setting "DEFAULT_REPLICATE_POLICY" has been added for the default Replicate Policy in SYSMGR and added functionality so that empty replicate rows are filled before appending new replicate rows
71.	Add Validation User to Results Entry Mult-comp Edit Screen	Result Entry application has been enhanced to display Validation User and Validation Date on Multi-component Edit and Single Component Screens
72.	Result Entry - Analysis Code Sub-filtering	Results Entry application has been enhanced to display only the analysis codes assigned to samples based on "Filter by analysis assigned" configuration in Result Entry setup
73.	Improve Calculation Performance	Results Entry application has been enhanced to improve the calculation performance
74.	Add option for specifications to be =>=< OR <> only	Specification definitions have been enhanced so users are given more control over the specifications, allowing them to specify which conditions to be used for each specification (e.g. > vs >=)
75.	Result Entry Replicates Ability to select the latest replicate for In Process Control	Results Entry application has been enhanced to have the ability to select the latest replicate as result for In Process Control
76.	Attachments - link to web page in addition to file attachments	Sample Attachments have been enhanced to support link to web pages as well
77.	SAMPLE MODIFY - Update Analysis Order	Sample Modify application has been enhanced to allow the user to update the analysis order
78.	Sample modify ability to lock the Location code field	Sample Modify has been enhanced such that fields can be locked based on the configuration
79.	Sample Modify – Display prompt when there is data type mismatch for datetime field	Sample Modify has been enhanced such that User Fields having data type as "datetime" are validated
80.	SAMPLE MODIFY - IES CSV file	Sample Modify application has been enhanced to create files to record sample deletion and modification activities
81.	Zip Reports - Add to My Reports instead of Favorites	Zip Reports application has been enhanced to display the context menu as "Add to My Reports" instead of "Add to Favorites"
82.	NGII - WW SCADA Interface	NGII interface has been developed: WW SCADA Interface
83.	NGII - Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System: Support XLS format	NGII interface has been developed to support XLS format: Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System
84.	NGII - Perkin Elmer Clarus 580 GC (NEA)	NGII interface has been developed: Perkin Elmer Clarus 580 GC (NEA)
85.	NGII - Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System	NGII interface has been developed: QuantStudio 6 Flex Real-Time PCR System
86.	NGII - Agilent GC	NGII interface has been developed: Agilent GC Instrument

LABWORKS 6.9.

What's New 6.9

New Features:

Sr.No	Item	Description
1.	Support for CMDP	Support has been added for electronically submitting CMDP (https://cmdp.zendesk.com/) compliance reports.
2.	Add option to add/edit fields shown in SAMPSELCOMP6.OCX when samples are selected	Sample Selection Dialog used across LABWORKS application has been enhanced so that the fields displayed in the dialog can be selected via configuration.
3.	Chem Inventory - Purchase Requisition Refinements	In LWInventoryManagement application, "OVRD_EXP_DATE" privilege has been changed to "CINV_OVRD_EXP_DATE"
4.	Sample Login - Date/time picker	Sample Login date/time fields have enhanced usability
5.	CRGEN- Report Output Folder Enhancement	CRGEN has been enhanced to allow more control over which folder to store the report in, including support for nested folders.
6.	Add sort option to Process Scheduler login from ready to collect	Process Scheduler now allows you to right click on a "ready to collect" sample and sort the spreadsheet used to edit sample fields.
7.	Inventory Management - Edit Quantity during Mixture Creation	Inventory Management application has been enhanced to allow the user to enter the actual quantity used during Mixture creation.
8.	Sample Management - automatically calculate turn- around time	DataViewer application has been enhanced to display Sample Turn-Around Time
9.	USERHEAD.INITIALS field size increase to accommodate LDAP authentication	LABWORKS has been enhanced to support LDAP authentication for LDAP User IDs upto 256 characters
10.	Instrument Maintenance And Calibration (IMC) automatic warning email and automatic disable past due M/C instruments	Instrument Maintenance and Calibration application has been enhanced to support sending automatic warning email messages and disabling instruments for which maintenance/calibration due dates are elapsed.
11.	Allow users to set Process Scheduler initial status from new sample login	It is now possible to set Process Scheduler initial status from LWSampleLogin. System Manager SHOW_STATUS needs to be checked.
12.	Inventory - Add multiple of the same item in single operation	A new feature is added to support receive batch of inventory item.
13.	Process Scheduler - request username and password for data entry	Process Scheduler has been enhanced to request username and password for data entry
14.	Multicomponent Select (MCSelect6) addition to Process Scheduler Right Click	Added new SHOW_MCSELECT = YES to Process_Scheduler
15.	Sample Modify - configurable default update due date option	Sample Modify application has been enhanced to support configuration of the default update due date option e.g. "Always", "Never", "Prompt"
16.	eWorksheets - miscellaneous improvements	eWorksheet has been enhanced to configure in the template and validate the cells that must have values before being posted
17.	Filter by Department(s) for Analysis Validation	Application has been enhanced to support filtering by Department in Sample Selection dialog for 'Analyses Awaiting Validation' option.
18.	Process Scheduler scheduled groups are converting selected order of location codes to alphabetical order	Process Scheduler has been enhanced to display scheduled groups as per the order of location codes
19.	MULTI-SAMPLE LOGIN - Copy and Paste Support	Multi Sample Login has been enhanced to provide copy-paste support
20.	Optimization around LABOBJSPECINFO,	LABOBJSPECINFO, LABOBJMAILLIST performance has been optimized

	LABOBJMAILLIST	
21.	eWorksheet - Completed changed back to In Progress	eWorksheet application has been enhanced to allow the user to change the status from Completed back to InProgress
22.	Result Entry - Sample Object Attachments	Result Entry application has been enhanced so that user can select the Sample Object Attachments from any folder available in the network.
23.	LWExplorer not showing time for user fields of datetime type	LWExplorer has been enhanced to display date as well as time for user fields of datetime type
24.	Spec Info Change Value Update Batch	QA QC Batch Builder has been enhanced to display the Update Batch button if a change is made to a previously created batch and a value in one of the Special Info Form fields is changed
25.	Restricting PS Sample Edit	An improvement has been made to implement "PS Sample Edit" privilege for restricting PS Sample Edit to privileged users
26.	Explorer .NET History - Form Resize doesn't resize contents	Improvement has been made in Explorer .NET History form to resize contents after resizing the form
27.	Result Entry- Start Date > End Date Prompt	In Result Entry application, Analysis Start Date > Analysis End Date message prompt is now displayed on click of "Save" button
28.	Add ability to group Prelogin group records in LABWORKS database	Added ability to group Prelogin group records in LABWORKS database
29.	Component Result Entry: "Save/Next" button that automatically brings up the next item	Result Entry application has been enhanced to navigate to next Sample/Analysis Code directly from Component Result Entry screen for Multi-Component Analysis
30.	UX Improvements	UX improvements have been implemented for Result Entry, Multi- Sample Login applications
31.	Login date request for Process Scheduler	A bug has been fixed so that in Process Scheduler the collection date is maintained as it is upon right-click on the samples to login.
32.	eWorksheet enhancements	eWorksheet application has been enhanced to support Excel Macros, pick up Sample List from QA QC Batch, import Sample Header information, prompt Audit Reason and eSignature
33.	SPECINFO/LABOBJSPECINFO TABLE	LABWORKS application has been enhanced to support SPECINFO table from previous versions
34.	Replicate Management - enhance audit trail capture	Replicate Management forms have been enhanced to capture more audit trail data.
35.	Analysis Maintenance - Load button size not consistent with other buttons	Analysis Maintenance Load from Analysis button size is enhanced to be consistent with other buttons
36.	LABWORKS Explorer - Apply Design Guidelines	Design guidelines have been applied to LABWORKS Explorer application to improve the usability
37.	DataViewer - miscellaneous improvements (feedback from 2017 User Conference)	DataViewer application usability has been enhanced by displaying the sample comments and by providing enhanced result sorting functionality
38.	NWA - Add option to plot RawResult	SQC application has been enhanced to display Raw Result in NWA chart based on the configuration
39.	ProcessScheduler - Improve Edit Schedule for large number of items	Performance of Process Scheduler - Edit Schedule functionality has been improved to support large number of items
40.	Batch Ownership	"My Templates" tab has been added in QA QC Batch Builder to provide a filtered view of templates for batch creation
41.	Trend Plot - Add option to plot RawResult	An improvement has been made for the user to select the Y axis label as Raw Result for the Trend Plot
42.	NGII QuantStudio 6 qPCR	NGII interface has been developed : QuantStudio 6 qPCR
43.	NGII Interface PKI Optima 7300 ICP	NGII Interface has been developed : PKI Optima 7300 ICP
44.	NGII Development - MASS DOH Sciex QTOF	NGII Interface has been developed : MASS DOH Sciex QTOF
45.	NGII Interface Thermo IC XLS	Added support for new interface: Thermo IC XLS
46.	NGII Interface CNL Mettler EasyDirect	NGII Interface has been developed : Mettler EasyDirect

47.	NGII Interface Waters Empower	New NGII Interface developed: Waters Empower ARS Interface	
	ARS		

What's New 6.8.5

Item:	Internationalization Support
Description:	A bug has been fixed where LocalText data in the translation table was being cut at 50 characters.
Item:	Pre-login group save: displays the list of existing ones to avoid duplication
Description:	On clicking Save Pre-Login group, we now automatically display loaded 'PreLogin group' in the
	drop down for PreLogin Group Name.
F	
Item:	Entering QA batch data using a file
Description:	Documentation has been added to explain how to import QA batch data using a file.
Tr	On a right late was attent. From the Arabasis On do not from the right of Decodes Forty.
Item:	Special Information Form for Analysis Code not functioning at Results Entry
Description:	A bug has been fixed where the special information form for analysis codes was not functioning in
	results entry.
Item:	Audit Trail reasons - back to newest at top
Description:	Audit Trail has been enhanced to sort by newest reason on top by default.
Boscinptioni	та по
Item:	New QC Batching Display with Oracle DB
Description:	A bug has been fixed where some users would get a blank screen while trying to create a new QC
2 000p	batch in our new QC batch builder application.
Item:	Single Component Instrument Interface PR6 File with previous results
Description:	A bug has been fixed in PostResults6 where input files from single component instrument
2 occupacin	interfaces with records for multi results of samples were not being.
	·
Item:	Update Mobile Sample Collector documentation with a troubleshooting section
Description:	A troubleshooting section has been added to our Mobile Sample Collector documentation to
	capture common connection errors.
	Data in a set onia Dantono and Dantono and marking ANALYCIO table DADLIEDATE O
Item:	Data imports via PostScr6 and PostMcr6 overwriting ANALYSIS table RADUEDATE & ADUEDATE fields
Description:	A bug has been fixed in PostScr6 and PostMcr6 where data imports from those applications were
Description.	overwriting fields RADUEDATE and ADUEDATE of ANALYSIS
Item:	Applications get lost in the screen
Description:	A bug has been fixed where application screens would get lost in the screen when going from a
	multi-monitor setup to a single display setup.
	December 1 Table in Full Time / Deat Time and invested 12 of 1
Item:	Personnel Training FullTime/Part Time are inverted in the reports.
Description:	A bug has been fixed where full time and part time information was being erroneously reported in
	Personnel Training reports.
Item:	LABWORKS EXPLORER- Template Configuration\Sample Comments
Description:	LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view
2000 iption.	columns.
Item:	SQC Charts from COA not updated for NWA 6.2
Description:	SQC Charts from COA have been updated to work with NWA version 6.2.

Item:	PostResult 6 not posting RLTSOURCE to LABWORKS
Description:	A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.
Item:	MOR report - add macro function similar to excel calculation setup
Description:	A macro function has been added to the MOR reporting tool.
Item:	LWDataServices - Scandaemon app not performing all Excel Calculations - United Soils
Description:	A bug has been fixed in 6.7 where Scandaemon was not performing all Excel Calculations.
Item:	ALLOW_CALC_RESULT_MANUAL_ENTRY function changes Undo
Description:	Manual data entry of CALC codes can now be locked out by setting SYSMGR key
	ALLOW_CALC_RESULT_MANUAL_ENTRY to 0.
Itomi	DataViewer Copy (Ctrl+C) SampleID for further usage (CopyResult)
Item:	A bug has been fixed in dataviewer where the copy / paste sample id results was not working
Description:	properly.
	propony.
Item:	CRGEN and Mail List Max email recipients 9
Description:	CRGEN has been enhanced to increase the mail list limit from 9 to 100 email recipients.
2 000р	
Item:	My Preferences issue on LWDesktop Menu
Description:	A bug has been fixed where LWDesktop would not properly load or display the menu when
2 000	configuring the user's Desktop menu under My Preferences.
Item:	Sample Collection App- Collection Date Picker
Description:	A bug has been fixed in the mobile sample collection app, where the system date/time would be
	used for the collection time instead of the selected date/time.
Ita as	Comple Collection Ann. DC Status
Item:	Sample Collection App- PS Status
Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect"
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect"
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation.
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry
Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from
Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry
Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry.
Item: Description: Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry. Possibility to have a default string result like "Not Detected" for single components analysis
Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry. Possibility to have a default string result like "Not Detected" for single components analysis It is now possible to specify a default result string (e.g. "Not Detected") for single component
Item: Description: Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry. Possibility to have a default string result like "Not Detected" for single components analysis
Item: Description: Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry. Possibility to have a default string result like "Not Detected" for single components analysis It is now possible to specify a default result string (e.g. "Not Detected") for single component analysis.
Item: Description: Item: Description: Item: Description: Item: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Units with number in leftmost character position do not copy from analysis code to result entry A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry. Possibility to have a default string result like "Not Detected" for single components analysis. It is now possible to specify a default result string (e.g. "Not Detected") for single component analysis.
Item: Description: Item: Description: Item: Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect" Sample Collection App- Creating collection group in PS Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation. Description:	Data Viewer now allows for better selection/view options in analysis list.
Itami	Porcoppol Training not filtoring Popult Entry
Item:	Personnel Training not filtering Result Entry Results Entry has been enhanced so that analysts cannot enter data for analysis they have not
Description:	been approved / certified for.
	Soon approved / Continue for
Item:	Allow selection of multiple analyses per trainee in Personnel Training
Description:	Results Entry has been enhanced so that analysts cannot enter data for analysis they have not
·	been approved / certified for.
Item:	Personnel Training not filtering Result Entry
Description:	Added functionality to select multiple analysis per trainee using CTRL or SHIFT.
Itomi	Multicomponent multiple partial regult entry without regult modify privilege
Item:	Multicomponent multiple partial result entry without result modify privilege A new privilege has been added to control whether result merges (RESULTMERGE) can be
Description:	performed while importing data using Multi Component Transfer.
	performed mails importing data doing mail component fluidion.
Item:	Process Scheduler Assign analyst should be filtered according to Personnel Training data
Description:	Assign Analyst and Assign Instrument in Process Scheduler is filtered according to personnel
	training and Instrument Maintenance and Calibration data.
Item:	New Sample Login- Crashes after uploading collected group
Description:	A bug has been fixed in LWSampleLogin where it would crash while uploading a collected group
	from the Mobile Sample Collection App.
Item:	Replicate Management Enhancements
Description:	Replicate Management now posts replicate results even if some of the selected replicates contain
Description.	a null value (the empty values are simply not taken into consideration during the post).
	, , , , , , , , , , , , , , , , , , , ,
Item:	AutoLogin640 PQL Value Not Posting
Description:	A bug has been fixed in AutoLogin640 where the PQL value was not posting correctly.
Item:	PR6 Storing Calculated Results Bug
Description:	A bug has been fixed in PostResults6 where results were being posted but not calculated.
-	
Item:	Sample Modify - Analysis Order
Description:	A bug has been fixed in Sample Modify where removing and adding samples, the analysis
	ordering would sometimes get mixed up when there were duplicate values for the same ANUM.
Item:	PROCESS SCHEDULER - PS status colors by analyses
Description:	Process scheduler status colors have been updated to use the updated color scheme for sorting
Description.	by analysis.
Item:	Replicate Management - getting CALCFROMREP as custom result
Description:	Replicate management has been enhanced so that a tooltip message is displayed to the user and
·	a message is logged to the error log when values under the MDL range are posted.
Item:	PostResults6 - silently closing when bad parameters are specified
Description:	PostResults6 has been enhanced to display an error message when bad parameters are detected.
It a res	Doot Dooulte: MODE CHILT COND not combine if MDL is in COV (5)-
Item:	PostResult6 - NORESULTCOND not applying if MDL is in CSV file
Description:	A bug has been fixed where if MDL was in CSV file, PostResults6 (running from scandaemon as service) with NORESULTCOND would compare result with MDL and if it was less than MDL it
	would not post raw data.
	· · · · · · · · · · · · · · · · · · ·

Item:	AutoQualifier6 returns the string "Null" after removing an illegitimate qualifier
Description:	A bug has been fixed where if a user entered an auto qualifier field in results entry and that value
	was not needed when applying autoqualifier6, then that value would be overwritten with null.
Item:	Enhance analysis reference input to use a picklist instead of a free form input
Description:	Analysis reference input has been enhanced to use a picklist instead of a free form input to reduce
Description.	user error.
	400.01.01.
Item:	eWorksheet Operation Items - WYDEQ
Description:	Two bugs have been fixed in eWorksheets where data was not being properly stored / loaded, and some common excel functions would not work under certain circumstances.
Item:	Process Scheduler - Resources Tab - messed up display when different users have the same name
Description:	Process scheduler has been enhanced to better handle the display of different users with the same first and last name under the resources tab.
Г .	
Item:	Replicate Management - Date set from policy to 12/30/1899
Description:	A bug has been fixed in replicate management where the replicate date set from policy was defaulting to 12/30/1899.
Item:	PS Sample Login limit the Coll Date to calendar input
Description:	LWSampleLogin has been enhanced to allow admins to limit the collection date to calendar input
Description.	to minimize the risk of wrong date entry by using VALID_DAYS_BACK and VALID_DAYS_FORWARD setup parameters.
14	Leave with displaying DOL in Deculte Fator
Item:	Issue with displaying PQL in Results Entry A bug has been fixed where if MDL was in CSV file, PostResults6 (running from scandaemon as
Description:	service) with NORESULTCOND would compare result with MDL and if it was less than MDL it would not post raw data.
Item:	PostResult6 - NORESULTCOND not applying if MDL is in CSV file
Description:	A bug has been fixed in Results Entry where PQL would only display the first 8 characters instead of its full length string.

Item:	QA Batch Workflow Management Issue
Description:	A bug has been fixed in the QA Batch Workflow Management, where batches would get reported with a draft state instead of the expected pending state.
	with a draft state instead of the expected pending state.

Item:	When parsing results for elements that have multiple isotopes. The second element isotope result is being doubled
Description:	Bug fixed when parsing results for elements that had multiple isotopes, the second isotope result would be doubled.
Item:	Result Entry import of PostResult6 CSV format does not import dates/times
Description:	An issue has been resolved in issue in the Legacy interface for instrument type PR6 (.CSV) (Lwbz107_6.exe). When input PR6 file contained no data in last comment, the interface would not load results for the analysis.
Item:	COA Headers erasing in database when editing header cells/custom forms
Description:	A bug has been fixed where Excel COA form fields would come up blank in the UI and then get overwritten as blank during a save.
	overwritterr as plank during a save.
Item:	LWMultiComponentTransfer does not parse file which contains single quote in File name.
Description:	Bug fixed where LWMultiComponentTransfer was not properly parsing files with single quotes in
Description.	filename.
Item:	Spec Info Tab Order
Description:	A bug has been fixed where the Spec Info form tab order was not being honored as defined in the
Booonpaon	designer.
Itami	AutoQualifier Pug in 6.9
Item:	AutoQualifier Bug in 6.8
Description:	AutoQualifier logic has been revised and improved.
Item:	Sample Collection App - login record file being lost after receiving collection group
Description:	A bug has been fixed where the login record file was being lost after receiving samples back at the lab from the mobile collection app.
	Tab Hoff the Mobile Collection app.
Item:	Standard calculations do not complete but Excel calculation with same formula work
Description:	A bug has been fixed where standard calculations were not being properly calculated.
2 000р	
Item:	QC Batch Error with ColDate Displayed
Description:	A bug has been fixed where the QC batch template would not display samples if one of the columns was "Collection Date" or "Submit Date".
Item:	POSTRESULTS6 exporting result file source using Excel format
Description:	POSTRESULT6 has been enhanced to allow for importing of the RLTSOURCE field when
'	processing excel files.
Item:	LABWORKS calculations not firing and slow down loading result entry.
Description:	A bug has been fixed where LABWORKS calculations were not properly firing and result entry was
2000.1011.	loading very slow.
Item:	Process Scheduler - can't read white on yellow
Description:	A bug has been fixed in Process Scheduler where some white text was being displayed on top of a
Description.	yellow background, making the data unreadable.
I to one .	ExportDate only works with one attached chiest
Item: Description:	ExportData only works with one attached object A bug has been fixed where ExportData was only exporting with one attached object.

Item:	Newly created Batch is in NULL status. Workflow Architect has no such status.
Description:	A bug has been fixed where newly created QAQC batches would end up with a null status after they were created.
Item:	Sample Modify Due Time Issue
Description:	A bug has been fixed in Sample Modify where it was not properly saving due time updates.
Item:	Postresults6 not firing Excel calculation
Description:	A bug has been fixed in PostResults6 where it was not properly firing Excel calculations.
Item:	Allow users to set Process Scheduler initial status from new sample login
Description:	It is now possible to set Process Scheduler initial status from LWSampleLogin.
Item:	In current 6.8 update, I see records for eWorksheet workflow, but they don't show up in Workflow Architect.
Description:	A bug has been fixed in Workflow Architect, where eWorksheet workflow template was not showing up in architect.
10	Outsin LADWORKO Outsidefine De Net Outside (15 No. 1)
Item:	Certain LABWORKS Calculations Do Not Calculate and Forces Module Into Not Responding
Description:	A bug has been fixed in 6.8.0.318, where certain LABWORKS calculations were not triggering and the analysis maintenance module would stop responding during configuration of calculations.
	the analysis maintenance module would stop responding during configuration of calculations.
Item:	Analysis calculation with a zero value
Description:	A bug has been fixed where a zero calculation caused Labworks calculations not to run.
Description.	77 bug had book index where a 2010 dalodiation database Labworks dalodiations not to fulfi.
Item:	CAS Number (CASN) Field Not Exporting
Description:	A bug has been fixed where the CAS number was not being properly exported when exporting
Doddinpilon.	samples or generating crystal reports.
Item:	New Sample Login # Tests Due Date Not Populating
Description:	A bug has been fixed where #test due dates was not properly being populated.
Item:	COA - Limit COA History Range

What's New 6.7

Item:	ResultUnits not available for XLCalculation input or output
Description:	Excel Calculations in LABWORKS Now support Analysis Units for Export and Import
Description:	Exoci Calculations in Exerverthe New Support Alianysis Chile for Export and Import
Item:	CUST-RPT: Bug - LWExplorer DotNet, to not have the first row in results appear to be selected
Description:	LWExplorer doesn't highlight the first row of results after selecting a sample. Previously, with the first row of results contained a specification violation, the row being highlighted would not show the violation color.
Item:	CUST-RPT : Bug - To compile/configure Single and Multi-Sample login pages to load wher bartender isn't installed
Description:	LABWORKS Webtop can be install without Bartender Installed on the server. If the LABWORKS Webtop isn't going to be using Bartender for printing labels, Bartender doesn't need to be installed.
Item:	Cust-RPT: Bug- PR6 built-in calculation not performing as expected
Description:	PostResults6 has been enhanced for better performance and has issues related to Calculations and Rounding fixed. There were Labworks Calculations that without parentheses, the order of calculation wasn't as expected. Specific configurations on

	Rounding would generate and error, Object Reference not found.
	1. To all all a golforato and only object holorolloo flot found.
Item:	CUST-RPT: LWLicenseManager-LW
Description:	LWLicenseManager wouldn't display license information if the program folder was read only. LWLicenseManager was attempting to create a temporary file in the program folder. The program has been changed to not required a temporary file.
Item:	CUST-RPT: Bug - When clientapp.config isn't configured correctly Cancel button should close desktop
Description:	During installation, client setup the client copies the Clientapp.config file to the workstation program folder. Under some security settings, this file copy fails. When the Client starts up, there is now better error logging to help troubleshoot this situation.
Item:	LocList - Single quote in analysis description causes error in save resultspecs
Description:	Single quotes in analysis name/description used as specifications for a location code caused errors when saving the location code.
Item:	CUST-RPT: Bug- LWSample Login due date not updating
Description:	When using Fill Down to enter sample dates, collection or submittal, the due date didn't recalculate.
ltom:	DecultoEntry and MCVE or using DDC format would load requite if Anthlone and Anthlone
Item: Description:	ResultsEntry and MCXFer using PR6 format won't load results if AnlName <> AnlAbbr ResultsEntry loading results from a PostResults6 formatted file wouldn't load values if the Analyte Name wasn't equal to the Analyte Abbreviation.
Item:	ResultsEntry - Detailed edit, changing the DL back to 1 doesn't update calculated MDL
Description:	ResultsEntry when changing the Dilution Factor back to 1, the MDL values didn't update/recalculate.
Item:	PostResults6 - If file contains RDLF, then RMDL/RPQL are ignored and analysis MDL/PQL are used
Description:	PostResults6 when reading a data file containing RDLF (Result Dilution Factor) the imported values for RMDL/RPQL were ignored and the analysis MDL/PQL were used.
Item:	LWLaunchCrystal64 doesn't permit SelectionCriteria embedded in the report
Description:	Crystal Reports when SYSMGR CrystalVersion <> "XI", Sample Selection Criteria in the report was being ignored.
Item:	Barcode Type 8 Missing
Description:	Bartender Label Type 9 has been added. Type 9 Generates label data, when SYSMGR/USE_CONTAINER = TRUE, there is one label for each Container, with the analyses for each container based on BOTTLELIST References.
Item:	ResultsEntry manually entered date/time not using current value
Description:	ResultsEntry when entering results manually, the default behaviour is to use copy the time from one manual entry to the next. Using a new LABWORKS.INI/SpreadResultsEntry value, RESULT_TIME_USE_CURRENT = YES, each entered value gets the current date/time for its result.
Item:	Racklog format defaults to 5.8 format
Description:	Backlog format defaults to 5.8 format BackLog when generating a backlog report, the default format was Labworks 5.8 format. The default format is now Labworks 6.X format which matches fields better with PostResults6 uploading.
Item:	CUST-RPT: Bug- After Sample login userfield values do not match with the defined
	1 2 22 23 23 23 23 23 23 23 23 23 23 23 2

iteiii.	DMR FINALDETAIL.RFRQ ANL1 instead of DMR FINALDETAIL.RFQ ANL1	
Description:	DMR: Corrected Frequency of Analysis Calculation/Reporting	
Description.	DMIT. Corrected Frequency of Arialysis Calculation/Ineporting	
Item:	LWMigrationUtility - Timeout issue with AUDITTRAIL when 53M records are in	
1.0111.	the table	
Description:	Platform: Enhanced LWMigrationUtility to handle substantial number of	
	AuditTrail records	
	- National Tolorido	
Item:	Process Scheduler - Download from calendar SQL statement error with SQL	
	Server Compatibility Level older	
Description:	ProcessScheduler: Corrected SQL Error on Calendar Download.	
Item:	Results Entry - Copy Results/Paste Results sets prices to \$0 for pasted test	
	codes	
Description:	ResultsEntry: Corrected AnalysisPrice set to zero issue when copy/paste from	
	one sample to another.	
Item:	Process Scheduler - Improve color scheme	
Description:	ProcessScheduler: Improved Color Scheme. Improve usability by tuning colors.	
Г.		
Item:	DMR - Conversion Factor not applied for parameter	
Description:	DMR: Conversion factor not applied to results.	
lt a rea	OD	
Item:	ScanDaemon services needs same run program features as VB6 app	
Description:	ScanDaemonService: Add capablity to run post upload/post process programs.	
Item:	Process Schodular convice peode Possyer enties for when restorting	
	ProcessScheduler service needs Recover option for when restarting	
Description:	ProcessSchedulerService: Added option to start from last update time.	
Item:	PR6 hanged sometimes	
Description:	PR6 hanged sometimes PostResults6: Corrected issue with LABWORKS calculation that would cause	
Description.	PR6 to Hang: Properly evaluate if calculation inputs when analyses not	
	assigned to the sample.	

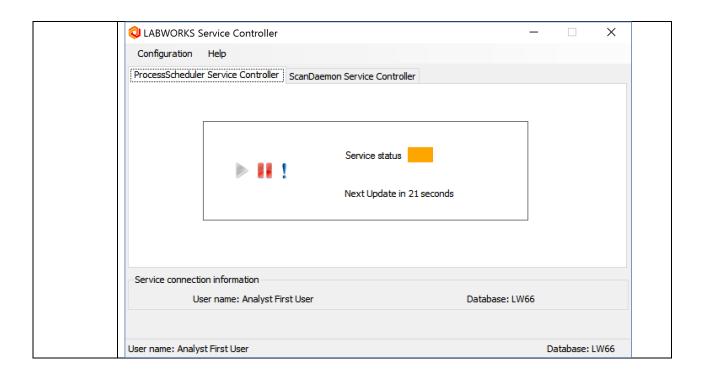

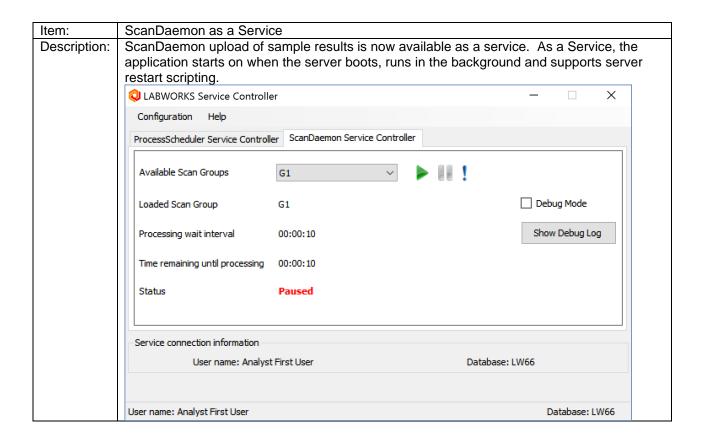

Item:	LWSYSCfg6.exe doesn't give any user feedback when trying to save		
	configuration and the syscfg.dat is write protected		
Description:	Platform: LWSyscfg6.exe Added Alert to user if SYSCFG.DAT is read only.		
Item:	PR6 Error Logging Enhancement		
Description:			
	fails.		
Item:	WebTop - Resize crystal report display to window size		
Description:	WebTop: Crystal Reports - Resize window properly.		
Item:	Sample Modify - ability to recalculate analysis on submission and completion		
	date updates		
Description: SampleModify: Added recalculation of due dates when sample collection			
date are updated.			
Item: Sample Modify. If user doesn't update field width for modified UDF, or us			
	template from previous version then data can be lost		
Description:	SampleModify: Removed requirement for user to enter field widths for fields to		
	be modified.		
Item:	Add SAP Lookup table editor		
Description:	SAP: Added User Interface for modifying Interface Lookup tables.		
Item:	PR6 needs ability to run post processing programs like OPCEXP		
Description:	PostResults6: Added POSTRUN option to run command line programs as part of		
	PR6 processing.		

What's New 6.6

Item:	Process Scheduler as a Service	
Description:	Scheduled sample creation feature of ProcessScheduler is now available as a service. As	
	a Service, the application starts on when the server boots, runs in the background and	
	supports server restart scripting.	

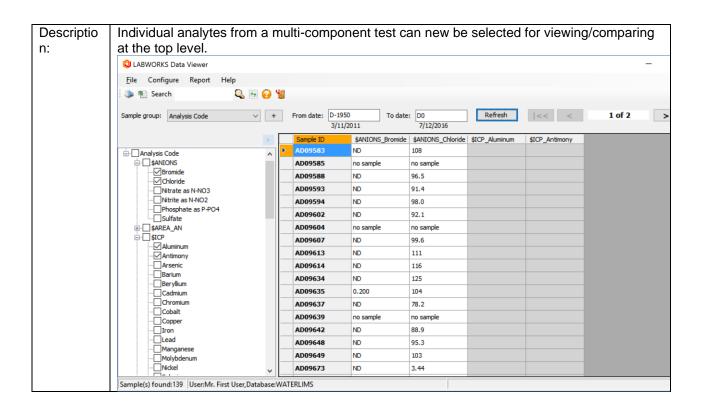

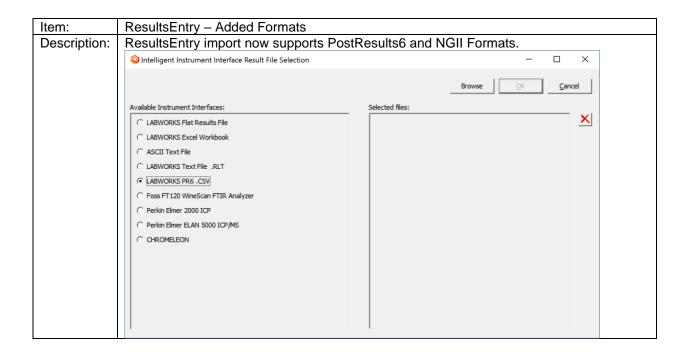

Item: LWDataViewer – Display of Multi-Component Analytes at top level

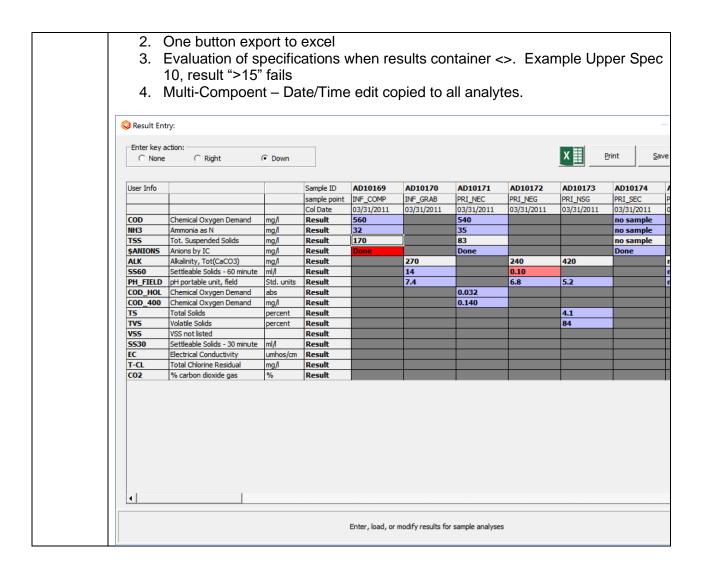

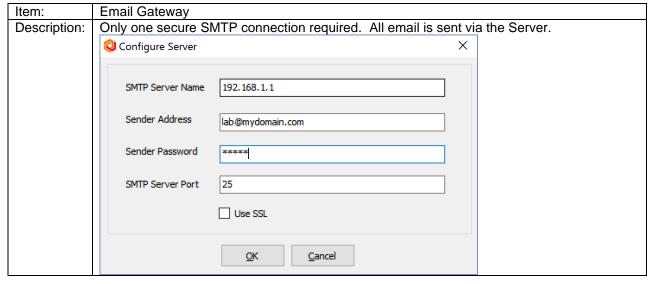

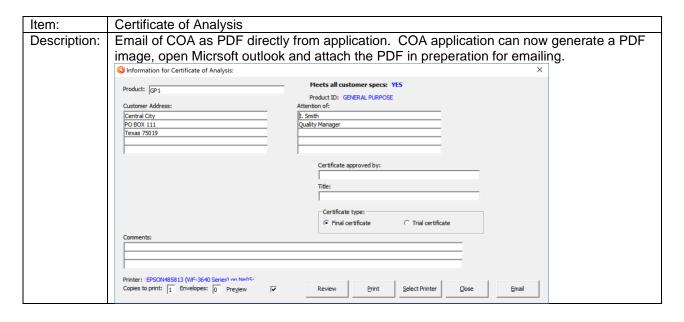

Item:	ResultEntry – Usablity		
Descriptio	Improvments:		
n:	Violations of Multicomponent Tests displayed at top level		

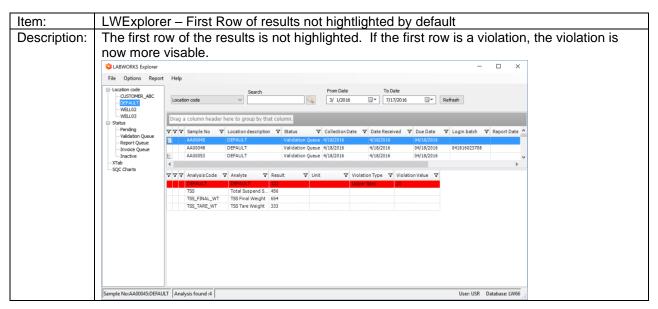

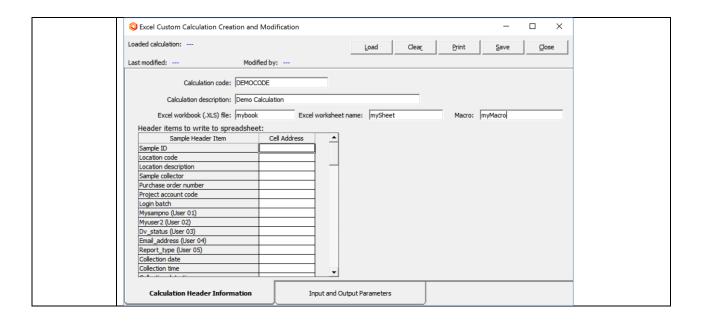

Item:	DMR – Added eDMR output, added calculation options, improved performance
Description:	Added eDMR electronic format output. Added calculation option for Max monthly value over a multiple month range. Improved sample calculation and report generation performance.

Item:	Excel Calculation – Added Macro Support, Rounding of Calculated Values		
Description:	Excel calculations can now run a macro as part of the calculation. By adding support to run		
	a macro, calculations can now include more user defined actions, such as saving chart		
	files, reading/writing external data		
	Rounding – Calculated excel values can be rounded as per analysis code rules.		
	SYSMGR/ROUND_IMPORTED_RESULTS = TRUE		

Others:

Item:	LWWebTop – SampleLogin - Removed dependnecy on Bartender			
Description:	LWWebTop – SampleLogin no longer has a hard coded dependency on Bartender. Bartedner Install isn't required on the server if bartender labels aren't going to be generated.	So		

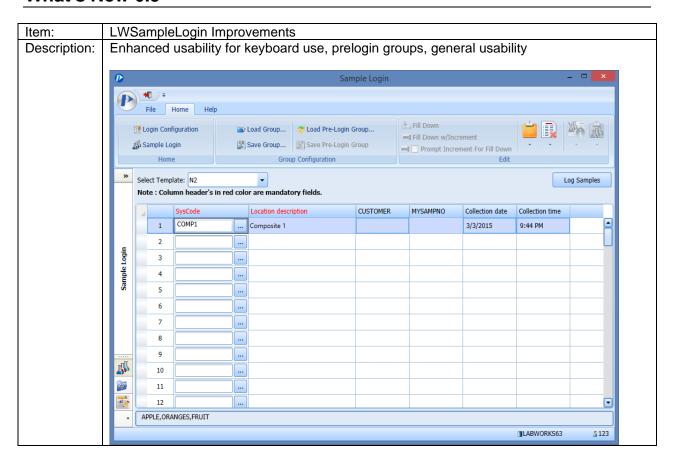

Item:	Labels
Description:	Fix to Bartender Label_Type = 3 Added Nlabels saving to SampleLogin prelogin groups
	Added Direct integration of Bartender label select to MultiSampleLogin Support Nlabels in when using Select w/ Bartender

Description: Special Info – Added support for descriptions with single quotes ProcessScheduler - Edit Analyses – Resizable, improved UI	Item:	Various
Updated Help Updated software development controls Installation – Single step upgrades from 6.X. Improved single Script and XSP file. Installation – New Code signing certificate, images, installation folders. SIMC Performance – Faster PostResults6, DMR Errorlog Viewer – Properly display when many errorlog records. Database Support – Added support for SQL 2014, 2016 O.S. – Support for Windows 10 – View Objects new PDF, JPG viewers.		Special Info – Added support for descriptions with single quotes ProcessScheduler - Edit Analyses – Resizable, improved UI Updated Help Updated software development controls Installation – Single step upgrades from 6.X. Improved single Script and XSP file. Installation – New Code signing certificate, images, installation folders. SIMC Performance – Faster PostResults6, DMR Errorlog Viewer – Properly display when many errorlog records. Database Support – Added support for SQL 2014, 2016

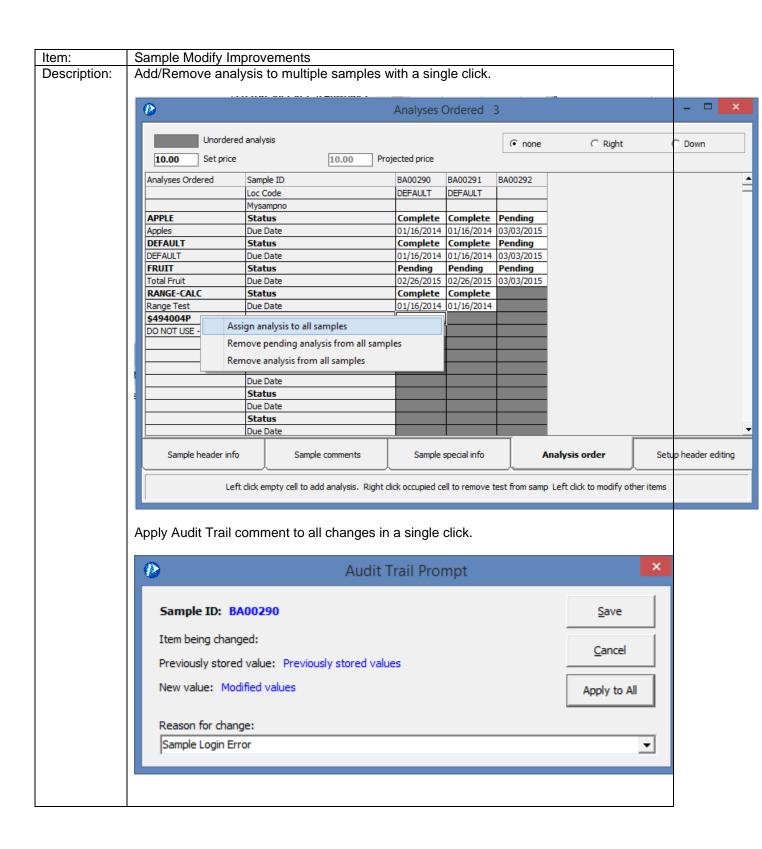

DMR - Performance, Calculation - Average hight month over extended range, eDMR

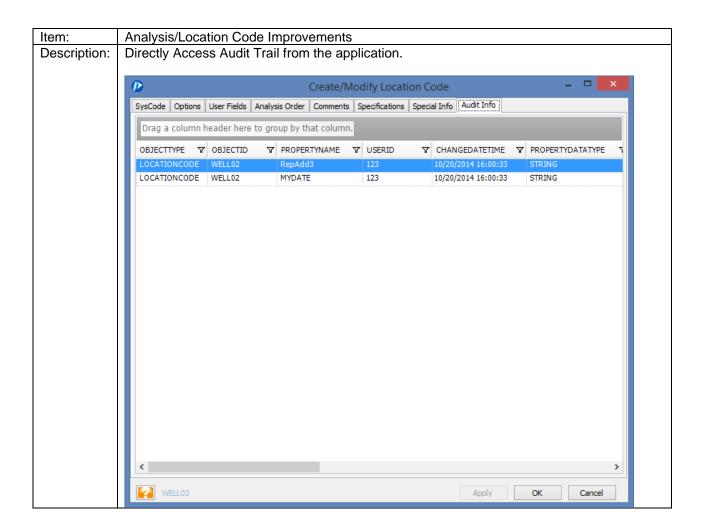

What's New 6.5

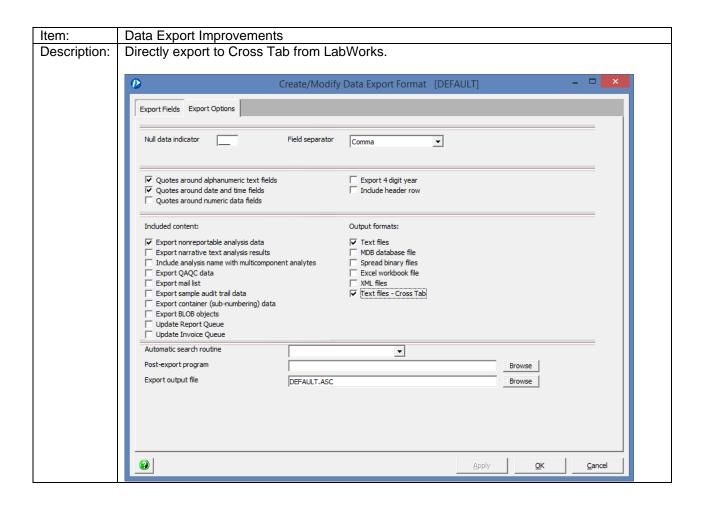

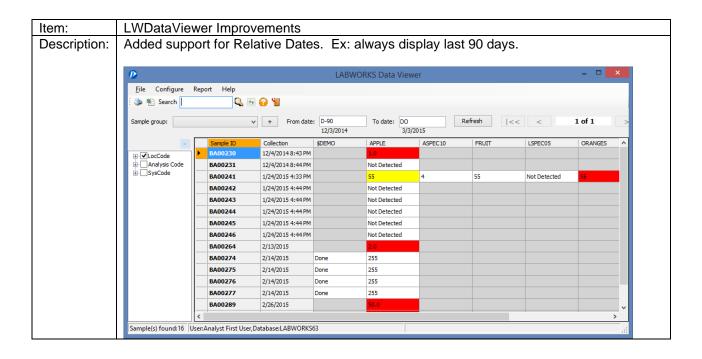

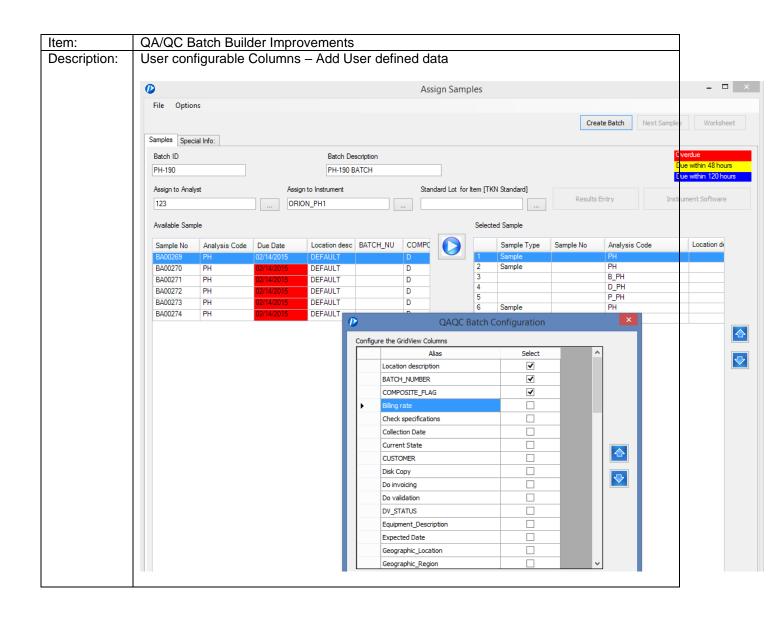

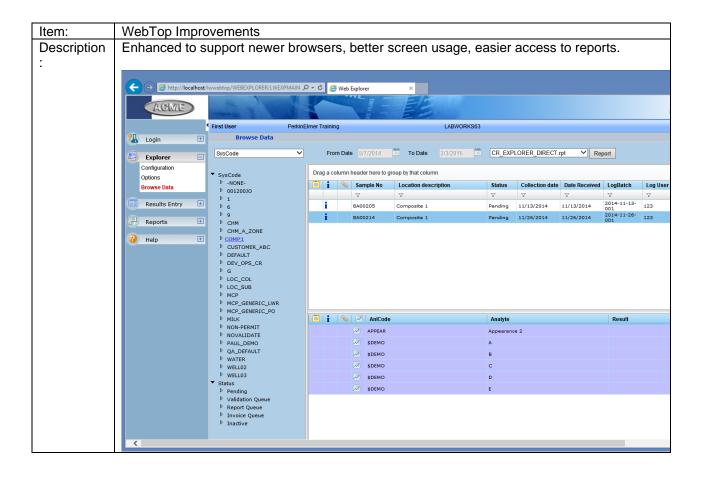

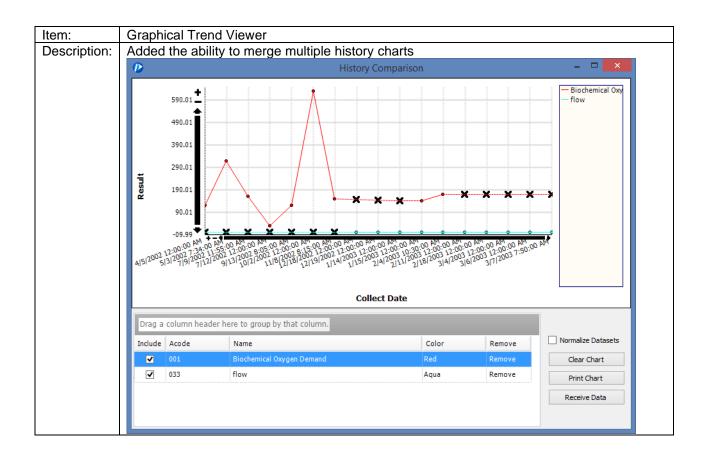

Installation Notes

The installation instructions have been updated to reflect the new features. Please refer to LABWORKS Installation Guide in the documentation folder of the CD.

Configuration Changes

Configuration changes in 7.0:

Sr N o	Configuration	Updated in	Default Value	Behaviour
1.	ADD_TO_PROCESS_SCHEDULER	SYSMGR	0	Deprecated - Adds sample to process scheduler during login
2.	ATTACH_OVER_MAXFILESIZE_AS_LINK	SYSMGR	-1	Attachments over MAX file size limit (SYSMGR setting ATTACHMENT_MAXFILESI ZE) will be added as link, if the flag is set to True.
3.	ATTACHMENT_MAXFILESIZE	SYSMGR	1059225 6	Maximum File size for the file uploaded through 'Copy' mode using document

				attachment (Default Max file size is 10 MB i.e 10592256)
4.	BULK_AUDIT	SYSMGR	0	Allow Result Entry to Audit in bulk
5.	INVENTORY_AUTOCONSUME_NEGATIV E_QTY	SYSMGR	0	Allow Consumption of Item quantity such that negative Available Stock quantity is supported.
6.	INVENTORY_GRADE_OVERRIDE_OPTI MISTIC	SYSMGR	-1	Allow Inventory data fields to be overwritten with new values upon receiving the same Inventory Item again
7.	MODIFY_ANALTENAME	SYSMGR	0	Support addition of Unspecified component in ResultEntry
8.	OVERWRITENARRATIVERESULT	SYSMGR	-1	If the setting is True, then Narrative Analysis result is overwritten. If the setting is false, the Narrative Analysis result is appended to previous result.
9.	ROUND_EXCEL_CALC	SYSMGR	-1	Apply rounding during Excel Calculation
10.	ROUND_RESULT_BEFORE_SPEC_EVAL UATION	SYSMGR	0	Round Result value before performing Spec evaluation on leave cell event in Results Entry application.

Hardware / Software Requirements

The hardware and software requirements are documented separately in the Hardware and Software Requirements document.

Upgrade Notes

There are database changes in this version to support new features. Follow the software Installation Guide for updating the database.

Fixed in this Version

Release notes include only fixes since the previous release i.e. 6.10.

The following issues were fixed in LABWORKS version 7.0:

Sr.No	Item	Description
1.	SL_VALID_DAYS_BACK & FORWARD ignored in LWSampleLogin and PSLogin	A bug has been fixed in Process Scheduler - Sample Login so that SL_VALID_DAYS_BACK & FORWARD is considered for collection date during PSLogin
2.	Samples available for batching even if already batched	A bug has been fixed in QAQC Batch Builder such that already batched samples are not available for batching
3.	Report will not update data for one Process	A bug has been fixed in Crystal Report for

		T
	Scheduler department samples	Process Scheduler such that report is generated even if MODUSER field value is null
4.	Leaving options for entering method reference off result templates can lose data	A bug has been fixed in Results Entry such that Analysis Method Reference is populated even if Method Reference is not configured in Results Entry Template
5.	View Analysis Object from Validation Module	A bug has been fixed in Sample Analysis and Validation such that Analysis Object can be viewed from Validation Module
6.	LWInventory Management, Paging of Inventory Library not working on Oracle Database.	A bug has been fixed in LW Inventory application such that paging of Inventory Library works fine on Oracle Database
7.	Sample Validation Form - Left click on Analysis Ordered column behavior	A bug has been fixed in Sample Analysis and Validation Form such that nothing happens on left clicking on Analysis Ordered column
8.	QC Batch Print Worksheet just says Print	A bug has been fixed in QA QC Batch Builder so that Print Worksheet button is enabled only if Crystal Report Template is assigned
9.	eWorksheet Post Results Field INSTRUMENT not posting	A bug has been fixed in eWorksheet so that eWorksheet posts the INSTRUMENT field having field length upto 24 characters
10.	Analysis List and Location List Maintenance Selecting Multiple Codes for State Change	A bug has been fixed in Analysis Maintenance and LocList Maintenance so that multiple Codes can be selected for State Change
11.	Analysis List Maintenance - Ownership Fields Tab Order	A bug has been fixed in Analysis Maintenance application so that tab order of Ownership fields is maintained
12.	Backlog export to excel produces a csv file instead of xls	A bug has been fixed in Backlog Export to correct the SYSMGR setting to EXCEL_EXTENSION instead of EXCEL_EXTENSTION
13.	Results Entry Instrument Interfaces for XLS format / LABWORKS PR6 CSV / Labworks PR6 files from Backlog	A bug has been fixed in Results Entry and Backlog Report application so that Results Entry Instrument Interfaces support XLS format / LABWORKS PR6 CSV / Labworks PR6 files generated from Backlog Report
14.	Can't add analysis to sample in Results Entry	A bug has been fixed in Results Entry so that user can right click on test that is not ordered on sample and add analysis
15.	License count for login only not working for login only users	LW Desktop Configure License application has been enhanced to display a popup prompting the user to restart LWLicenseService so that the latest license allocation changes are applied
16.	NGMigrationTool Crashing during Migration	A bug has been fixed in NGMigrationTool to resolve the application crashes
17.	MOR report not displaying results	A bug has been fixed in MOR Report so that results are displayed correctly for selected date range
18.	EXCEL CALC - Scientific Notation Result	A bug has been fixed in Results Entry so that in case of Excel Calculation, rounding is applied to the result based on SYSMGR setting ROUND_EXCEL_CALC
19.	Sorting in Results Entry	A bug has been fixed in Results Entry so that data is sorted based on Results Entry

		Template configuration
20.	Copy paste in Multisample login	A bug has been fixed in Multi Sample Login so that copy and paste of multiple rows and columns from Excel into Login template is supported
21.	SAMPLE SELECTION - Analysis Validation Queue	A bug has been fixed in Sample Selection so that when selecting 'Analyses Awaiting Validation' prompt is displayed only if the number of samples is greater than the configured value
22.	DMR Update requires new User Defined Field	Sampler_ID included in eDMR requires new User Defined field SAMPLER ID
23.	NGII - PR6 not posting/PS-UDF Field Data Missing	A bug has been fixed in Process Scheduler so that User Defined data is retained after being logged into Process Scheduler
24.	You can't filter samples in process scheduler when the date is in the future using the new filter row.	A bug has been fixed in Process Scheduler so that samples can be filtered for future date
25.	eWorksheet Copy Paste Text Import Wizard Missing	A bug has been fixed in eWorksheet by supporting additional eWorksheet Template configuration for Unprotected Excel Sheet Names and QA QC Batch Cell Name
26.	PostResults6 fails to import MC results when number of unpopulated components plus number of results raws exceeds 61 for a given \$ACODE	A bug has been fixed in PostResults6 so that it imports MC results when comments are blank for a given \$ACODE
27.	Standard Labworks Calcs not Executing for Multi-comp Tests	A bug has been fixed in Results Entry so that Standard Labworks Calculations are executed for Multi-Component Tests
28.	Location Maintenance item list display	A bug has been fixed in Location List Maintenance such that the date fields are sorted as date and not as string
29.	Specification issue in NWA Quality Analyst	A bug has been fixed in SQC Charting so that "Target" value displayed in the chart, as per the configuration
30.	LWSampleLogin Logbatch Template Prompt Group Issue	A bug has been fixed in LWSample Login - Log Batch Template so that the template can be edited to remove all the prompt group items
31.	PQL is changed in result entry without reason for manually entered results	A bug has been fixed in Results Entry so that PQL is not changed automatically for manually entered results
32.	Can't enter results when the user is marked as user and not analyst in the new LWtraininandMaintenance.exe	A bug has been fixed in LWTrainingAndMaintenance application so performance is improved when user edits the data in result entry cell and ANLYST_BY settings are false
33.	eWorksheet Not Allowing Data Entry Past Column Z	A bug has been fixed in eWorksheet so that data entry into empty cells past column Z will be allowed
34.	RESULT ENTRY - LW Calculations not firing	A bug has been fixed in Results Entry so that LW Calculations are fired appropriately
35.	Process Scheduler assigns collection dates to samples that are ready to collect	A bug has been fixed in Process Scheduler so that collection dates are not assigned to samples that are logged in at ready to collect state

36.	Column sorting in Web Explorer does not save	A bug has been fixed in Web Explorer so that
27	properly	column sorting is saved properly
37.	Multicomponent calculation not following non- numeric result rule	A bug has been fixed in Results Entry so that Multicomponent calculation follows non-
	Humenc result fule	numeric result rule and returns result as Zero
38.	Result time and date not imported using CSV	A bug has been fixed in Results Entry import
50.	import	so that Analysis Start and End Date Times are
	import	imported using CSV import
39.	POST RESULTS 6/LW MULTI-COMPONENT	A bug has been fixed in LWMultiComponent
	TRANSFER - Default Values	Transfer so that while processing the input file,
		default values for MDL,UNIT,AREF are
		populated for analysis as well as analytes
40.	eWORKSHEETS - Not auditing all changes	A bug has been fixed in eWorksheet
		application so that values pasted or filled down
		are audited
41.	eWorksheets - Autofill issues	A bug has been fixed in eWorksheet
		application so that Autofill completes and
		remove samples from available list
42.	DESKMENU - New executables to be added	A bug has been fixed in LWDesktop so that
	by default	new executables/modules are automatically
40	December 2011	added to the default Desk Menu
43.	ProcessScheduler - Overflow error in schedule	A bug has been fixed in Process Scheduler so
	edit	that overflow error does not occur in Schedule Edit
44.	MULTI-COMPONENT TRANSFER- Analysis	A bug has been fixed in Legacy
44.	Date/Time Stamps	MultiComponent Transfer so that analysis start
	Date/Time Stamps	date/time is picked up from the GRF file
45.	QAQC Template & Batch builders not working	A bug has been fixed in QAQC Template
.0.	"Object reference not set to an instance of an	Builder so that the application launches
	object." error	successfully without Document Scanner issue
46.	Access Reports limited to 5000 samples	Access Reports - Increased number of
		samples that can be reported from 5000 to
		10000
47.	Missing sample information when printing	A bug has been fixed in Results Entry so that
	narrative text result from result entry	sample information is displayed properly when
		printing narrative text result
48.	Process Scheduler Cut/Paste Issue	Process Scheduler has been enhanced with
		"Change Request Date" option on Sample
49.	Unite do not display for Staats in Web Evalurer	View screen. A bug has been fixed in Web Explorer so that
49.	Units do not display for \$tests in Web Explorer	units are displayed for multi-component
		analytes
50.	LW Multi-Component Transfer - ANLABBR	A bug has been fixed in LWMultiComponent
50.	PR6 field not working	Transfer so that ANLABBR fields used in PR6
	The main man man man man man man man man man ma	data files get uploaded.
51.	LWSampleLogin PreLoginGroup Assigning	A bug has been fixed in LWSampleLogin so
	Test to Container	that Analysis assigned to Containers are saved
		in case of movement of analysis from 'NO
		CONTAINER' to a selected Container
52.	MULTI-SAMPLE LOGIN - Missing Pasted Data	A bug has been fixed in Multi-sample login so
		that data pasted from Excel into Multi-sample
		login is not lost
53.	Bulk Audit prevents saving results	A bug has been fixed in Results Entry so that
		result changes are saved even after turning on
	1	bulk audit trail.

54.	Object Scan Missing Error Handler	A bug has been fixed in Results Entry so that
54.	Object Scari Missing Error Handler	error handling is enhanced in Document
		Scanner
55.	Select Pre-Login Groups From File (PR2) Not	A bug has been fixed so that all Pre-Login
55.	Saving To Database	Groups from PR2 File are saved to Database
56.	LWDataservice Bartender label printing	A bug has been fixed in LWDataService
00.	doesn't wait for print job to finish, causing	Bartender Label printing so that it support
	errors on multiple print jobs	multiple print jobs
57.	Calculation not functioning properly after 6.10	A bug has been fixed in Results Entry so that
07.	upgrade from 6.5	calculation functions properly after
	apgitude nom old	LABWORKS upgrade
58.	LABWORKS Explorer comment icon displays	A bug has been fixed in LWExplorer so that
	whether comments are present or not.	Explorer comment icon is displayed only if
		comments are present.
59.	eWorksheets - Unable to edit cells	A bug has been fixed in eWorksheet so that
		user can configure EndCellColumnName, so
		that all the cells upto EndCell, can be made
		available for editing.
60.	QAQC Batching - eWorksheets do not launch	A bug has been fixed in eWorksheet so that
		eWorksheets are launched from QA QC Batch
		Builder
61.	eWorksheets Copy/Paste raw data hang up	A bug has been fixed in eWorksheet so that
		Unprotected Sheets are considered as Not
		Audited and copy paste operation does not
		cause the application to hang
62.	Null MDL values get converted to 0.000 when	A bug has been fixed in Results Entry so that
	a dilution factor is applied.	Null MDL values are not converted to 0.000
	110	when dilution factor is applied.
63.	When narrative results are modified in	A bug has been fixed in eWorksheet so that
	eWorksheet, the result concatenates to prior	narrative results are appended or overwritten
	results instead of overwriting	based on SYSMGR setting
64.	Inventory - Only permits creation on nodes	OVERWRITENARRATIVERESULT ' A bug has been fixed in
04.	with children	LWInventoryManagement so that storage
	with children	locations with names upto 150 characters can
		be created.
65.	LWSampleLogin mouse selects the entire	A bug has been fixed in LWSampleLogin so
	record raw instead of the cell(s)	that individual column cells can be dragged
66.	ANALYSIS LIST/STATE MANAGEMENT-	A bug was fixed in Analysis List Maintenance
	Blank Analysis Definition	such that duplicate entry of state transition
	,	from DRAFT to ACTIVE with transition modes
		as Manual and Automatic is handled properly
67.	LABOBJMAILLIST records being deleted by	A bug has been fixed in LW QA QC Batch
	LWQAQCBatchBuilder	Builder such that LABOBJMAILLIST records
		are not removed from the samples when a
		batch is created
68.	Lost Desktop Toolbar and Web Menu after	A bug has been fixed in LW Desktop so that
	upgrading	default WebMenu is always loaded after
		upgrade
69.	eWorksheet - Complete eWorksheet Message	A bug has been fixed in eWorksheet
	Box	application so that Complete eWorksheet
		Message Box does not appear on clicking
		"Complete eWorksheet" button
70.	LWWSystem - Save Ownership Error	A bug has been fixed in SYSMGR so that
		Ownership changes are saved

71.	Bottle code does not have result of done entered after login	A bug has been fixed in LWSampleLogin so that the result is automatically marked as DONE for the container after sample login.
72.	LWSampleLogin doesn't assign Analysis Attributes when using #GROUP	A bug has been fixed in LW Sample Login such that AREF, Replicate Configuration values are displayed in Analysis Edit irrespective of USE_CONTAINER flag setting
73.	Date and time entry in LWSAMPLE LOGIN	LW Sample Login has been enhanced to support automatic masking of input date and time as per the format.
74.	VIOLREORDER6.EXE ordering tests incorrectly	A bug has been fixed in Violation Reorder so that the application adds a test (as per Violation Rules) only for a target violation and does not add the same test for a non-violation result
75.	Can't change status of inventory item	A bug has been fixed in LW Inventory Management so that status of an Inventory Item can be changed
76.	SigPlus.ocx not registered during client install	A bug has been fixed in LW Installer such that there are no OCX errors during installation and un-installation
77.	MOR Reporting Exporting Only Partial Data in Select Conditions	A bug has been fixed in MOR Report such that all MOR mapped fields are exported to spreadsheet
78.	LWSampleLogin - Copy Paste Row 1 to Row 2 doesn't work	A bug has been fixed in LW Sample Login such that Copy Paste Row 1 to Row 2 works
79.	Tab Order Issue in Instrument Maintenance Application	A bug has been fixed in Instrument Maintenance application so that tab order in the "Instrument Detail" dialog box flows consecutively
80.	MOR - Missing Data	A bug has been fixed in MOR Report such that missing MOR data is displayed correctly
81.	ResultsEntry - Missing right click add analysis and AuditComment displays when no previous comment	A bug has been fixed in Results Entry so that "Add analysis" option is available and AuditComment pop-up is displayed only when there is previous comment
82.	LW Inventory Management - Filter Alert Home Page by Storage Location	A bug has been fixed in LW Inventory Management so that Filter Alert Home Page by Storage Location works properly
83.	LWSysCfg issues: LWSyscfg Workstation List not populated via LWLicenseService, crashes double clicking items, readonly auth tab	LWSysCfg Application has been enhanced so that authentication type (Domain/LABWORKS) can be configured at workstation level
84.	TLS 1.2 and Microsoft OLEDB Provider	LABWORKS application has been enhanced to support Microsoft OLE DB driver supporting TLS 1.2
85.	LW Login/Process Scheduler - Missing UDF Data	A bug has been fixed in Process Scheduler so that the user defined data is displayed in Process Scheduler for the samples logged-in via LW Sample Login
86.	Audit Trail Viewer Object ID picklist fails to populate for large AuditTrail table	A bug has been fixed in Audit Trail Viewer such that the filter for all the entered fields is considered while loading Object ID picklist and the picklist will not be populated if it contains more than 1000 items
87.	Access Reports Sample Comments Line 1-x	A bug has been fixed so that in Access

	Issue	Reports, Sample Comments for lines 2-x are
	10000	displayed properly.
88.	DMR - Calculating Geometric Mean and Max when 1 result and equal to the MDL	A bug has been fixed in DMR application so that Geometric Mean and Max values are calculated when result value is "1" and it is equal to the MDL
89.	LWSampleLogin - SEQUENTIAL_ANALYSIS_DUEDATE_RECA LC issue	A bug has been fixed in LWSample Login so that SEQUENTIAL_ANALYSIS_DUEDATE_RECA LC flag is no longer applicable, as the due dates are not calculated based on the "Prerequisite Analysis Code" due dates.
90.	DataViewer Copy/Paste no longer available	A bug has been fixed in LWDataviewer so that user can copy the selected information from the DataViewer Grid and paste it in notepad or excel
91.	INI file editor USER/DATA copies	A bug has been fixed in INI file editor so that if user tries to load a non-existent User or Data INI file then a new INI file is created
92.	Right button click issue in Process Scheduler	A bug has been fixed in Process Scheduler so that data grid on "Shelf Life" tab is not refreshed when right click operation is performed
93.	QCBatch order to eWorksheet order issue	A bug has been fixed in eWorksheet application so that QAQC Batch order is maintained in eWorksheet list
94.	Double login of samples on Process Scheduler groups	A bug has been fixed in Process Scheduler so that samples are not logged-in twice for one group
95.	Process Scheduler Sample Sorting/Selection Issue	A bug has been fixed in Process Scheduler so that sorted list of samples is maintained after launching programs (e.g. results entry and reporting) from those sample selections
96.	Doesn't show any available stock to add since 1 < 250 even though there is open stock for 1000uL (1mL) of component	A bug has been fixed in LW Inventory application such that available quantity and consumption quantity is compared based on their units
97.	Oracle 19 Client incompatible with 6.9/6.10 eWorksheets	A bug has been fixed in eWorksheet application so that it is compatible with Oracle 19 client
98.	Customer Reported Issue: MOR template issue	A bug has been fixed in MOR Reports so that result data is displayed appropriately in the reports
99.	ResultsEntry does not load all samples	A bug has been fixed in Results Entry so that data for all samples is loaded even if the samples have large number of replicates
100.	Cannot Change Batch Status in LWQAQCBatchBuilder	A bug has been fixed in LW QAQC Batch Builder so that batch status can be changed for existing batches using Context Menu
101.	Certain Batches cannot have statuses updated with Main LWQAQCBatchBuilder Edit Form	A bug has been fixed in LW QAQC Batch Builder so that batch status can be changed from Main Edit Form
102.	IGTabs40.ocx or one of its dependencies not correctly registered: a file is missing or invalid	A bug has been fixed in LW Client Installer so that IGTabs40.ocx, THREED32.OCX, PVXPLORE8.ocx and its dependencies are correctly registered

	Cmulticomponent Analyte Names	avport so that ANALYTE NAME field can be
	\$multicomponent Analyte Names	export so that ANALYTE NAME field can be selected for export
121.	LWDataviewer should work with Readonly License	A bug has been fixed in LWDataViewer so that Graphical Trend Viewer works with Readonly license
122.	MCSelect6 Overflow Error	A bug has been fixed in MCSelect application so that overflow error does not occur in case large number analytes are associated with the sample
123.	Replicates not getting correct result	A bug has been fixed in Results Entry so that correct replicate results are stored
124.	Progress Report Swapping Value Display of Dilution Factor and Qualifier Fields	A bug has been fixed in Progress Report so that Dilution Factor and Qualifier Field values are displayed under respective column headers
125.	Backlog Reports Showing Incorrect Due Date Warnings in Certain Column Configurations	A bug has been fixed in Backlog Report so that Due Date Warnings are not displayed incorrectly for certain Column Configurations
126.	LWWebTop - Explorer and Explorer Configuration Not working	A bug has been fixed in LWWebTop so that Explorer Configuration and Explorer- Browse Data display data properly
127.	LWQuickTrack Issue with moving containers	A bug has been fixed in LWQuickTrack application so that only the moved containers are displayed in the list after clicking "Move Container" button
128.	LABWORKS License Manager not displaying new optional licenses	A bug has been fixed in LABWORKS License Manager so that new optional licenses are displayed
129.	LWSampleLogin - Populate ANALYSIS.SGACODE when logging in samples/tests for # groups	A bug has been fixed in LWSampleLogin so that ANALYSIS.SGACODE is populated while logging in samples/tests for # groups
130.	License issue with login only license	A bug has been fixed in CRGEN so that the application works with LOGIN only license
131.	LWInventory introducing "grades" to selectively allow material, batch or bottle level granularity to support negative stock	LWInventory Management has been enhanced so that if items from multiple batches do not have sufficient quantity for Auto-consumption then system will deduct the consumption quantity from the FIFO batch and shall show Negative stock
132.	LWSampleLogin Ctl-C Ctl-V Not Working	A bug has been fixed in LWSampleLogin so that Ctl-C Ctl-V works for the grid
133.	QAQC Batch Builder Optional Field Display Issue	A bug has been fixed in QA QC Batch Builder so that configured optional fields are continued to be displayed, even after returning selected samples for the batch to the pending list
134.	COA Lot Number lookup fails when multiple lots	A bug has been fixed in COA application so that Lot Number lookup displays appropriate data even if there are multiple lots
135.	LWAutoScratch not running - command line case sensitive	A bug has been fixed in LWAutoScratch application so that the program processes command line from ResultsEntry without being case sensitive
136.	ResultsEntry User not qualified if number of analysts > 500	A bug has been fixed in Results Entry so that user qualification works correctly even if Number of Analysts is greater than 500

407	I MOverform been used in TLO 4.0 and in the	A humbon been fixed in LWOVCOTO as that
137.	LWSyscfg when used in TLS 1.2 configuration can't connect to labworks database to update users	A bug has been fixed in LWSYSCFG so that LWSYSCFG can connect to LABWORKS database to update users, when used in TLS 1.2 configuration
138.	Location Code Default Comments Null	A bug has been fixed in Location List Maintenance so that Null comments are not added by default
139.	Inventory Mgmt Printing Labels Some Print Some Don't	A bug has been fixed in LW Inventory Management so that all labels are printed
140.	ResultsEntry - Narrative Text - Form doesn't load for entry if user doesn't have METHODEDIT privilege	A bug has been fixed in Results Entry so that form is loaded for entry for Narrative text even if user doesn't have METHODEDIT privilege
141.	PAM Groups not saving or applying at login	A bug has been fixed in LWSample Login so that PAM Groups are applied to Acodes at login
142.	BACKLOG - Recently logged in samples showing as overdue	A bug has been fixed in BackLog Report so that recently logged in samples are not shown as overdue
143.	LW Sample Login - Not adding samples to database	A bug has been fixed in LW Sample Login so that an error message is logged if samles cannot be logged as there is schema difference between USERFLDS and SUSERFLDS tables
144.	Installation creates ClientApp.config file with wrong server name	A bug has been fixed in LWInstaller so that it automatically runs with administrative privilege and installation updates ClientApp.config file with correct Server Name
145.	Multi Component Transfer does not process PR6 files generated by backlog search	A bug has been fixed in LWMultiComponent Transfer so that it processes PR6 files generated by Backlog Search
146.	Process Scheduler CTRL click to deselect	A bug has been fixed in Process Scheduler so that user can perform CTRL click to deselect samples
147.	Access Report for COC does not update with new samples	A bug has been fixed in Access Report for COC so that new samples are displayed in the report
148.	Fix assigning analysts/instruments when multiple analyses are selected for the operation.	A bug has been fixed so that the list of analysts/instruments for assigning to a multiple selection includes only those analysts/instruments that can be assigned to each individual analysis. In other words, there should be an intersection of analysts/instruments by analyses in the list.
149.	Issues in loading some data in ProcessScheduler app	A bug has been fixed related to loading DUEDATE, SAMPCOL, OKTOCOLLECT, PAUSED, Qbatched in Process Scheduler.
150.	Exclude PSANLDONETIME sample property from the database	A bug has been fixed so that Analysis complete date is calculated as the maximum analysis start date of all the sample analyses in LWSampleLogin, ProcessScheduler6, LWPSService applications
151.	Remove SAMPLE.SPARETIME from the database.	A bug has been fixed for the logic of using SPARETIME property in LWSampleLogin, ProcessScheduler6, LWPSService applications

Known Issues and Workarounds

Support for Crystal Reports has been divided into two installers. Embedded in the standard ClientSetup65.msi is the Crystal 2013 Runtime display support. If the user also requires Crystal XI Report Designer Control (RDC), then the user must install CrystalXIRDC.msi.

When CrystalXIRDC.msi is installed, if IIS isn't installed on the computer, then the folders "css", "html", "images", "js", "prompting" folders get created in the c:\ folder. These folders are created as part of the Crystal Reports merge module. The option in the merge module to disable creation of these folders when IIS isn't present doesn't work as documented.
