### Introduction

This document contains the release notes for LABWORKS 7.1. The following sections describe the release and provide late-breaking or other information that supplements the main documentation.

This is a release that improves quality, reliability and performance and adds enhanced functionality for several of LABWORKS core modules.

#### **Overview**

LABWORKS 7.1 is the latest version of LABWORKS LIMS.

### What's New 7.1

Sr.No	Item	Description
1.	New LWEmailSender application	LWEmailSender application has been developed for facilitating sending of emails from LABWORKS applications
2.	Add RETAIN_WINDOW SYSMGR Setting	Process Scheduler application has been enhanced to use RETAIN_WINDOW setting from SYSMGR
3.	Encryption Security support for communication with LWDataService	LABWORKS application has been enhanced to support transport level encryption security
4.	New LWPostResults Module	LABWORKS Post Results new module has been developed to allow user to select a group of files to run PostResults
5.	SAMPLE MODIFY - ANUM order/editing	Sample Modify application has been enhanced so that ANUM order can be modified
6.	Auto Qualifier support for non- numeric results	Auto Qualifier has been enhanced to work with non-numeric results
7.	Ability to use %MDL% variables in the ini SpreadResult Entry section	LABWORKS application has been enhanced with the ability to use %MDL% variables in the ini SpreadResult Entry section
8.	CR Launch Pad - Email confirmation/notification for emails not sent	CR LaunchPad application has been enhanced to support SMTP configuration and provide email confirmation/notification for emails not sent
9.	Allow calculated date to be taken from source other than key input	Results Entry application has been enhanced to allow calculated date to be taken from source other than Key Input
10.	HELP tool icon (differentiate between local and web help)	LABWORKS Desktop application has been enhanced to change text from "HELP" to "ONLINE MANUAL" for the help menu folder - "HELP" shortcut.
11.	Report User field support for Export	Export Report application has been enhanced to support "Report User" field for export
12.	Process Scheduler Menu enhancement	Process Scheduler application has been enhanced so that QuickTrack and Custody Tracking options are displayed in Menu
13.	DMR Module Discharge/Limit Set Enhancement	DMR Module has been enhanced to support updated Discharge/Limit Set parsing logic
14.	Enhance NGMigrationTool to allow for specifying sample ranges	NGMigration Tool has been enhanced to allow user to specify a Sample Range so that only specified samples can be migrated
15.	Add Labworks Spec Limits to Control Chart	LWCtrlChartMDLStudy application has been enhanced to display LABWORKS Spec Limits for Control Chart
16.	Upgrade to Crystal Report version 2020	LABWORKS application has been enhanced to support Crystal Report 2020
17.	MOR Create Data Set - ExportData with a Cross Ref Search	MOR application has been enhanced to support data export using Cross Reference Search
18.	Enhance SampleModify to support post modify programs with	SampleModify application has been enhanced to support post modify programs with parameters

	parameters	
19.	Apply NoConditioning rule to MDL during Post Results 6 processing	Post Results 6 application has been enhanced to apply NoConditioning rule to MDL
20.	Save eWorksheet under UserPath	eWorksheet application has been enhanced to save eWorksheet under "User Path" folder instead of "Temp Path"
21.	AuditTrail Viewer enhanced to support Object ID based filtering	Audit Trail Viewer has been enhanced to view the audit trail data based on Object ID
22.	LWSampleLogin enhancement for Method Reference and Replicate Information	LWSampleLogin has been enhanced to fetch Method Reference and Replicate information based on Location Code
23.	Support LoginBatchID Format PROJYYMMDD	LWSampleLogin application has been enhanced to support LoginBatchID format of PROJYYMMDD
24.	Change LABWORKS SQC Charting form label	LABWORKS SQC Charting form label has been corrected
25.	MOR Direct Connect option to fetch data	MOR report generator has been enhanced so that user can load the data directly by using macros to fetch the data
26.	Add expiration date to LWInventory ItemStock report	LWInventory Item Stock Report has been enhanced to support expiration date
27.	User defined fields enhanced to support MSDS	LABWORKS application has been enhanced to display 'SDS' instead of 'MSDS'
28.	Default result value used in all Sample Login tools	LABWORKS application has been enhanced to support default result value in all Sample Login tools
29.	Audit new and modified user accounts	LABWORKS application has been enhanced to audit new user account creation and modification of user accounts
30.	CRGEN ability to export more than one field EXP01, EXP02, EXP03	CRGEN application has been enhanced to export more than one field e.g. EXP01, EXP02, EXP03
31.	Add ability to review RAW results in Data Viewer	LWDataViewer application has been enhanced to support review of Raw results
32.	Autologin640 - Support Replicate result upload	In AutoLogin640 use keyword REPNO as property for result to specify replicate number
33.	Support re-activation/deactivation of Menus in Menu Editor in LABWORKS Desktop	LABWORKS Desktop has been enhanced to allow user to deactivate and reactivate menus
34.	Add option to import datafiles as objects in Multicomponent Transfer	LWMultiComponent Transfer has been enhanced to support import of datafiles as objects
35.	Add SAMPLE.REQTIME support for AutoLogin640	AutoLogin640 has been enhanced to support SAMPLE.REQTIME field
36.	Allow for setting of Custom Workflow architect statuses from Process Scheduler	Process Scheduler has been enhanced to allow setting of custom workflow architect statuses
37.	Loc List and Test Code search in LWSample Login to support "StartsWith" and "Contains"	LWSample Login application has been enhanced so that Loc List & Test Code search will support "StartsWith" by default and support * wild card for "Contains"
38.	Add error prompt when a date field cannot accept input in Sample Modify	Sample Modify application has been enhanced to display an error prompt upon entering invalid date time format
39.	Add configuration option to report violation when any individual replicate value is Out of Spec.	Results Entry application has been enhanced to report violation when any individual replicate value is out of specification, based or SYSMGR Setting "REPLICATE_REPORT_IND_VIOLATION".
40.	Post Results Entry Programs should be automatically triggered after E- Worksheet Upload	eWorksheet application has been enhanced to support execution of Post Results Entry Programs e.g. ViolationReorder after posting the results
41.	Enhance LWViolationReorder speed when invoked from ResultsEntry	Results Entry application has been enhanced to support post result program invocation in asynchronours mode
42.	Results Entry Template - Cursor Movement Improvement	Results Entry application has been enhanced to support cursor movement configuration as 'Next Cell' or 'Next Empty Cell'
43.	Add Use Login Record File Control to PS Service Controller	PS Sample Scheduling Service Controller has been enhanced to support use of login record files in the logged samples based on LOGIN_USELRF INI Setting
44.	Enhance ResultsEntry to display Instrument List on Details Page	Results Entry application has been enhanced so that ResultsEntry Detail Edit, Single and Multi-component screens display Instrumen

		List drop down for selection
45.	Support 'Trigger only on Violation' flag in Violation Reorder application	LWViolationReorder has been enhanced so that trigger can be invoked with/without violation based on "Trigger Only On Violation" flag
46.	Provide option to reset LABWORKS Desktop position to center of active monitor.	LABWORKS Desktop application has been enhanced so that LABWORKS Desktop position is reset to center of active monitor, if previously saved context is no longer valid
47.	Add ability to resize and save the size of the main COAPRN6 program.	COAPRN application has been enhanced with the ability to resize the main COAPRN6 program and save user specific context
48.	Add qualifier to all samples in one batch	QA/QC Batch Builder has been enhanced so that a qualifier can be applied to all of the samples in the same QC batch
49.	Modify Audit Trail to track all result source changes	LABWORKS applications e.g. Results Entry, PR6 have been enhanced so that all result source changes will be tracked in Audit Trail
50.	NGII Reruns and Conflicts User Enhancement	LWMulti Component Transfer has been enhanced so that when Reruns and Conflicts are active, single instance of sample/test code is selected by default and not included in Conflict Count
51.	Make latest report number and date exportable in the CEF	Export Sample application has been enhanced so that latest Report Number and Date can be exported in CEF
52.	Allow moving of any selected item to the top of a list with one button click.	Sample Modify application has been enhanced so that user is allowed to move any selected item to the top/bottom of the list with one button click instead of only moving one up or one down each time.
53.	MDL Study Tracking – support reason for excluding samples	MDL Study Tracking application has been enhanced with audit trail capabilities for each study such that user can enter the audit trail reason for excluding the samples
54.	LWExplorer - Add cancel option if selecting a huge data set.	LWExplorer has been enhanced to display "Cancel" option on the progress bar displayed while loading the data set, so that user can cancel the load operation if required.
55.	QC Batching - Add Test Codes to Special QA Samples in Batch Template	QAQCBatchTemplateBuilder has been enhanced to add test codes to special QA samples
56.	Enhance Work Area on Customer Base Set in COA Application	Customer Base Setup in COA application has been enhanced to have enlarged work area
57.	Process Scheduler - Readability of colors for "Due within 48" in Blank DB configuration	LABWORKS SYSMGR setting for Process Scheduler "Due within 48 hrs" font and background colours have been made more readable in blank default database
58.	Allow export of samples found using Cross Reference Search	Cross Reference Search application has been enhanced to allow export of samples found using cross reference search to Excel
59.	Improve audit trail entries for sample delete	Sample Modify application has been enhanced so that user can delete multiple samples at once and apply audit trail reason to all samples at one time, to prevent repeated UI entry for each deletion.
60.	Importing Replicate Data - global import behavior configuration	Results Entry application has been enhanced so that it supports global import configuration for Replicate Data through SYSMGR setting "IMPORT_REPLICATE_DATA". It will support OVERWRITE, APPEND and FILLNULLANDAPPEND values.
61.	Sample Modify - More fields available for edit	Sample Modify application has been enhanced so that user can edit "Logged in by" field.
62.	Add AdHoc charts to SQC Routine	SQC Charts has been enhanced with adhoc SQC charting support
63.	LWQuickTrack Enhancements	LWQuickTrack application has been enhanced with the ability to use the record selector (highlighting in blue) to apply the next action (print label, move, delete) on those selected containers only
64.	LWExplorer - add Sample Level Violation indicator	LW Explorer has been enhanced to display 'Has Violations' field at sample level

# What's New 7.0

Sr.No	Item	Description
1.	Use ObjectPublisher for custody tracking reports.	Default report templates (CRYSTAL_CUSTODY, CRYSTAL_RESULTS) have been added to ObjectPublisher. Supported apps are: LWSampleLogin, ProcessScheduler6.
2.	Update crystal report data sources.	New SAMPLE columns have been added. SIMC.xsd, LWReporting.xsd data sources have been updated.
3.	Remove the ADD_TO_PROCESS_SCHEDULER system parameter.	ADD_TO_PROCESS_SCHEDULER has been deprecated
4.	Enhance sample login templates with new sample properties SPRIORITY, REQTIME, CUSTOMER.	The new properties have been added to LWSampleLogin template configuration.
5.	Enhance the reorder and the copy operation in the ProcessScheduler6 app.	Added copying sample comments, user-defined fields, sample attachments, special info fields, result specifications, analyses creation in ProcessScheduler6.
6.	Container property enhancements	Analysis List Maintenance, LWSampleLogin, Results Entry, PostResults6 applications have been enhanced to support Container properties e.g. Preservative, Container Type
7.	Add default qualifier option to LABWORKS analyses	LWAnalysis Maintenance application has been enhanced to support default qualifier for analysis codes/analytes for Single and Multicomponent Analysis
8.	AuditTrailViewer Enhancement - improve querying capabilities	AuditTrail Viewer application has been enhanced with "Contains" filter for Object Type and Object ID fields
9.	Email Crystal Reports support	Crystal Report Viewer application has been enhanced with the ability to attach the report being viewed to an email and send the email
10.	TNI Compliance - MDL Study Tracking and Reporting	A new application has been developed for tracking Control Chart and MDL Study. MDL Study supports CLASSIC as well as NELAC Rulesets.
11.	CustLog6 window minimizing (calling from LWSampleLogin)	CustLog6 application window can be minimized and restored when invoked from LW Sample Login
12.	Add sample header fields to Data Viewer	LWData Viewer application has been enhanced to support Report Address and Invoice Address fields in Sample Information configuration
13.	Dataviewer icon and GTV launch enhancements	LWDataViewer has been enhanced so that with "Send Data To GTV" option user can start graphical trend viewer, without the need to manually "copy / paste" the data into the application
14.	Increase MDL property length to 14 characters	LABWORKS applications have been enhanced to increase MDL property length to 14 characters
15.	LABWORKS Email Configuration Form label improvements	LABWORKS Email Configuration Form labels have been improved
16.	LABWORKS error log – Do not load all records at first.	Error Log Viewer application has been enhanced with the functionality to truncate all the records in database.
17.	eWorksheet - populate current LW user ID when creating	eWorksheet application has been enhanced to populate current logged-in LABWORKS User ID as "Analyst" while creating new eWorksheet
18.	eWorksheet Misc UX Enhancements	eWorksheet application has enhanced UX and eWorksheet Template changes are reflected in eWorksheet Builder without restarting eWorksheet Builder
19.	Add ability to leave eWorksheets locked for cells containing macro/formula/code.	eWorksheet application has been enhanced to leave eWorksheets locked for cells containing macro/formula/code
20.	eWorksheet Enhancements: ability to resize window	eWorksheet application has been enhanced to have the ability to resize the window
21.	eWorksheet from QCBatch Sample- Test List Up-Down Arrow	eWorksheet application has been enhanced to support Up-Down Arrow movement for QCBatch Sample-Test List

26. Inventory - Label Courter - Increase to support 6 digits 27. Inventory - Add Location to Label LWInventory Management application has been enhanced so that Label counter is increased to support 6 digits 28. Inventory Module - Display DISPOSED in Item Stock for Restocking All Stock In LWInventory Management application has been enhanced so that Item Location is printed on the label. LWInventory Module - Display DISPOSED in Item Stock for Restocking All Stock In Label Counter is increased to support 6 digits 29. PSSCHEDULE and SAMPLE table merge tasks - Workflow Architect Changes 30. Enhance Explorer to expose friendly names for new SAMPLE DB properties 31. LOCATION code acceptable characters 32. Launch QA QC Batch Builder for the selected QA QC Batch ID from Data Viewer/LW Explorer 33. LWQuickTrack - enhancement for print labels 34. QuickTrack Vasability and interface issues 35. Scan documents directly into attachments 36. LW Sample Login - Moving the cursor vertically 37. Graphical Trend Viewer - Copy to clipboard characters 38. License count exceeded locks all connected users 39. eWorksheelBuilder - formatting issues 40. LWInventory Management Improvements for large number of storage locations 41. Inventory Management Improvements for large number of storage locations 44. Inventory Management Improvements for large number of storage locations 44. Inventory Management Improvements for large number of storage locations 44. Inventory Management Improvements for large number of storage locations 44. Inventory Management Improvements for large number of storage locations with hierarchical selection view 44. Inventory Management Improvements for large number of storage locations 44. Inventory Management Improvements for large number of storage Locations has been enhanced to support large number of storage Locations with hierarchical selection view during Management application has been enhanced to support large number of storage Locations with hierarchical selection view large number of storage Locations with hi	entry and Result Validation screens lhave been enhanced so that elworksheet application can be launched for the selected sample and analysis  eWorksheet enhancements eWorksheet enhanced to support "Validate status"  24. Add LWEXE path to Help I About dialog 25. Instrument Maintenance - Add Front page sort column for Location 26. Inventory - Label Counter - Increase to support 6 digits 27. Inventory - Label Counter - Increase to support 6 digits 28. Inventory Module - Display DISPOSED in Item Stock for Restocking 29. PSSCHEDULE and SAMPLE table merge tasks - Workflow Architect Changes 30. Enhance Explorer to expose friendly names for new SAMPLE DB properties 31. LOCATION code acceptable characters 32. Launch AQ AC Batch Builder for the selected QA QC Batch Builder for the selected QA QC Batch ID from Data Viewer/LW Explorer 34. QuickTrack - enhancement for print labels 35. Scan documents directly into attachments 36. LW Sample Login - Moving the cursor vertically 37. Graphical Trend Viewer - Copy to clipboard (Inventory Management Label printing launch of the selected placed on the configuration has been enhanced to support on the label on the label of the selected place on the configuration has been enhanced to support updated Workflow Architect State transitions for Sample object Container Label printing 36. LWGuickTrack - enhancement for print labels 37. Graphical Trend Viewer - Copy to clipboard 38. License count exceeded locks all connected users 39. eWorksheetBuilder - formatting issues 39. eWorksheetBuilder - formatting issues 30. Livense and LW Explorer application has been enhanced to support on the property on		Enhancement	
entry and Result Validation screens have been enhanced so that eWorksheet application can be launched for the selected sample and analysis eWorksheet application has been enhanced to support "Validated" status  24. Add LWEXE path to Help   About dialog 25. Instrument Maintenance - Add Front page sort column for Location page sort column for Location of Inventory - Label Counter - Increase to support 6 digits 26. Inventory - Label Counter - Increase to support 6 digits 27. Inventory - Add Location to Label Liventory Management application has been enhanced so that Item Location is printed on the label. Liventory Management application has been enhanced so that Item Location is printed on the label. Liventory Management Improvements for large number of storage locations.  18. Inventory Management Improvements for large number of storage locations.  18. Inventory Management Improvements for large number of storage locations.  18. 	Onits and Consumption Onits   Support Mixture Storage Units and Consumption Units	44.		

45.	Inventory Management Workflow Received before OPEN	LWInventory Management application has been enhanced to display records for all the statuses, configured in Workflow Architect, on Inventory Management grid
46.	Inventory Management Enhancement to assist tracking Columns (GC/LC)	LW Inventory Management application has been enhanced to assist tracking Columns (GC/LC)
47.	Multi Component Transfer - allow save all without having to individually select items	LW Multi Component Transfer application has been enhanced to allow selection of multiple items for saving so that user does not have to select individual items separately
48.	LWMCT supports Post Processing Programs	LW MultiComponent Transfer Application has been enhanced to support Post Processing Programs
49.	LWPostResult6 Enhancements	"IwPostResults6.exe" application has been enhanced so that if PR6_INPUTFILE SYSMGR setting is NULL then on executing "IwPostResults6.exe PR1" command, user will be prompted to select the input file.
50.	Allowing files greater than 10 MB to be attached to a QAQC Batch as a link	LABWORKS Document Attachment functionality has been enhanced so that if "ATTACH_OVER_MAXFILESIZE_AS_LINK" SYSMGR setting is true, then the document is automatically attached as link when over "ATTACHMENT_MAXFILESIZE" SYSMGR setting value.
51.	LWQAQCBatchBuilder - Allow custom Date Range modification to be stored per user	LW QAQC Batch Builder has been enhanced such that it will store Start Date / End Date modification on Existing and My Batch tab on per user basis
52.	Sample Login - assigning tests filter by department	LWSample Login was enhanced so that it is possible to assign test filters by department
53.	SampleLogin LocCode TestCode Search using Contains filter	LWSample Login, Analysis List Maintenance, LocList Maintenance application search facility has been enhanced for Location code and Analysis code to use "contains" instead of "starts with" search capabilities
54.	LWSampleLogin - Enhance Copy Paste functionality to include Location Code, Analysis Code and Comment	LW Sample Login application has been enhanced such that Copy Paste functionality includes Location Code, Analysis Code and Comment
55.	Modernize LWSampleLogin's look'n'feel by applying a more modern visualization template	LWSample Login has been enhanced to modernize its look'n'feel by applying a more modern visualization template
56.	LWServiceControllers form improvement	LW Service Controller application UI alignment has been enhanced
57.	Enhance LWSysCfg user onboarding process	LWSysCfg user onboarding process has been enhanced to update the users list based on UserHead table
58.	ModifySamples6 Minimize Window enhancement	ModifySamples6 application has been enhanced to support minimize window functionality
59.	MOR Create Data Set - ExportData with a Cross Ref Search	MOR application has been enhanced to support data export using Cross Reference Search
60.	MOR design program blocked when duplicate output cell	MOR Setup application has been enhanced such that duplicate output cell configuration is not allowed
61.	NGII Agilent GC for Method 2186	NGII Interface has been developed : Agilent GC for Method 2186
62.	NGII Horiba ICP Instrument Interface for ERCO	NGII Interface has been developed : Horiba ICP
63.	NGII QuantStudio 6 qPCR	NGII interface has been developed : QuantStudio 6 qPCR
64.	NWA SQC Charts - Add Method Reference	NWA SQC Charts have been enhanced to add Method Reference to the second label
65.	Allow comment import from post result 6 on analyte level	Post Results 6 (PR6) application has been enhanced to allow comment import at analyte level based on OVERWRITECOMMENTS parameter
66.	PR6 command line processes records having space after Analyte Name	Post Results 6 application has been enhanced to handle space after Analyte Name
67.	PostResults6 Imports - allow append of !COMMENT result in	PostResults6 application has been enhanced to append or overwrite the earlier narrative analysis result based on

	NTRLTS table	OVERWRITENARRATIVERESULT parameter
68.	Process Scheduler supports	Process Scheduler has been enhanced to support association of
00.	Container association	analysis codes to containers for timed groups
69.	Add sample description to Process	Process Scheduler has been enhanced to add Location Description
	Scheduler	as column option
70.	Process Scheduler - request	Process Scheduler has been enhanced to request username and
	username and password for data	password for data entry
	entry	
71.	Allow timed groups to be sorted	Process Scheduler has been enhanced so that timed groups can
72.	alphabetically in Process Scheduler Up/down record movement in	be sorted alphabetically as per selection  Process Scheduler application has been enhanced to support
12.	Sample Receipt	up/down record movement on Sample Receipt configuration screen
73.	Process Scheduler - By Analysis	Process Scheduler application has been enhanced to support
	Column Width and QC Batch ID's	Analysis Column Width of 24 characters
74.	Process Scheduler - Sort Order	Process Scheduler has been enhanced so that when selecting
		SampleModify, the list of samples selected previously is retained
		after completing Sample Modify
75.	Process Scheduler - Download to	Process Scheduler application has been enhanced so that "Send to
	PDA	PDA" option creates a CSV file with a browse for the file save, so
76.	PSSCHEDULE and SAMPLE table	that the name and location of file can be specified
70.	merge tasks	LABWORKS application has been enhanced to merge Process Scheduler and Sample table
77.	Allowing a user to modify the PS	Process Scheduler has been enhanced so that user can modify PS
'''	Priority on multiple samples at a	Priority of multiple samples at a time
	time	
78.	Container Tracking from QC Batch	QA QC Batch Builder application has been enhanced to support
	-	launching of LW Container Management for the samples in the
		batch
79.	QC Batching - add samples that are	QA QC Batch Builder application has been enhanced so that typed-
	already batched to a new batch	in or scanned Sample ID can be added to Available Sample Grid,
90	QC Batching - add "contains" filter to	irrespective of the sample status
80.	all grids	QA QC Batch Builder application has been enhanced to support "Contains" filter for all the grids
81.	QC Batching - Report Template	LW QAQC Batch Builder application has been enhanced to support
0	functionality enhancement	multiple report templates
82.	Due Colors PALE Setting for	LW QAQC Batch Builder and eWorksheet applications have been
	QCBatching and eWorksheet	enhanced to support PALE setting for Due Date Colours
83.	Improvements to new version of	LWQuickTrack application has been enhanced to display "Analysis
	QUICKTRACK	Status" so that user can dispose the Container if the status is
		"Validated"
84.	Replicate Management - Add	Replicate Management application has been enhanced to display
85.	Sample ID to list of fields	Sample ID on Replicate Management Form
65.	REPORTHEAD.REPORTUSER needs to be added to the	Report application has been enhanced so that REPORTHEAD.REPORTUSER field is added to
	FLATDATA_REPORTHISTORY for	FLATDATA_REPORTHISTORY for export
	export/report	TEMBRING NET OR THIS TORK TO SUPPOR
86.	Result Entry - Analysis Code Sub-	Results Entry application has been enhanced to display only the
	filtering	analysis codes assigned to samples based on "Filter by analysis
		assigned" configuration in Result Entry setup.
87.	Re-order tests from Results Entry	Results Entry application has been enhanced to support re-
	Describbe Forting F. P. D. 11 C.	ordering of tests
88.	Resultls Entry - Edit Results Screen	Results Entry application has been enhanced to improve the
89.	Improvement Analysis Start/End Date/Time	usability on Edit Results Screen  Results Entry application has been enhanced such that invalid
09.	Warning Prompt	Analysis Start Date Time or End Date Time is highlighted with red
	Training i Tompt	background colour
90.	Allow raw results to be used in	Results Entry application has been enhanced so that raw results
	calculations, exports	can be used in Calculations and Exports
91.	Locking analyst initials in result	Results Entry application has been enhanced so that only valid
	entry to a pick list	analyst initials can be entered

92.	Results Entry - allow for ctrl+c / ctrl + v from keyboard	Results Entry application has been enhanced to support ctrl+c / ctrl + v from keyboard
93.	Results Entry - Bulk Audit Trail change logs	Results Entry application has been enhanced so that if "BULK_AUDIT" SYSMGR setting is true then audit trail will be recorded in bulk, only when the user presses save
94.	Results Entry - Importing PR6 data for single component results	Results Entry application has been enhanced to support AREF and MDL while importing PR6 data for single component results
95.	Result Entry - spec evaluation on cell focus change after rounding	Results Entry application has been enhanced to use "ROUND_RESULT_BEFORE_SPEC_EVALUATION" SYSMGR setting so that spec evaluation is applied after rounding, on cell focus change
96.	List of Units enhancements	Results Entry application has been enhanced to allow list of units to be filtered based on Units configuration in Analysis Maintenance application
97.	ResultsEntry - Replicate Data Entry - Usability	Results Entry application has enhanced usability to support F6 shortcut key for Replicate Management Form. Replicate Management Form has been enhanced to display Graph as a tab and to save the context for the form size.
98.	Filter Quick Navigation features in data validation	Sample Analysis And Validation application has been enhanced with quick search and alphabetical sorting features for analysis.
99.	Sample/Analysis validation highlight the violating results in the detail review for components	Sample Analysis validation has been enhanced so that the violating results are highlighted in the detail review for components
100.	Sample Invoice enhanced to support 4000 chars in SAMPNOS field	Sample Invoice application has been enhanced to support 4000 characters in SAMPNOS field in INVHEAD table
101.	MODSMPS6 - Add Update Due Date	MODSMPS6 application has been enhanced to support due date updates
102.	Sample Validation INI Enhancement to Show Qualifier	Sample Analysis and Validation application has been enhanced to display Qualifier field based on INI Setting "DISPLAY_QUALIFIER"
103.		ScanDaemon - When in Debug mode temporary PR6 files are not deleted.
104.	Zip Report Folder Organization Enhancements	Zip Report application has been enhanced so that user defined folders can be added. Also reports organized by type (Crystal, Access, Label) have the ability to be copied to My Reports folder and User Defined folders.
105.	Add ability to attach bottle code to analysis in AutoLogin640	AutoLogin640 application has been enahnced so that bottle code can be attached to analysis
106.	Improve LWSampleLogin performance during configuration	LWSampleLogin application performance has been enhanced during template configuration

### What's New 6.10

Sr.No	Item	Description
1.	Analysis Qualification based on Method.	Analysis Qualification based on Method instead of Analysis Code for Personnel and Instruments
2.	Visually group analyses inside containers.	Visually group analyses inside containers without having to use #group analyses
3.	QuickTrack enhancements making container movement easier	LWQuickTrack application has been developed for Container Management.
4.	Corrective Action / Preventive Action Reporting (CAPA)	Corrective Action / Preventive Action Reporting (CAPA) functionality has been added.
5.	New personnel training & instrument calibration with events view	Personnel training & instrument calibration applications have been enhanced with events view.
6.	Scheduled Calibration and Maintenance Events	Instrument Calibration application has been enhanced to support scheduled calibration and maintenance events.

8. Persisted Group Enhancements & Migration Tool. 9. ANALYSIS CODE CALCULATION - Divide by Zero CALCULO	7.	Event notifications support	Event notifications for Personnel Training & Instrument Maintenance, as well as CAPA
9. ANALYSIS CODE CACULATION - Divide by Zero CACULATION - Analysis CACULATION - Divide by Zero error during the result calculation CACULATION - Analysis CACULATION - CACULATION - CACULATION - CACULATION CACULATION -	8.		Persisted Group Enhancements so that they now work as log batch
CALCULATION - Divide by Zero receiving divide by zero error during the result calculation  10. Enter a CAS number for containers in analysis maintenance  11. Analysis List Maintenance application has been enhanced to support CAS number for Containers in analysis maintenance  11. Analysis List Maintenance - Improve Delete Analyte  12. Audit trail entries for newly added results and filespec for imports  13. AUTOLOGIN – Analytes  14. Automatic Exception Report to support CRGEN.NI added supplication has been enhanced so that the user can provide a specific list of analytes through the command prompt CRGEN.NI added support for: SEL_FORMULA_HAS_DATA Use a data selection formula to verify there will be data on the report, if not then don't print  15. Backlog report save to XLS improvement  16. CRGSS REFERENCE - filtering search  17. Enhance Current Report Number Tracking Capability to Better Include Revision Number  18. Increase analyte name field size to accommodate longer names  19. eWorksheet display Excel Ribbon  20. eworksheet Enhancement Save eWS Default to No  21. Add ability to leave eWorksheets locked for cells containing macro/formula/code  22. eWorksheet Enhancement Save eWS Default to No  23. eWorksheet - Adding samples to eWorksheet to specific location only a fraction (specific quantity) of a stock term.  24. eWorksheets - display container ID  25. eWorksheets - display container  26. EWorksheets - Turn off screen update when populating audit  27. LWinventory ability to transport only a fraction (specific location only a fraction (specific quantity) of a stock term.  28. LW Client-Install/Uninstall Script automated install/uninstall and upgrade  29. Add ability to select or deselect  ALL parameters for MC test in worksheet application based on the result automated install/uninstall and upgrade  29. Add ability to select or deselect  ALL parameters for MC test in the container of the container of the	9.		
10. Enter a CAS number for containers in analysis maintenance 11. Analysis List Maintenance - Improve Delete Analyte 12. Audit trail entries for newly added results and fliespec for imports 13. AUTOLOGIN – Analytes 14. Automatic Exception Report to support CRGEN.INI added support for: SEL_FORMULA_HAS_DATA Use a data selection formula to verify there will be data on the report, if not then don't print 15. Backlog report save to XLS improvement 16. CRGS REFERENCE - filtering search 17. Enhance Current Report Number Tracking Capability to Better Include Revision Number 18. Increase analyte name field size to accommodate longer names 19. eWorksheet Enhancement Save eWS Default to No 20. eWorksheet Enhancement Save eWS Default to No 21. Add ability to leave eWorksheets locked for cells containing macroformula/code 22. eWorksheet - Adding samples to eWorksheet to specific location (specific coation) as sook item. 23. eWorksheet - fisplay container ID 24. eWorksheet - display container ID 25. eWorksheet - fisplay container ID 26. eWorksheet to specific location workshoet in workshook 27. LWInventory ability to transport only a fraction (specific quantity) of a stock item. 28. 30.	LWMultiComponentTransfer: Update MDL and PQL based on Dilution Factor changes	LWMultiComponent Transfer application has been enhanced so that MDL and PQL values are updated based on Dilution Factor changes
31.	Allow user to see list of PR2 records in LABWORKS database when saving prelogin	Multi Sample Login Application has been enhanced to allow the user to view and update the current Pre-login Group Name while saving the pre-login group
32.	groups  QAQC Batching Query/Display in Data Viewer	LWDataViewer has been enhanced to support QA QC Batching in filtering and display
33.	LWAuthentication – generate error when FIPS compliant requirement is not met.	LWAuthentication enhanced to display specific FIPS Compliance requirement related error to the user
34.	License count exceeded locks all connected users	License Manager has been enhanced so that when 10 users are logged in and the 11th user tries to login then he should get a warning message "The maximum number of Licenses are currently in use". Already logged-in users should not get any message
35.	Audit old value and new value of long text when changing comments in LABWORKS Desktop	Audit logs have been enhanced to keep track of old comments when they get replaced by users
36.	LW EXPLORER - Print Comments	LWExplorer application has been enhanced to support printing of comments
37.	Add QA/QC batch number in Explorer	LWExplorer application has been enhanced to display QA/QC batch numbers
38.	Viewing the Secondary Result from LWExp_DotNet	LWExplorer .NET Application has been enhanced to display Secondary Result and Qualifier based on the configuration
39.	LWInventory - Phone number field, allow user to enter characters in addition to numbers	LWInventory Management application has been enhanced to support characters in addition to numbers for Phone Number field
40.	LWInventoryManagement: Add Manufacturer picklist available in the Itemstock table	LWInventory Management application has been enhanced so that the manufacturer is associated with Itemstock instead of Item
41.	Inventory Management – Filter with "Contains" instead of "Starts With".	Inventory Management has been enhanced to support "Contains" in the filter instead of "Starts with"
42.	Improve license count debugging	LWLicense Manager has been enhanced to release dangling sessions
43.	LW Login - Entering Comments	LW Sample Login has been enhanced so that user can click the comments button and directly enter in the text
44.	Sample Login - Add the capability for the Picklist for a field to be a combo/edit field	LW Sample Login application has been enhanced to add the capability for the Picklist for a field to be a combo/edit field
45.	Limit selection of databases to configured databases in Webtop	LW WebTop application has been enhanced so that during login LABWORKS databases available for selection are displayed as per the database configuration in SYSCFG
46.	LWWebtop - Request option to turn autocomplete off for password.	LWWebTop has been enhanced to add an option "PasswordAutoComplete" in web.config. It can be used to turn on or off the auto-complete functionality
47.	MCSelect6 - Filtering and Sorting Options.	MCSelect application has been enhanced to support filtering and sorting options
48.	MultiSample Login : Expand Multicomponent	MultiSample Login application has been enhanced to display a list of analytes related to the selected Multicomponent
49.	MULTI-SAMPLE LOGIN - Create/Modify PR2 files	MultiSample Login has been enhanced to support creation/modification of PR2 files
50.	Turn on / off FIPS compliance via configuration parameter.	LABWORKS has been enhanced to turn on / off FIPS compliance via configuration parameter
51.	Attach Multiple Files to Sample or Analysis in Results Entry.	Result Entry - Sample Object Management has been enhanced to support attachment of multiple files to Sample or Analysis
52.	OPCEXP6 ability to export non numeric results	OPCEXP6 has been enhanced to allow for export of non-numeric results

53.	Import Container IDs through PostResults6.	Post Results 6 has been enhanced to support importing of Container ID
54.	PostResults6 - Posting Replicate to be Reportable Result.	Post Results 6 application has been enhanced to support posting of replicate as reportable result
55.	PostResult6 - Posting Violations.	Post Results 6 application has been enhanced to support posting of violations
56.	Allow comment import from Post Result 6 on analyte level.	Post Results 6 (PR6) application has been enhanced to allow comment import at analyte level
57.	PostResults6 - Excel calculation error - Next file fails to load	PostResults6 application has been enhanced so that excel calculations are performed as expected.
58.	Adding MCSelect6 option to ProcessScheduler - Analysis Display	Process Scheduler application - 'Analysis Display' view has been enhanced so that MCSelect6 option is available for selection
59.	Process Scheduler - Filters for Columns in Grid	Process Scheduler application has been enhanced to support filtering of the grid columns
60.	PS Sample Receipt Attach COC Persisted Group Button and Receive Samples Even if Not All Containers Received.	Process Scheduler application has been enhanced so that user can attach scanned COC to a group of samples during sample receipt. Also the application has been enhanced so that samples can be received even if all containers are not received.
61.	PS Schedule - Add Designated Printer to schedule setup, Print from Service	Process Scheduler has been enhanced to add designated printer to schedule setup and print to the selected printer
62.	Process Scheduler - Scheduled Time Frequency Logic improvement	An enhancement has been made in Process Scheduler application such that it is possible to add an extra analysis for a weekly Timed group frequency e.g. 1st Wednesday of Month
63.	Process Scheduler - List to Select Multiple COC Report Formats	Process Scheduler application has been enhanced so that user can view and select from Multiple COC Report Formats
64.	RESULT/ANALYSIS – Preparation Date/Timestamp	LABWORKS has been enhanced to support Analysis Preparation Date Time
65.	Integrating MCSelect and LWQAQCBatchBuilder.	LW QA/QCBatchBuilder application has been enhanced so that the filtered analytes from the samples are applied to the QC Samples that are created during the batching process
66.	QAQC Batching - SIMC Load Calculations can slow down batch creation	QA/QC Batch Builder application has been enhanced to improve batch creation performance
67.	QC Batching General Enhancements	QA QC Batch Builder has been enhanced so that Batch Description is displayed instead of the Batch ID in the Existing tab and Inventory Units column is added
68.	QC Batching - Multiple sets of qc samples	QA QC Batch Builder has been enhanced to support multiple sets of QC samples
69.	QC Batching - Move Ellipse to left and auto open	QC Batching Application has enhanced usability when a sample is selected to be the QC sample for the batch
70.	Importing replicate data always increments number of replicates and no default is used for previously logged analysis	A system wide default setting "DEFAULT_REPLICATE_POLICY" has been added for the default Replicate Policy in SYSMGR and added functionality so that empty replicate rows are filled before appending new replicate rows
71.	Add Validation User to Results Entry Mult-comp Edit Screen	Result Entry application has been enhanced to display Validation User and Validation Date on Multi-component Edit and Single Component Screens
72.	Result Entry - Analysis Code Sub-filtering	Results Entry application has been enhanced to display only the analysis codes assigned to samples based on "Filter by analysis assigned" configuration in Result Entry setup
73.	Improve Calculation Performance	Results Entry application has been enhanced to improve the calculation performance
74.	Add option for specifications to be =>=< OR <> only	Specification definitions have been enhanced so users are given more control over the specifications, allowing them to specify which conditions to be used for each specification (e.g. > vs >=)
75.	Result Entry Replicates Ability to select the latest replicate for In Process Control	Results Entry application has been enhanced to have the ability to select the latest replicate as result for In Process Control

76.	Attachments - link to web page in addition to file attachments	Sample Attachments have been enhanced to support link to web pages as well
77.	SAMPLE MODIFY - Update Analysis Order	Sample Modify application has been enhanced to allow the user to update the analysis order
78.	Sample modify ability to lock the Location code field	Sample Modify has been enhanced such that fields can be locked based on the configuration
79.	Sample Modify – Display prompt when there is data type mismatch for datetime field	Sample Modify has been enhanced such that User Fields having data type as "datetime" are validated
80.	SAMPLE MODIFY - IES CSV file	Sample Modify application has been enhanced to create files to record sample deletion and modification activities
81.	Zip Reports - Add to My Reports instead of Favorites	Zip Reports application has been enhanced to display the context menu as "Add to My Reports" instead of "Add to Favorites"
82.	NGII - WW SCADA Interface	NGII interface has been developed: WW SCADA Interface
83.	NGII - Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System: Support XLS format	NGII interface has been developed to support XLS format: Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System
84.	NGII - Perkin Elmer Clarus 580 GC (NEA)	NGII interface has been developed: Perkin Elmer Clarus 580 GC (NEA)
85.	NGII - Applied Biosystem - QuantStudio 6 Flex Real-Time PCR System	NGII interface has been developed: QuantStudio 6 Flex Real-Time PCR System
86.	NGII - Agilent GC	NGII interface has been developed: Agilent GC Instrument

### LABWORKS 6.9.

### What's New 6.9

Sr.No	Item	Description
1.	Support for CMDP	Support has been added for electronically submitting CMDP (https://cmdp.zendesk.com/) compliance reports.
2.	Add option to add/edit fields shown in SAMPSELCOMP6.OCX when samples are selected	Sample Selection Dialog used across LABWORKS application has been enhanced so that the fields displayed in the dialog can be selected via configuration.
3.	Chem Inventory - Purchase Requisition Refinements	In LWInventoryManagement application, "OVRD_EXP_DATE" privilege has been changed to "CINV_OVRD_EXP_DATE"
4.	Sample Login - Date/time picker	Sample Login date/time fields have enhanced usability
5.	CRGEN- Report Output Folder Enhancement	CRGEN has been enhanced to allow more control over which folder to store the report in, including support for nested folders.
6.	Add sort option to Process Scheduler login from ready to collect	Process Scheduler now allows you to right click on a "ready to collect" sample and sort the spreadsheet used to edit sample fields.

7.	Inventory Management - Edit Quantity during Mixture Creation	Inventory Management application has been enhanced to allow the user to enter the actual quantity used during Mixture creation.
8.	Sample Management - automatically calculate turn- around time	DataViewer application has been enhanced to display Sample Turn-Around Time
9.	USERHEAD.INITIALS field size increase to accommodate LDAP authentication	LABWORKS has been enhanced to support LDAP authentication for LDAP User IDs upto 256 characters
10.	Instrument Maintenance And Calibration (IMC) automatic warning email and automatic disable past due M/C instruments	Instrument Maintenance and Calibration application has been enhanced to support sending automatic warning email messages and disabling instruments for which maintenance/calibration due dates are elapsed.
11.	Allow users to set Process Scheduler initial status from new sample login	It is now possible to set Process Scheduler initial status from LWSampleLogin. System Manager SHOW_STATUS needs to be checked.
12.	Inventory - Add multiple of the same item in single operation	A new feature is added to support receive batch of inventory item.
13.	Process Scheduler - request username and password for data entry	Process Scheduler has been enhanced to request username and password for data entry
14.	Multicomponent Select (MCSelect6) addition to Process Scheduler Right Click	Added new SHOW_MCSELECT = YES to Process_Scheduler
15.	Sample Modify - configurable default update due date option	Sample Modify application has been enhanced to support configuration of the default update due date option e.g. "Always", "Never", "Prompt"
16.	eWorksheets - miscellaneous improvements	eWorksheet has been enhanced to configure in the template and validate the cells that must have values before being posted
17.	Filter by Department(s) for Analysis Validation	Application has been enhanced to support filtering by Department in Sample Selection dialog for 'Analyses Awaiting Validation' option.
18.	Process Scheduler scheduled groups are converting selected order of location codes to alphabetical order	Process Scheduler has been enhanced to display scheduled groups as per the order of location codes
19.	MULTI-SAMPLE LOGIN - Copy and Paste Support	Multi Sample Login has been enhanced to provide copy-paste support
20.	Optimization around LABOBJSPECINFO, LABOBJMAILLIST	LABOBJSPECINFO, LABOBJMAILLIST performance has been optimized
21.	eWorksheet - Completed changed back to In Progress	eWorksheet application has been enhanced to allow the user to change the status from Completed back to InProgress
22.	Result Entry - Sample Object Attachments	Result Entry application has been enhanced so that user can select the Sample Object Attachments from any folder available in the network.
23.	LWExplorer not showing time for user fields of datetime type	LWExplorer has been enhanced to display date as well as time for user fields of datetime type
24.	Spec Info Change Value Update Batch	QA QC Batch Builder has been enhanced to display the Update Batch button if a change is made to a previously created batch and a value in one of the Special Info Form fields is changed
25.	Restricting PS Sample Edit	An improvement has been made to implement "PS Sample Edit" privilege for restricting PS Sample Edit to privileged users
26.	Explorer .NET History - Form Resize doesn't resize contents	Improvement has been made in Explorer .NET History form to resize contents after resizing the form
27.	Result Entry- Start Date > End Date Prompt	In Result Entry application, Analysis Start Date > Analysis End Date message prompt is now displayed on click of "Save" button
28.	Add ability to group Prelogin group records in LABWORKS database	Added ability to group Prelogin group records in LABWORKS database
29.	Component Result Entry : "Save/Next" button that	Result Entry application has been enhanced to navigate to next Sample/Analysis Code directly from Component Result Entry screen

	automatically brings up the next item	for Multi-Component Analysis
30.	UX Improvements	UX improvements have been implemented for Result Entry, Multi- Sample Login applications
31.	Login date request for Process Scheduler	A bug has been fixed so that in Process Scheduler the collection date is maintained as it is upon right-click on the samples to login.
32.	eWorksheet enhancements	eWorksheet application has been enhanced to support Excel Macros, pick up Sample List from QA QC Batch, import Sample Header information, prompt Audit Reason and eSignature
33.	SPECINFO/LABOBJSPECINFO TABLE	LABWORKS application has been enhanced to support SPECINF table from previous versions
34.	Replicate Management - enhance audit trail capture	Replicate Management forms have been enhanced to capture mo audit trail data.
35.	Analysis Maintenance - Load button size not consistent with other buttons	Analysis Maintenance Load from Analysis button size is enhanced to be consistent with other buttons
36.	LABWORKS Explorer - Apply Design Guidelines	Design guidelines have been applied to LABWORKS Explorer application to improve the usability
37.	DataViewer - miscellaneous improvements (feedback from 2017 User Conference)	DataViewer application usability has been enhanced by displaying the sample comments and by providing enhanced result sorting functionality
38.	NWA - Add option to plot RawResult	SQC application has been enhanced to display Raw Result in NW chart based on the configuration
39.	ProcessScheduler - Improve Edit Schedule for large number of items	Performance of Process Scheduler - Edit Schedule functionality h been improved to support large number of items
40.	Batch Ownership	"My Templates" tab has been added in QA QC Batch Builder to provide a filtered view of templates for batch creation
41.	Trend Plot - Add option to plot RawResult	An improvement has been made for the user to select the Y axis label as Raw Result for the Trend Plot
42.	NGII QuantStudio 6 qPCR	NGII interface has been developed : QuantStudio 6 qPCR
43.	NGII Interface PKI Optima 7300 ICP	NGII Interface has been developed : PKI Optima 7300 ICP
44.	NGII Development - MASS DOH Sciex QTOF	NGII Interface has been developed : MASS DOH Sciex QTOF
45.	NGII Interface Thermo IC XLS	Added support for new interface: Thermo IC XLS
46.	NGII Interface CNL Mettler EasyDirect	NGII Interface has been developed : Mettler EasyDirect
47.	NGII Interface Waters Empower ARS	New NGII Interface developed: Waters Empower ARS Interface

### **What's New 6.8.5**

Item:	Internationalization Support
Description:	A bug has been fixed where LocalText data in the translation table was being cut at 50 characters.
Item:	Pre-login group save: displays the list of existing ones to avoid duplication
Description:	On clicking Save Pre-Login group, we now automatically display loaded 'PreLogin group' in the drop down for PreLogin Group Name.
Item:	Entering QA batch data using a file
Description:	Documentation has been added to explain how to import QA batch data using a file.
Item:	Special Information Form for Analysis Code not functioning at Results Entry
Description:	A bug has been fixed where the special information form for analysis codes was not functioning in results entry.

Item:	Audit Trail reasons - back to newest at top
Description:	Audit Trail has been enhanced to sort by newest reason on top by default.
Item:	New QC Batching Display with Oracle DB
Description:	A bug has been fixed where some users would get a blank screen while trying to create a new QC batch in our new QC batch builder application.
Item:	Single Component Instrument Interface PR6 File with previous results
Description:	A bug has been fixed in PostResults6 where input files from single component instrument
Description.	interfaces with records for multi results of samples were not being.
Item:	Update Mobile Sample Collector documentation with a troubleshooting section
Description:	A troubleshooting section has been added to our Mobile Sample Collector documentation to
Description.	capture common connection errors.
Item:	Data imports via PostScr6 and PostMcr6 overwriting ANALYSIS table RADUEDATE &
item.	ADUEDATE fields
Description:	A bug has been fixed in PostScr6 and PostMcr6 where data imports from those applications were overwriting fields RADUEDATE and ADUEDATE of ANALYSIS
Item:	Applications get lost in the screen
Description:	A bug has been fixed where application screens would get lost in the screen when going from a
Description.	multi-monitor setup to a single display setup.
Item:	Personnel Training FullTime/Part Time are inverted in the reports.
Description:	A bug has been fixed where full time and part time information was being erroneously reported in
Description.	Personnel Training reports.
	refsoluter training reports.
Item:	LABWORKS EXPLORER- Template Configuration\Sample Comments
Item: Description:	
	LABWORKS EXPLORER- Template Configuration\Sample Comments
	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view
Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.
Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.
Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS
Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.
Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS  A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.  MOR report - add macro function similar to excel calculation setup
Description:  Item: Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS  A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.
Item: Description:  Item: Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS  A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.  MOR report - add macro function similar to excel calculation setup
Item: Description:  Item: Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS  A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.  MOR report - add macro function similar to excel calculation setup  A macro function has been added to the MOR reporting tool.
Item: Description:  Item: Description:  Item: Description:  Item: Description:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns.  SQC Charts from COA not updated for NWA 6.2  SQC Charts from COA have been updated to work with NWA version 6.2.  PostResult 6 not posting RLTSOURCE to LABWORKS  A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.  MOR report - add macro function similar to excel calculation setup  A macro function has been added to the MOR reporting tool.  LWDataServices - Scandaemon app not performing all Excel Calculations - United Soils  A bug has been fixed in 6.7 where Scandaemon was not performing all Excel Calculations.
Item: Description:  Item: Description:  Item: Description:  Item: Description:  Item:	LABWORKS EXPLORER- Template Configuration\Sample Comments  LABWORKS Explorer has been enhanced to allow users to add sample comments to the grid view columns. Г.,	
Item:	My Preferences issue on LWDesktop Menu
Description:	A bug has been fixed where LWDesktop would not properly load or display the menu when configuring the user's Desktop menu under My Preferences.
Item:	Sample Collection App- Collection Date Picker
Description:	A bug has been fixed in the mobile sample collection app, where the system date/time would be used for the collection time instead of the selected date/time.
Item:	Sample Collection App- PS Status
Description:	A bug has been fixed where the process scheduler status for samples collected with the mobile collection app were not properly moved from "ready to collect"
Item:	Sample Collection App- Creating collection group in PS
Description:	Sample Collection App now allows users to select one or more location codes and provides a context menu for Sample Collection group creation.
Item:	Units with number in leftmost character position do not copy from analysis code to result entry
Description:	A bug has been fixed where units with number in leftmost character position would not copy from analysis code to results entry.
Item:	Possibility to have a default string result like "Not Detected" for single components analysis
Description:	It is now possible to specify a default result string (e.g. "Not Detected") for single component analysis.
Itom:	Cross reference search for null value issue
Item: Description:	Cross reference search has been enhanced to allow for more search functions like "does not contain".
Γ.,	
Item:	Add reason to audit records for changes to analysis and location codes  Audit records can now be tracked for changes to analysis and location codes.
Description:	Addit records carrillow be tracked for changes to analysis and location codes.
Item:	Cannot restrict document settings in "new" Sample Login
Description:	"LOGTEMPLATESETUP" privilege now applies to LABWORKS Reporting section of Sample Login Templates, meaning it is now possible to restrict document
Item:	Allow "Check all" option in dataviewer analysis list view.
Description:	Data Viewer now allows for better selection/view options in analysis list.
Item:	Personnel Training not filtering Result Entry
Description:	Results Entry has been enhanced so that analysts cannot enter data for analysis they have not been approved / certified for.
Item:	Allow selection of multiple analyses per trainee in Personnel Training
Description:	Results Entry has been enhanced so that analysts cannot enter data for analysis they have not been approved / certified for.
Itom:	Parsannal Training not filtoring Posult Entry
Item:	Personnel Training not filtering Result Entry  Added functionality to select multiple analysis per trainee using CTRL or SHIFT.
Item: Description:	Personnel Training not filtering Result Entry  Added functionality to select multiple analysis per trainee using CTRL or SHIFT.
	·
Description:	Added functionality to select multiple analysis per trainee using CTRL or SHIFT.
Description:	Added functionality to select multiple analysis per trainee using CTRL or SHIFT.  Multicomponent multiple partial result entry without result modify privilege A new privilege has been added to control whether result merges (RESULTMERGE) can be

Description:	Assign Analyst and Assign Instrument in Process Scheduler is filtered according to personnel training and Instrument Maintenance and Calibration data.
	New Carrella Larin Crash or after unlanding called a grown
Item:	New Sample Login- Crashes after uploading collected group
Description:	A bug has been fixed in LWSampleLogin where it would crash while uploading a collected group from the Mobile Sample Collection App.
Item:	Replicate Management Enhancements
Description:	Replicate Management now posts replicate results even if some of the selected replicates contain a null value (the empty values are simply not taken into consideration during the post).
Item:	AutoLogin640 PQL Value Not Posting
Description:	A bug has been fixed in AutoLogin640 where the PQL value was not posting correctly.
Item:	PR6 Storing Calculated Results Bug
Description:	A bug has been fixed in PostResults6 where results were being posted but not calculated.
Item:	Sample Modify - Analysis Order
Description:	A bug has been fixed in Sample Modify where removing and adding samples, the analysis
Description.	ordering would sometimes get mixed up when there were duplicate values for the same ANUM.
Item:	PROCESS SCHEDULER - PS status colors by analyses
Description:	Process scheduler status colors have been updated to use the updated color scheme for sorting
2 000р	by analysis.
Item:	Replicate Management - getting CALCFROMREP as custom result
	Replicate management has been enhanced so that a tooltip message is displayed to the user and
Description:	a message is logged to the error log when values under the MDL range are posted.
Item:	PostResults6 - silently closing when bad parameters are specified
	PostResults6 has been enhanced to display an error message when bad parameters are detected.
Description:	Posinesuliso has been enhanced to display an error message when bad parameters are detected.
Item:	PostResult6 - NORESULTCOND not applying if MDL is in CSV file
Description:	A bug has been fixed where if MDL was in CSV file, PostResults6 (running from scandaemon as service) with NORESULTCOND would compare result with MDL and if it was less than MDL it would not post raw data.
Itom:	AutoQualifier6 returns the string "Null" after removing an illegitimate qualifier
Item:	A bug has been fixed where if a user entered an auto qualifier field in results entry and that value
Description.	was not needed when applying autoqualifier6, then that value would be overwritten with null.
Item:	Enhance analysis reference input to use a picklist instead of a free form input
Description:	Analysis reference input has been enhanced to use a picklist instead of a free form input to reduce
Booonplion	user error.
Item:	eWorksheet Operation Items - WYDEQ
Description:	Two bugs have been fixed in eWorksheets where data was not being properly stored / loaded, and
	some common excel functions would not work under certain circumstances.
Item:	Process Scheduler - Resources Tab - messed up display when different users have the same name
Description:	Process scheduler has been enhanced to better handle the display of different users with the same first and last name under the resources tab.
Item:	Replicate Management - Date set from policy to 12/30/1899
	, , , , , , , , , , , , , , , , , , ,

1	
Description:	A bug has been fixed in replicate management where the replicate date set from policy was defaulting to 12/30/1899.
16	
Item:	PS Sample Login limit the Coll Date to calendar input
Description:	LWSampleLogin has been enhanced to allow admins to limit the collection date to calendar input to minimize the risk of wrong date entry by using VALID_DAYS_BACK and VALID_DAYS_FORWARD setup parameters.
Item:	Issue with displaying PQL in Results Entry
Description:	A bug has been fixed where if MDL was in CSV file, PostResults6 (running from scandaemon as service) with NORESULTCOND would compare result with MDL and if it was less than MDL it would not post raw data.
Item:	PostResult6 - NORESULTCOND not applying if MDL is in CSV file
Description:	A bug has been fixed in Results Entry where PQL would only display the first 8 characters instead of its full length string.
Item:	Replicate Management - enhance audit trail capture
Description:	Replicate Management forms have been enhanced to capture more audit trail data.
Item:	Bug found during Testing of ALLOW_CALC_RESULT_MANUAL_ENTRY function changes Undo
Description:	Yellow colour not displayed on Result Entry screen for components (dependent analytes) having pending replicate inputs
Г.,	
Item:	Error Log growing very fast
Description:	A bug has been fixed in ExpSpr2XLS application where it was causing the error log to continuously grow due to an infinite loop in the code.
Item:	KY - LABWORKS 6.8 - Right Click Pop Up Menu in Result entry
Description:	A bug has been fixed where certain right click menu items in results entry were not properly being triggered.
Item:	OPCEXP6 ability to export non numeric results
Description:	OPCEXP6 has been enhanced to allow for export of non numeric results.
	·
Item:	Stepped Query Privileges Not Enforced in Results Entry
Description:	A bug has been fixed in results entry where stepped query privileges were not being properly enforced.
Item:	Allow Export of eWorksheet history to Excel
Description:	It is now possible to export eWorksheet history to Excel so data can be externally audited.
Γ.	
Item:	PostResults6 - Report all not including all components when \$CODE datafile doesn't include all components
Description:	A bug has been fixed in PostResults6, where report all would not include all components when \$CODE data file didn't include all components.
Itom:	Analysis assignment window does not properly resize
Item:	Analysis List did not occupy the real estate when bottom grid was collapsed
Description:	Trinary side Libraria Troc occupy the real estate when bottom glid was collapsed
Item:	"Define QA Analysis" ToolTip does not disappear till "QA Parameter Group Definition" window is closed.
Description:	Wait function for "QA Parameter Group Definition" window launch from Analysis Maintenance application was removed, so that the tool tip disappears after "QA Parameter Group Definition" window launch.
Itom:	Process Schodular allows cample deletion without deletion privileges
Item:	Process Scheduler allows sample deletion without deletion privileges  A bug has been fixed in Process Scheduler, where it was not honoring the sample deletion
Description:	A bug has been fixed in Process Scheduler, where it was not nononing the sample deletion

	privileges under certain usage scenarios.
Item:	Right click once doesn't display menu, need to click twice.
Description:	A bug has been fixed in Dataviewer, where right click wasn't working to the analyte menu for
Description.	analytes under Multi Component.
Item:	PR6- For invalid DB name in command, Stack overflow exception is displayed instead of correct
Danasintias	error message on command line.
Description:	A bug has been fixed in PostResults6 where the application would fail with a stack overflow exception error when an invalid DB name was provided.
Item:	Sample Collection App- Uploading Results Failing
Description:	A bug has been fixed in Process Scheduler, where it was not honoring the sample deletion
	privileges under certain usage scenarios.
Item:	QA/QC batching custom statuses - add analysis validation rules
Description:	Administrators now have more control over transition rules to custom QA/QC batch statuses (e.g.
•	batch status depends on sample and / or analysis statuses to match a certain state criteria).
It a sec	CRGEN EXPORT_REPLACE function Issue with Commas in Field
Item: Description:	A bug has been fixed in CRGEN where CRGEN's EXPORT_REPLACE function did not allow for
Description.	commas in field.
Item:	Sandia Not Saving Comments Edited in Validation Module with 6.8/Oracle
Description:	A bug has been fixed in the validation module where comments were not being properly saved.
Item:	6.8 Results Entry Performance
Description:	A performance issue has been resolved in results entry, where load and save times had degraded
Booonpaon.	upon 6.8 release (caused by the introduction of AREF lookups and replicate management).
Item:	LWDataViewer errors on Launch with Custom Specifications Defined
Description:	A bug has been fixed where LWDataViewer would refuse to open if the database had custom specifications.
Item:	SampleLogin - Load Prelogin Group needs to update analysis information
Description:	SampleLogin has been enhanced so that, when loading the prelogin group, details for the analysis
	are loaded from the current definition and not the saved group.
Item:	NGII Configurator Load Performance
Description:	NGII Configurator load performance has been enhanced.
•	
Item:	PS status colors: Bright White as font color is not correctly displayed instead black is displayed.
Description:	Also Legend's color doesn't match with configured color  A bug has been fixed in Process Scheduler status colors where bright white fonts were being
Description.	displayed in black and legend color definition was not being honored.
Item:	eWorksheet Available Samples Issue
Description:	A bug has been fixed in eWorksheets where samples could not be added again after they were added to an eWorksheet that was deleted.
<u> </u>	added to all evvolvalicet that was deleted.
Item:	Result Entry- Editable Raw Result
Description:	Results entry has been enhanced to let users edit raw results when they have the necessary
	privilege to do so.

Item:	Modify Last Alphabetical Component Result after Posting with PR6
Description:	A bug has been fixed where editing the last alphabetically sorted component in the RESULT table after uploading data with PR6 resulted in an error.
Item:	6.8 Oracle Script for Anl_list.aref wrong
Description:	The 6.8 Oracle schema update script has been enhanced to better handle AREF changes during the 6.8 upgrade.
Item:	NGII Engine Enhancement - Support multiple records for same sample in a single input file to be considered as replicates
Description:	NGII Engine has been enhanced to allow for turning multiple records for same sample in single input file into replicate data.
Item:	QA/QC batch & Result Entry template: possibility to order samples by BATCHSAMPS. BATCH_NAME, BATCHSAMPS.BATCH_INDEX
Description:	A configuration parameter has been added to define the sorting order of QA/QC batches in results entry templates (by sample id vs by QA/QC batch order).
Item:	CNL New Sample Login Col Date Bug for Canadian-English Date/Time Format
Description:	A bug has been fixed where collected date was being stored and displayed in the wrong format.
Item:	Calculating Results where input variables are in scientific notation format
Description:	A bug has been fixed where calculating results came from input variables in scientific notation format, the analysis result would be incorrectly set to ND.
Item:	Search Function in Results Entry Spreadsheet not Working
Description:	Search function (ctrl f5 shortcut) has been returned to results entry data entry, so users can easily find sample ids for quicker data entry.
Item:	Replicate Management - Bad vertical axis when using floats
Description:	User experience has been enhanced in replicate management form to more elegantly plot the vertical axis representation of high ranges between min and max values of replicates.
Item:	QA Batch Workflow Management Issue
Description:	A bug has been fixed in the QA Batch Workflow Management, where batches would get reported with a draft state instead of the expected pending state.
Item:	When parsing results for elements that have multiple isotopes. The second element isotope result is being doubled
Description:	Bug fixed when parsing results for elements that had multiple isotopes, the second isotope result would be doubled.
Item:	Result Entry import of PostResult6 CSV format does not import dates/times
Description:	An issue has been resolved in issue in the Legacy interface for instrument type PR6 (.CSV) (Lwbz107_6.exe). When input PR6 file contained no data in last comment, the interface would not load results for the analysis.
Item:	COA Headers erasing in database when editing header cells/custom forms
Description:	A bug has been fixed where Excel COA form fields would come up blank in the UI and then get overwritten as blank during a save.
Item:	LWMultiComponentTransfer does not parse file which contains single quote in File name.
Description:	Bug fixed where LWMultiComponentTransfer was not properly parsing files with single quotes in filename.

Itomi	Spacinfo Tab Order
Item: Description:	Spec Info Tab Order  A bug has been fixed where the Spec Info form tab order was not being honored as defined in the
Description:	designer.
	a designation of the second of
Item:	AutoQualifier Bug in 6.8
Description:	AutoQualifier logic has been revised and improved.
Item:	Sample Collection App - login record file being lost after receiving collection group
Description:	A bug has been fixed where the login record file was being lost after receiving samples back at the
	lab from the mobile collection app.
Item:	Standard calculations do not complete but Excel calculation with same formula work
Description:	A bug has been fixed where standard calculations were not being properly calculated.
Description.	77 bug had book kinds dialitate dalatations were not being properly calculated.
Item:	QC Batch Error with ColDate Displayed
Description:	A bug has been fixed where the QC batch template would not display samples if one of the
	columns was "Collection Date" or "Submit Date".
Ги	DOOTDEOUILTOO
Item:	POSTRESULTS6 exporting result file source using Excel format
Description:	POSTRESULT6 has been enhanced to allow for importing of the RLTSOURCE field when processing excel files.
	processing excernies.
Item:	LABWORKS calculations not firing and slow down loading result entry.
Description:	A bug has been fixed where LABWORKS calculations were not properly firing and result entry was
	loading very slow.
Item:	Process Scheduler - can't read white on yellow
Description:	A bug has been fixed in Process Scheduler where some white text was being displayed on top of a yellow background, making the data unreadable.
	yellow background, making the data diffeadable.
Item:	ExportData only works with one attached object
Description:	A bug has been fixed where ExportData was only exporting with one attached object.
Item:	Newly created Batch is in NULL status. Workflow Architect has no such status.
Description:	A bug has been fixed where newly created QAQC batches would end up with a null status after
	they were created.
14	Operate Madiffy Days Time Leaves
Item:	Sample Modify Due Time Issue
Description:	A bug has been fixed in Sample Modify where it was not properly saving due time updates.
Item:	Postresults6 not firing Excel calculation
Description:	A bug has been fixed in PostResults6 where it was not properly firing Excel calculations.
Description.	1
Item:	Allow users to set Process Scheduler initial status from new sample login
Description:	It is now possible to set Process Scheduler initial status from LWSampleLogin.
	The second of th
Item:	In current 6.8 update, I see records for eWorksheet workflow, but they don't show up in Workflow
	Architect.
Description:	A bug has been fixed in Workflow Architect, where eWorksheet workflow template was not
	showing up in architect.
Item:	Certain LABWORKS Calculations Do Not Calculate and Forces Module Into Not Responding
Description:	A bug has been fixed in 6.8.0.318, where certain LABWORKS calculations were not triggering and
Description.	the analysis maintenance module would stop responding during configuration of calculations.
	, and the second

Item:	Analysis calculation with a zero value
Description:	A bug has been fixed where a zero calculation caused Labworks calculations not to run.
Item:	CAS Number (CASN) Field Not Exporting
Description:	A bug has been fixed where the CAS number was not being properly exported when exporting
<u> </u>	samples or generating crystal reports.
Item:	New Sample Login # Tests Due Date Not Populating
Description:	A bug has been fixed where #test due dates was not properly being populated.
Item:	COA - Limit COA History Range
Description:	COA Application supports new INI Entry, CUST_BASE_HISTORY_DAYS = When this value is in
·	place, the COA History is limited to this date range.
14	
Item:	Standard Calculation Issue
Description:	A bug has been fixed where standard calculations were sometimes failing and processing very slow.
Item:	Replicate Management - Multi Component Transfer replicate conflict resolution
Description:	A bug has been fixed when importing replicate data from multi component transfer, the analyte is
	not being calculated with the replicate's policy
Item:	LWSampleLogin - analysis assignment window does not properly resize
Description:	A bug has been fixed where analysis assignment window not having scrollbar on LWSampleLogi application.

### What's New 6.8

Item:	Replicates Support
Description:	LABWORKS now includes support for replicate datasets. Record multiple datapoints, graphically
•	analyze the data and set up policies to act on the data.
Item:	Cross Reference Search Location Codes selection when LocDescr contains " fails
Description:	Cross Reference Search now accepts using " (quotes) in LocDescr field.
Item:	Do not allow saving owner group names with embedded space(s)
Description:	OwnerGroup names now allow for embedded spaces.
Item:	POSTRESULT6 divide by zero error with standard calculation
Description:	Fixed "divide by zero" error with standard calculation in PostResult6
Item:	PR6 100% CPU when processing input file
Description:	Fixed condition in PostResults6 where it would hit 100% cpu utilization when processing certain
·	input files.
Item:	SAMPLE MODIFY- ANUM ISSUE
Description:	Small bug has been fixed where ANUM did not properly update when users removed and added
·	analysis to samples.
Item:	Invoicing behaviour changed, wait's for each to print

Description:	Reverted invoicing behavior so that it isn't necessary for the user to wait for report to print before continuing.
Item:	Process Scheduler not allowing use of all sample statuses
Description:	Known issue: an incorrectly setup .ini can keep users from managing samples in different statuses. To fix, a valid Labworks.ini file must be used.
Item:	SAMPSELCOMP640 LB list with last line not fully displayed leading to scroll down instead of
iteiii.	select
Description:	Fixed small bug in sampleselComp640, where clicking the last item was resulting in a one line scroll instead of selecting the item.
Item:	LWLicenseManager - problem with dashes in ctl filename
Description:	License Services now generate an actionable error message when a bad license filename is detected.
Item:	PostResults6 Calculations: "Mod date" for result updated when result for analysis not included in
ILCIII.	Calculation is updated
Description:	PostResults6 issue in LABWORKS 6.7 has been fixed where the "Mod date" for the result was
	being updated when result for analysis is not included in Calculation.
Itami	LoginOwner6.exe Not Working with v6.6
Item:	Error 13 on post login program LoginOwner6.exe has been fixed.
Description:	Effor 13 on post login program LoginOwnero.exe has been fixed.
Item:	Process Scheduler Field Mappings to PSLogin and PSEdit
Description:	Process Scheduler user defined fields were not being displayed and recorded when logging
2000	samples from Process Scheduler using the PS Login program.
Item:	PostResults6 Calculations execute when no new data is uploaded
Description:	Bug in LABWORKS 6.7 where PostResults6 calculations would execute when no new data was
Description.	uploaded has been fixed.
It a see .	MONTables van ast grandel nomileted for non-letin sharesters (Dussian Januarya)
Item:	I18NTables.xsp not properly populated for non latin characters (Russian- Japanese)
Description:	I18NTables.xsp service pack has been enhanced with non-Latin characters (e.g. Russian, Japanese,).
Item:	AutoQualifier Issue and Bottle Codes Null data to RESULT table at SARA LW 67
Description:	Bug where AutoQualifier was posting null bottle code data to results table in LABWORKS 6.7 has
Description.	been fixed.
Itom:	PostResult6_RLTSOURCE: "POSTMCRO" file containing double quotes converted to .bad file
Item:	A bug has been fixed where, when "POSTMCRO" file format contained double quotes, the data file
Description:	was not being properly converted to .bad file. Also, "results" and "Ritsource" values were not being posted for sample.
14	DO Coming Complete accepted with each look party.
Item:	PS Service - Samples created without Login Batch
Description:	A bug has been fixed in LABWORKS 6.7 where samples were being created without a login batch when logged through Process Scheduler Service's scheduled auto-login feature.
Item:	QA Batch - Changing the QA sample in the QA Batch builder reassigns QA sample to all samples
Description:	Fixed a bug when changing the QA sample in the QA Batch builder reassigned QA sample to all
թеցույինու.	samples when it should only assign to one.
Item:	Sample Modify: Issue related to "Due time" from Sample Modify application
Description:	A bug has been fixed where "Due time" was not being properly calculated for new tests based on configuration for "Hours" in analysis code (ACODE).

Item:	Multi-Sample Login: Due Time not calculated when "Hold Hrs and Mins" added from analysis
nem.	maintenance application
Description:	Due Time was not being calculated correctly when "Hold hrs and mins" were added from analysis maintenance application.
Item:	NGII PMDMicroDist: Time displayed in "Result table" not displaying Sec "00.000" part when format is "hr:min:sec.000" in the file
Description:	Time displayed in "Result table" was not displaying "Sec.00.000" part when format is "hr:min:sec.000"
Item:	Process Scheduler Download samples from calendar
Description:	A bug has been fixed where samples could not be downloaded from Process Scheduler's calendar.
Item:	LWDesktop - menu not copied on user clone
Description:	A bug has been fixed in LWDesktop where user menus were not properly being copied when cloning a user.
Item:	Specifications Checking
Description:	A bug has been fixed where results entry was not properly flagging specification violations.
Item:	Sample Modify User Defined Field Date Time Issue
Description:	A bug has been fixed in sample modify where the field width was being set to 19 for user defined fields of data type DateTime.
Item:	Sample Due Date Time Not Calculating Time LW 6.7 MultiSample Login
Description:	A bug has been fixed where the sample due date was not calculating the time part on multi sample login.
Item:	Multi-Sample Login: Due time not calculated when sample logged In after opening and closing "INI Editor" application from desktop
Description:	A bug has been fixed in multi-sample login where due time was not calculated when sample logged was in after opening and closing "INI Editor" application from desktop.
Item:	QAQC Batching modifying Analysis Price
Description:	Issue in LABWORKS 6.6 where QAQC batching was modifying analysis price has been solved.
Item:	Prelogin groups from 6.5.762 can't be loaded into 6.7
Description:	Prelogin groups created in version 6.5 would not work in version 6.7 after an upgrade due to the addition of a mandatory new field RHOLDDAYS in version 6.7.
Item:	New Sample Login Group Test Code Analysis Number Issue
Description:	A bug has been fixed where the group test orders in new sample logins were not being preserved.
Item:	Results Entry Display Calculated Results for Tests Not Ordered on Sample
Description:	A bug has been fixed where Results Entry Display was calculating results for tests not ordered on the sample.
Item:	PS Service unable to launch programs
Description:	A bug has been fixed in Process Scheduler where it would not launch programs when running as a service.
Item:	Sample Modify 200 sample limitation
Description:	A bug has been fixed in Sample Modify where it would refuse to load the spreadsheet when a very large number of samples was selected.

Item:	Sample Modify crashes when analysis count too high
	A bug has been fixed in Sample Modify where it was causing the application to crash when
Description:	modifying a very large number of analysis.
Item:	Failure to update [BATHEAD] after change in Control Sample assignment in new QAQC Batching tool
Description:	Fixed bug in 6.6 where [BATHEAD] field failed to update after change in Control Sample assignment in new QAQC Batching tool
lt a sa	CDCENT LIMIT cure b Cruck 4 MDB file extension issues
Item:	CRGEN - LWLaunchCrys64 MDB file extension issues  A bug has been fixed where CRGEN was only supporting .MDB extensions when generating
Description:	reports with crystal reports versions other than XI.
Item:	Reporting User defined specifications for multi-component carries over from previous acode
Description:	Added new SYSMGR Entry, REPORT_USE_FIRST_MC_SPEC Type Boolean. When true, for a pending Multicomponent analysis, the program will use the specifications from the first analyte.
Item:	Menu Configurator crashes
Description:	Menu Configurator has been enhanced to gracefully handle corrupt menu data.
Item:	Cannot click on MLT files in Multi Sample Login. Can type in template name and load it.
Description:	A bug has been fixed in Multi Sample Login where it was keeping the user from selecting from available MLT files.
Item:	Process Scheduler service not printing BarTender labels
Description:	A bug has been fixed in Process Scheduler where it would not properly print BarTender labels when running as a service.
Item:	Analysis Comments exported as 0 in ACMT when "Analysis Comments" are selected in the CEF
Description:	A bug has been fixed where analysis comments were being reported as "0" in "ACMT" when "Analysis Comments" were selected in the CEF.
Item:	IwwEditCEF6.exe loses control when minimized
Description:	A bug has been fixed in LWWEditCEF6.exe, where it could not be restored after being launched from LWDesktop and minimized.
Itami	Dragge Schoduler By Analysis incorrect filtering
Item: Description:	Process Scheduler By Analysis incorrect filtering  A bug has been fixed in Process Scheduler where it was requesting the user for an ADEP
Description.	selection instead of an ACODE one when clicking on the suspension points button.
Item:	ScanDaemon Service doesn't process file if user temp path is Windows location
Description:	A bug has been fixed in ScanDaemon Service where it was not properly processing NGII instrument files if user temp path was set to the Windows temp location.
Item:	eWorksheet Post Results File - Comma and Quote Delimited
Description:	eWorksheet Post Results File format has been enhanced to delimitate fields with quotes when needed.
Item:	NGII Interface dll Security Issue
Description:	An internal configuration parameter has been changed to fix an NGII Interface dll security error message that kept NGII interfaces from running under certain Microsoft Windows security policies.
Item:	Process Scheduler Service - Logbatch grouping not same as desktop
Description:	A bug has been fixed in Process Scheduler where it would log each PSID/Group in its own log batch when running as a service.
Item:	6.8 Beta Feedback - Privileges issue
	1

Description:	A bug has been fixed in LWDesktop's CONFIGDESKMENU privilege assignment screen.
Item:	6.7.0.233 internal calculation issues
Description:	A bug has been fixed (LABWORKS build 6.7.0.233), where internal calculations where not
	properly triggering on results entry.
Item:	Internal calculation engine order of precedence different between setup and result entry
Description:	A bug has been fixed where the internal calculation engine order of precedence was different
Booonpaon.	between setup and result entry.
ltom:	PR6 File Import Results Entry -Existing Results Screen
Item: Description:	A bug has been fixed where data was not being displayed correctly in PR6 when resolving import
Description.	conflicts.
Item:	Internal calculation engine order of precedence different between setup and result entry
Description:	A bug has been fixed where the internal calculation engine order of precedence was different between setup and result entry.
	Donnest Country.
Item:	PR6 File Import Results Entry -Existing Results Screen
Description:	A bug has been fixed where data was not being displayed correctly in PR6 when resolving import conflicts.
	COTINICIS.
Item:	Single Component Instrument Interface PR6 File with previous results
Description:	A bug has been fixed in PostResults6 where input files from single component instrument
	interfaces with records for multi results of samples were not being displayed correctly.
Item:	Loc List Maint – modified loc code blanks out the tree view. Should behave as Anl List Maint
Description:	Improved Location List Maintenance application so the navigation tree in the left no longer
	collapses when changes are made to a location code.
Item:	AENT not correctly exported for reporting while AEND is OK
Description:	A bug has been fixed where when the fields ZEND and AENT were exported for a report (export
Безсприон.	report) the date would be correctly exported but the time was being incorrectly set from the analysis level.
Item:	Sample modify field width truncation inherited from 6.6 or earlier database
Description:	A bug has been fixed where Sample Modify field truncation could be inherited from previous
Description.	database versions.
II.	Connelle Levin Const Boots and have 1 11 11 11 11 11
Item:	Sample Login Copy Paste analyses doesn't seem to be recognized
Description:	A bug has been fixed during the copy / paste of multiple analysis in LWSampleLogin.
Item:	PostResult6 not importing all values (results and MDL) from files
Description:	A bug has been fixed in LABWORKS 6.7 where PostResults6 wasn't properly importing some
·	input values (like dilution factor and MDL).
Item:	Updatetool Error on Oracle DB
	·
	SamPreLoginGrp table in Oracle based systems.
It a man	Draces Cahadular on Comica Nat Adding From VIII Timed Comments

Item: Description:  Item: Description:	Updatetool Error on Oracle DB  A bug has been fixed in LABWORKS's migration tool where it would fail while updating the SamPreLoginGrp table in Oracle based systems.  Process Scheduler as Service Not Adding Every X Hr Timed Group samples  A bug has been fixed where Process Scheduler Services was not adding timed group samples

Item:	6.8 Beta Feedback - LWLogin Mail list selector
Description:	LWLogin has been enhanced to allow for sorting of data and keep selections between searches.
Item:	Localization Support - regional settings issue with decimal delimiter
Description:	LABWORKS now supports regional settings for decimal delimiters.
Item:	LWSampleLogin - Selection of label formats not correct
Description:	A new label configuration type (3) has been added to LWSampleLogin.
Item:	QA Batching completed tests not working
Description:	A bug has been fixed where the QA batching application returned "no samples selected" if creating
	a QA batch with completed samples.
	Orange Markita, Orlandation Due Times for New Torte Added
Item:	Sample Modify - Calculating Due Times for New Tests Added
Description:	A bug has been fixed where sample modify would default a due time to 23:59 when adding a new
	test.
Item:	Sample Modify: "Due time" for existing analysis not displaying based on "submittal date" but
item.	displaying based on collection date
Description:	A bug has been fixed in Sample Modify where due time was not been properly displayed.
2000	
Item:	LABWORKS 6.6 BATSAMPS not updating when adding samples to existing batch
Description:	A bug has been fixed in LABWORKS 6.6 where BATSAMPS was not updating when adding
2 ccciiptioni	samples to an existing batch.
	·
Item:	Multi Sample Login will login sample but not the sample's analysis order
Description:	A bug has been fixed in Multi Sample Login where it was not logging the sample with its submitted
	analysis order.
Item:	Multi Component Transfer does not import Start Date, End Date, Analyst and Unit
Description:	A bug has been fixed where Multi Component Transfer was not properly importing Start Date, End
	Date, Analyst and Unit properties.
Item:	LWExplorer Display History extracts only the "One Sample Point" data, even in All Sample Points
	A bug has been fixed in LWExplorer where the Display History feature would only extract one
Description:	sample point of data, even when browsing all sample points.
	cample point of data; oron when browning all cample points.
Item:	PR6 not importing POSTMCRO text files if multicomponent names contain quotes
Description:	Fixed a bug where PR6 was not importing POSTMCRO text files if multicomponent names
2 ccciiptioni	contained quotes.
Item:	6.7.0.150 POSTRESULTS6 POSTSCRO import ASTATUS failure
Description:	A bug has been fixed where ASTATUS value was not being properly imported when using
	POSTRESULTS6 and POSTSCRO to import data.
Item:	PR6 Storing Calculated Results Bug
Description:	A bug has been fixed in PostResults6 where results were being posted but not calculated.
Item:	PostResult 6 not posting RLTSOURCE to LABWORKS
Description:	A bug has been fixed in PostResults6 where it was not properly posting RLTSOURCE.
Item:	Data imports via PostScr6 and PostMcr6 overwriting ANALYSIS table RADUEDATE &

	name as a ResultsEntry template would corrupt the ResultsEntry Template.

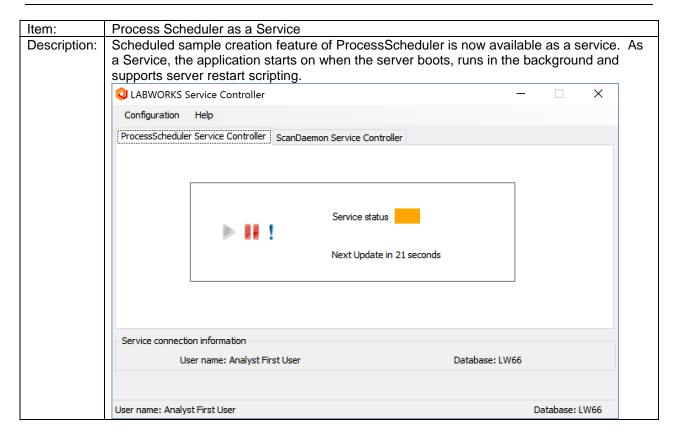

Item:	Net DMR - NetDMR export to CSV field for Frequence of Analysis is tied to
December	DMR_FINALDETAIL.RFRQ_ANL1 instead of DMR_FINALDETAIL.RFQ_ANL1
Description:	DMR: Corrected Frequency of Analysis Calculation/Reporting
Item:	LWMigrationUtility - Timeout issue with AUDITTRAIL when 53M records are in
	the table
Description:	Platform: Enhanced LWMigrationUtility to handle substantial number of
	AuditTrail records
Item:	Process Scheduler - Download from calendar SQL statement error with SQL
1.0	Server Compatibility Level older
Description:	ProcessScheduler: Corrected SQL Error on Calendar Download.
Item:	Deculte Entry Conv. Deculte/Deste Deculte acts prices to #0 for posted test
item.	Results Entry - Copy Results/Paste Results sets prices to \$0 for pasted test codes
Description:	ResultsEntry: Corrected AnalysisPrice set to zero issue when copy/paste from
	one sample to another.
Item:	Drococo Cohodular Improvo color cohomo
Description:	Process Scheduler - Improve color scheme  ProcessScheduler: Improved Color Scheme. Improve usability by tuning colors.
Description.	Processocileduler. Improved Color Scheme. Improve dsability by turning colors.
Item:	DMR - Conversion Factor not applied for parameter
Description:	DMR: Conversion factor not applied to results.
Item:	ScanDaemon services needs same run program features as VB6 app
Description:	ScanDaemonService: Add capablity to run post upload/post process programs.
Item:	ProcessScheduler service needs Recover option for when restarting
Description:	ProcessSchedulerService: Added option to start from last update time.
I to me.	DD0 have and a second form
Item:	PR6 hanged sometimes
Description:	PostResults6: Corrected issue with LABWORKS calculation that would cause
	PR6 to Hang: Properly evaluate if calculation inputs when analyses not assigned to the sample.
	assigned to the sample.
Item:	LWSYSCfg6.exe doesn't give any user feedback when trying to save
	configuration and the syscfg.dat is write protected
Description:	Platform: LWSyscfg6.exe Added Alert to user if SYSCFG.DAT is read only.
Item:	PR6 Error Logging Enhancement
Description:	PostResults6: Added logging and rename input file to .BAD when processing
Booonpaon	fails.
Item:	WebTop - Resize crystal report display to window size
Description:	WebTop: Crystal Reports - Resize window properly.
Item:	Sample Modify - ability to recalculate analysis on submission and completion
ILGIII.	date updates
	date apadito

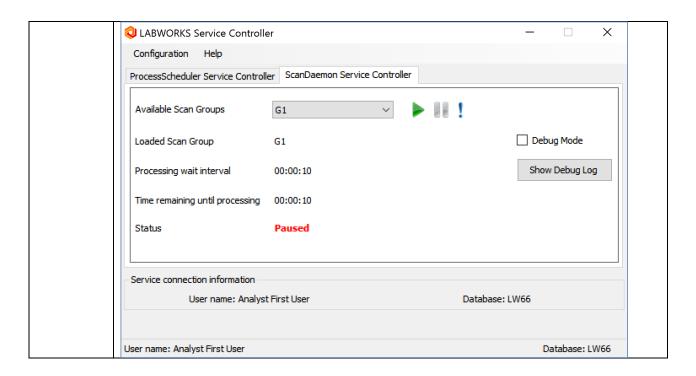

Description:	SampleModify: Added recalculation of due dates when sample collection/submit date are updated.
Item:	Sample Modify. If user doesn't update field width for modified UDF, or uses
	template from previous version then data can be lost
Description:	SampleModify: Removed requirement for user to enter field widths for fields to be modified.
Item:	Add SAP Lookup table editor
Description:	SAP: Added User Interface for modifying Interface Lookup tables.
Item:	PR6 needs ability to run post processing programs like OPCEXP
Description:	PostResults6: Added POSTRUN option to run command line programs as part of
,	PR6 processing.

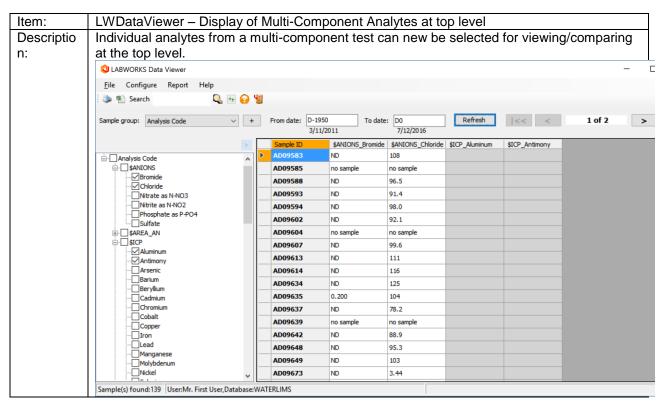

## What's New 6.6

Item:	ScanDaemon as a Service
Description:	ScanDaemon upload of sample results is now available as a service. As a Service, the application starts on when the server boots, runs in the background and supports server restart scripting.

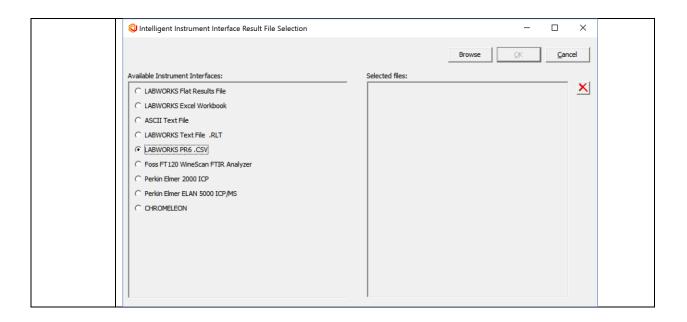

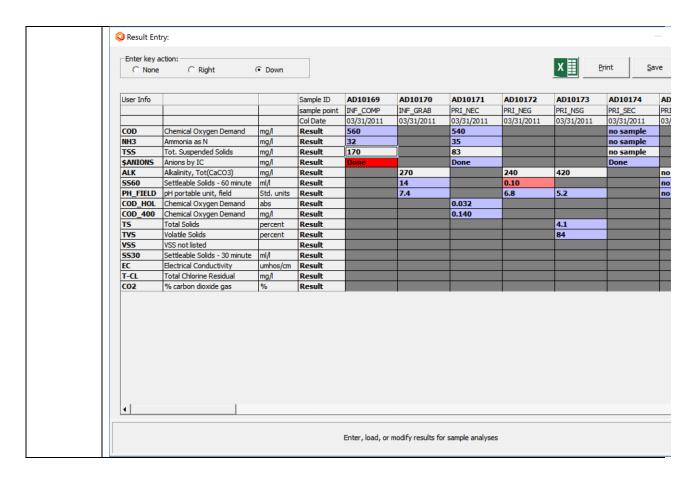

Item:	ResultsEntry – Added Formats
Description:	ResultsEntry import now supports PostResults6 and NGII Formats.

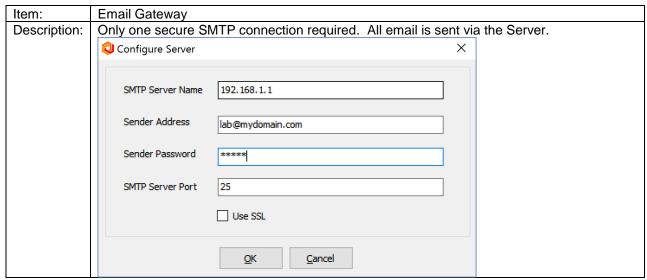

Item:	ResultEntry – Usablity
Descriptio	Improvments:
n:	<ol> <li>Violations of Multicomponent Tests displayed at top level</li> <li>One button export to excel</li> <li>Evaluation of specifications when results container &lt;&gt;. Example Upper Spec 10, result "&gt;15" fails</li> <li>Multi-Compoent – Date/Time edit copied to all analytes.</li> </ol>

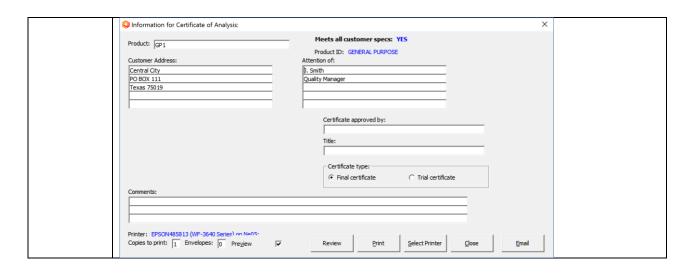

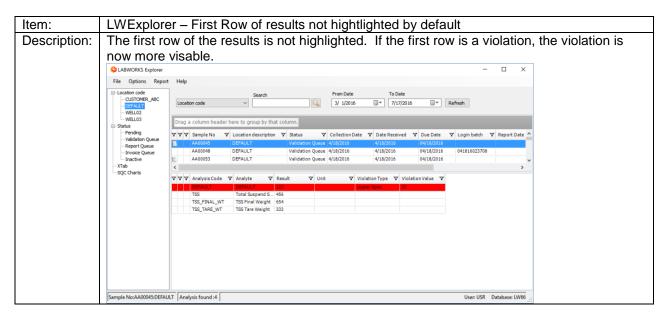

Item:	Certificate of Analysis
Description:	Email of COA as PDF directly from application. COA application can now generate a PDF
-	image, open Micrsoft outlook and attach the PDF in preperation for emailing.

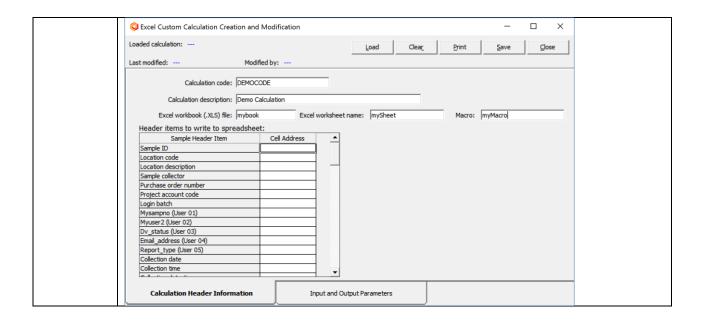

Item:	DMR – Added eDMR output, added calculation options, improved performance
Description:	Added eDMR electronic format output. Added calculation option for Max monthly value over a multiple month range. Improved sample calculation and report generation performance.

Item:	Excel Calculation – Added Macro Support, Rounding of Calculated Values
Description:	Excel calculations can now run a macro as part of the calculation. By adding support to run
	a macro, calculations can now include more user defined actions, such as saving chart
	files, reading/writing external data
	Rounding – Calculated excel values can be rounded as per analysis code rules.
	SYSMGR/ROUND_IMPORTED_RESULTS = TRUE

#### Others:

Item:	LWWebTop – SampleLogin - Removed dependnecy on Bartender	
Description:	LWWebTop – SampleLogin no longer has a hard coded dependency on Bartender. Bartedner Install isn't required on the server if bartender labels aren't going to be generated.	So

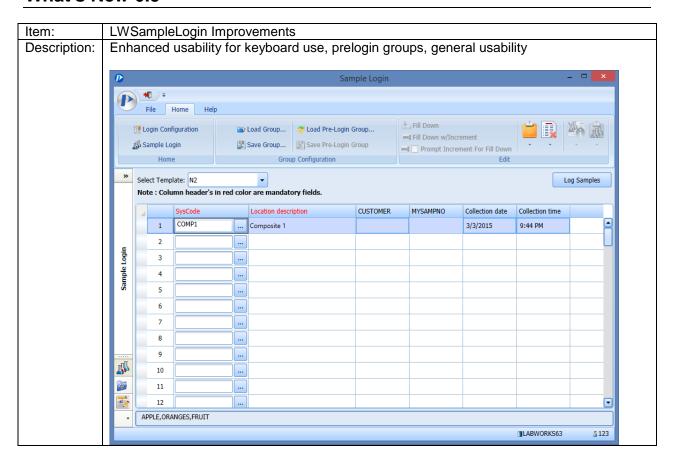

Item:	Labels
Description:	Fix to Bartender Label_Type = 3 Added Nlabels saving to SampleLogin prelogin groups Added Direct integration of Bartender label select to MultiSampleLogin Support Nlabels in when using Select w/ Bartender

Item:	Various
Description: Special Info – Added support for descriptions with single quotes	
	ProcessScheduler - Edit Analyses – Resizable, improved UI
	Updated Help
	Updated software development controls
	Installation – Single step upgrades from 6.X. Improved single Script and XSP file.
	Installation – New Code signing certificate, images, installation folders.
	SIMC Performance – Faster PostResults6, DMR
	Errorlog Viewer – Properly display when many errorlog records.
	Database Support – Added support for SQL 2014, 2016
	O.S. – Support for Windows 10 – View Objects new PDF, JPG viewers.

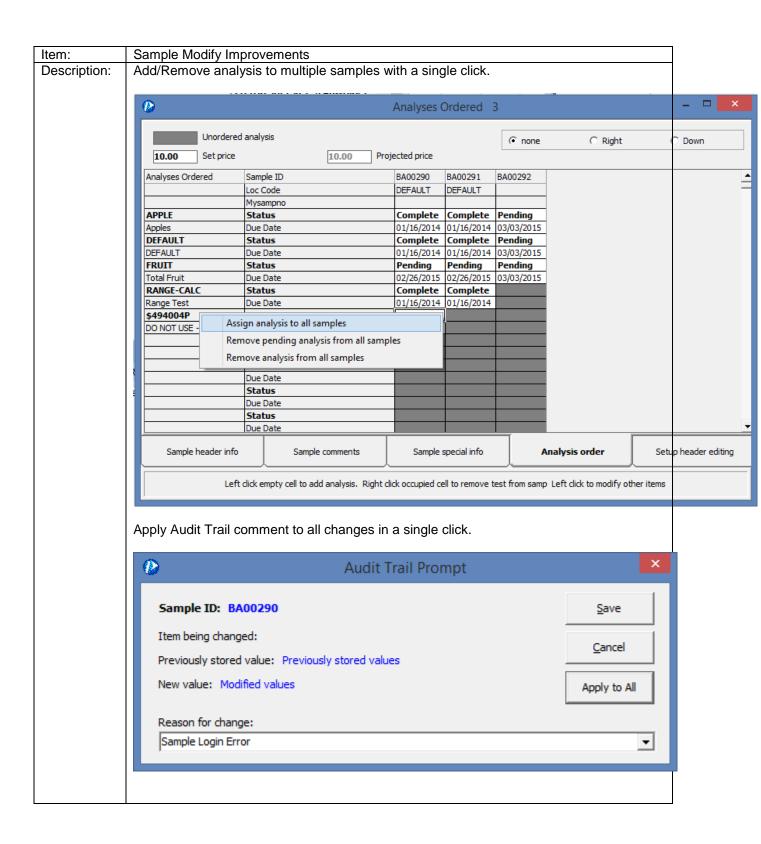

DMR - Performance, Calculation - Average hight month over extended range, eDMR

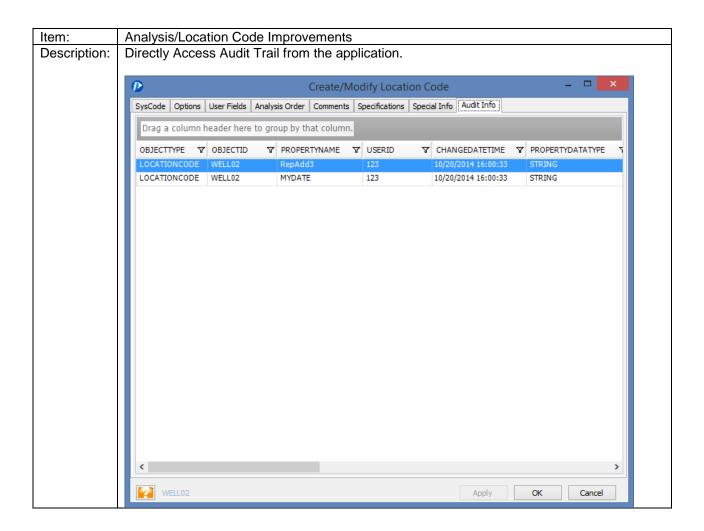

### What's New 6.5

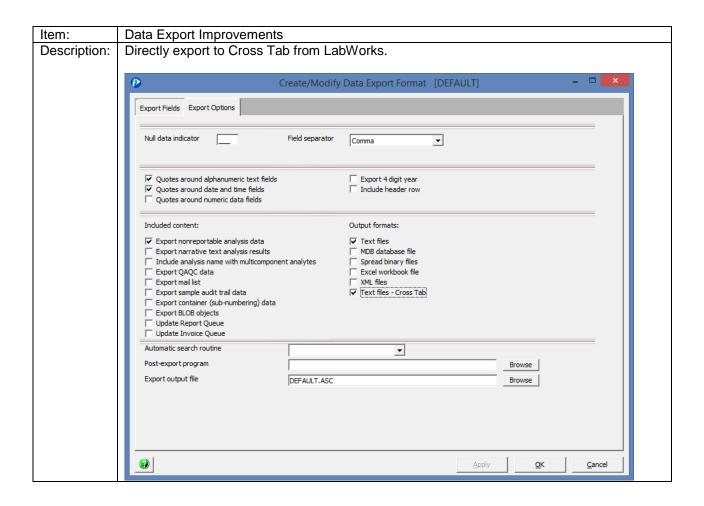

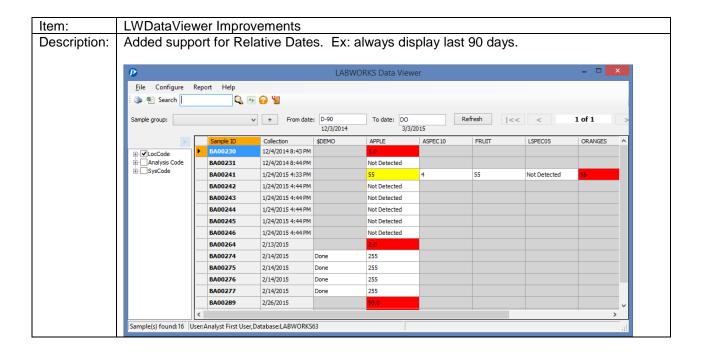

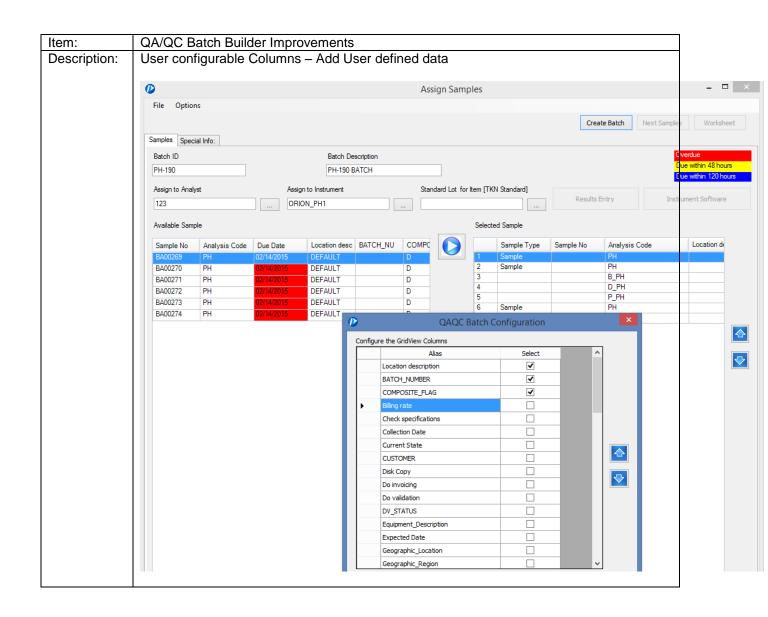

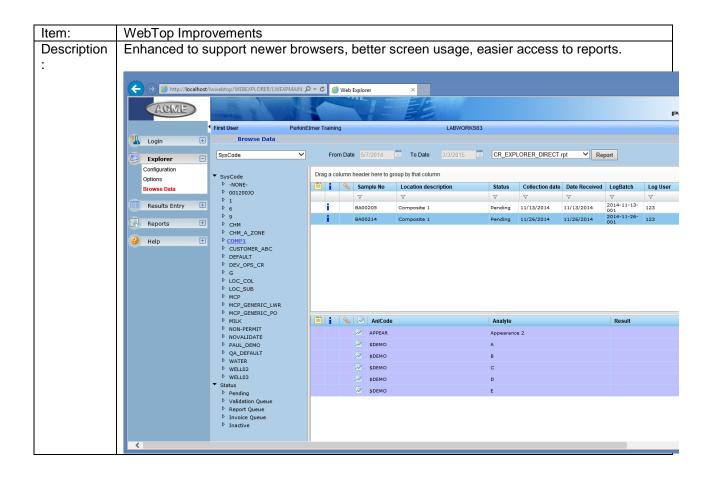

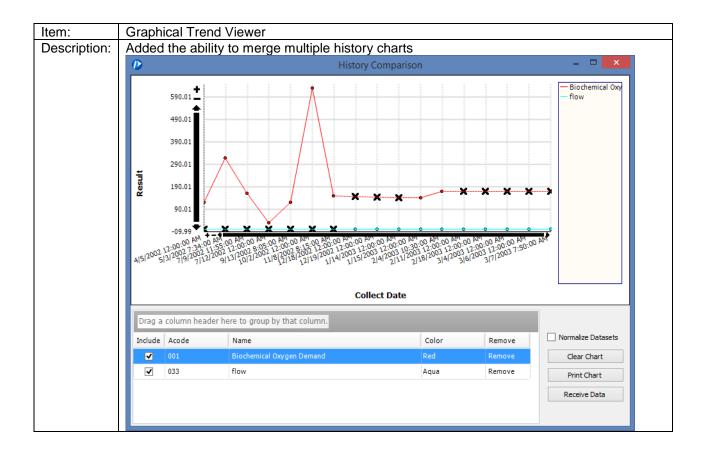

### **Installation Notes**

The installation instructions have been updated to reflect the new features. Please refer to LABWORKS Installation Guide in the documentation folder of the CD.

## **Configuration Changes**

#### Configuration changes in 7.1:

Sr N o	Configuration	Updated in	Default Value	Behaviour
1.	ALLOW_RESULTS_ENTRY_CUSTOM_A NALYST	SYSMGR	NULL	SYSMGRBVAL = -1 allows the user to enter custom Analyst Name in Results Entry
2.	CALIBRATION_NOTIFY_RECIPIENTS	SYSMGR		List of recipients who will receive email notification regarding calibration
3.	CHECKSUMVERSION	SYSMGR	NULL	Checksum Version value: 1 – Non FIPS Compliance, 2 – FIPS Compliance
4.	CINV_PR_APPROVER_EMAILID	SYSMGR		Approver Email ID for LWInventory Management – Purchase Requisition

5.	CONTAINER_INITIAL_LOCATION	SYSMGR	Created	Default Initial Location for newly created Container
6.	CUSTINST_01_WC	SYSMGR	NULL	
7.	DBVERSION	SYSMGR	7.0.0.0	LABWORKS Database Version
8.	DEFAULT_REPLACE_DIVIDE_BY_ZERO	SYSMGR	A	Default Result value to be used in case "Divide By Zero" error occurs during calculation
9.	DEFAULT_REPLICATE_POLICY	SYSMGR	Average	Default Replicate Policy used for result calculation based on replicates
10.	DEFAULT_REPLIMIT_REPLACE_VALUE	SYSMGR		Default RepLimit value used in PAM filtering
11.	DNAME2	SYSMGR	Descript	
12.	DOINV	SYSMGR	NULL	SYSMGRVAL = -1 enables Invoicing
13.	DOREP	SYSMGR	NULL	SYSMGRVAL = -1 enables Reporting
14.	DOSPEC	SYSMGR	NULL	SYSMGRVAL = -1 enables Specification Evaluation
15.	DOVAL	SYSMGR	NULL	SYSMGRVAL = -1 enables Validation
16.	EWRKSHEETNUMBER	SYSMGR	NULL	eWorksheet latest running number used in eWorksheet Application
17.	EXCEL_EXTENSION	SYSMGR	XLS	Default Excel exntension used in the application
18.	IMPORT_REPLICATE_DATA	SYSMGR	FILLNUL LANDAP PEND	SYSMGRVAL value indicates the configuration used for importing replicate data:  a) OVERWRITE  b) APPEND  c) FILLNULLANDAPPEND
19.	PROJECT_ANALAYTE_GROUP	SYSMGR	PROJ	Specifies a Project Analyte Reporting Group e.g. LCOD, SCOL, PROJ, USXX
20.	REPCOPIES	SYSMGR	NULL	SYSMGRLVAL field value is used as default Report Hard Copies in Location List Maintenance
21.	REPLICATE_REPORT_IND_VIOLATION	SYSMGR	NULL	SYSMGRBVAL= -1 indicates that if final output result does not have violation then individual replicate violation will be reported
22.	RESULTS_ENTRY_CUSTOM_ANALYST_ DFLT_NAME	SYSMGR	Automati cally created from results entry	Default Custom Analyst Name used in Results Entry application
23.	RETAIN_WINDOW	SYSMGR	NULL	Number of hours a sample is displayed after Production OK
24.	USER_FILTER_BY_SITE	SYSMGR	NULL	SYSMGRBVAL=-1 allows List of Analysts to be filtered in Results Entry such that Analysts corresponding to Current User's site will be displayed.

## **Hardware / Software Requirements**

The hardware and software requirements are documented separately in the Hardware and Software Requirements document.

## **Upgrade Notes**

There are database changes in this version to support new features. Follow the software Installation Guide for updating the database.

### **Fixed in this Version**

Release notes include only fixes since the previous release.

The following issues were fixed in LABWORKS version 7.1:

Sr.No	Item	Description
1.	Selection of RR files for import will not handle more than 10 RR files at a time.	A bug has been fixed in Legacy MultiComponent Transfer so that import of more than 10 RR files is supported
2.	LWDataservice Bartender label printing doesn't wait for print job to finish, causing errors on multiple print jobs	A bug has been fixed in LWDataService Bartender Label printing so that it support multiple print jobs
3.	Report ownership issue for Crystal route sheets	A bug has been fixed in LWSample Login so that the route sheets can be printed by the users who are in assigned groups for the report, without having to be in the super owner group.
4.	Process Scheduler View Timed Group - Large Number of Assigned Test Codes get overlapped	A bug has been fixed in Process Scheduler so that on View Timed Group screen, large number of Assigned Test Codes are displayed properly
5.	DataViewer has long load time, user should be allowed to cancel the operation	A bug has been fixed in LWDataViewer so that user is able to cancel the data load, in case it is taking significant loading time.
6.	PreLoginGroup Issue USERFLDS change	A bug has been fixed in LWSampleLogin so that PreLoginGroups created before a change was made to USERFLDS/SUSERFLDS table, are loaded after the change as well.  PreLoginXmlUpdate.exe needs to be executed for correcting the data.
7.	Sample Login PreLogin Group – removing one or more Samples results in Data Population Error	A bug has been fixed in LWSampleLogin so that data is populated correctly when loading a PreLogin Group, removing a sample or more, then logging in (or creating collection group)
8.	Edit batch not working in Batch Builder	A bug has been fixed in LW QAQC Batch Builder such that users can edit the batch after creation
9.	Manual Inventory Reconcilliation Issue	A bug has been fixed so that newly added manual reconciliation data is stored in database.
10.	Standard Calculations for MultiComp Test Code with Subset List of Analytes Issue	A bug has been fixed in Results Entry so that Not Detected result configured in SYSMGR, is applied to MultiComponent Test Codes if "Report All Specified Components" setting is true.
11.	LWSampleLogin copy pasting samples does not store pasted Location Code and	A bug has been fixed in LWSampleLogin so that copy pasting samples now stores values for

	Description	LOCCODE and LOCDESCR
12.	Value CONC shows up in text result field if numeric results are present.	A bug has been fixed in Export Sample Data application so that "CONC" value does not show up in the text result field if numeric results are present.
13.	PAM Groups not saving or applying at login	A bug has been fixed in LWSample Login so that PAM Groups are applied to Acodes at login
14.	DESKMENU - New executables	A bug has been fixed in LWDesktop so that new executables/modules are automatically added to the default Desk Menu
15.	Special Info Form evaluation of Required Fields not implemented	A bug has been fixed in LWSample Login so that Special Info Form evaluation of Required Fields is implemented
16.	Configuration menu is not saving	A bug has been fixed in Desktop application so that Configuration Menu changes are saved properly
17.	Custody Tracking error when launching from LWSampleLogin	A bug has been fixed in CustLog6 application so that it works when launched from LWSampleLogin
18.	Sample Login PreLoginGroup Name Field Truncated	A bug has been fixed in LW Sample Login so that when saving a prelogingroup, the name field is not truncated at 27 characters in the field
19.	LWExplorer - No data showing in the Root folder and in the status node	A bug has been fixed in LWExplorer so that data is displayed in the Root folder and in the Status node
20.	Location Code Maintenance won't execute	A bug has been fixed in Location List Maintenance so that when opening the application, an error box is not displayed stopping the execution of the application.
21.	Excel calculation issue	A bug has been fixed in LW Results Entry so that calculation information is loaded even when there is empty value in some Specification
22.	Default  "RESULTSENTRY_DISABLE_TIMECHECK" system manager and other settings missing	A bug has been fixed in LABWORKS application so that required default SYSMGR settings are configured in blank database, Script and XSP
23.	LWExplorer item selection missing leading characters	A bug has been fixed in LWExplorer so that Item Selection drop down does not have missing leading characters
24.	Crystal Report Export cannot add QAANALYTE to FLATDATA_QASPECS	A bug has been fixed in Crystal Report Export so that for QAQC Data, QAANALYTE is added to FLATDATA_QASPECS table in the MDB Data Source
25.	PS Comment greater than 255 issue When Sample Comments Greater Than 255 Characters	A bug has been fixed in Process Scheduler so that if Sample Comments are greater than 255 characters, then left 255 characters are used to update to PSSCHEDULE comments field
26.	Quick Track not launching from QAQCBatching	A bug has been fixed in LWQuickTrack so that it is launched properly from LWQAQCBatchBuilder
27.	SAMPLE CONTAINER CUSTODY TRACKING - Error 9 subscript out of range	A bug has been fixed in CustLog6 application so that it works when launched from Multi Sample Login
28.	Crystal report preview page buttons not working	A bug has been fixed in LWWebTop so that Crystal report preview page buttons work properly

when a dilution factor is applied.  30. Backlog report field size cannot be edited 31. LWViolationReorder incorrect rule validation message when last rule is "Trigger as New Sample"  32. Adding an analysis to a sample in Sample Modify is not properly audited 33. Sample Login - Container Labels Missing 43. Cannot activate NGII possibly due to current state being NULL instead of DRAFT 34. Login Error with Sample Assigned Group Test Code 36. LABOBJMAILLIST records being deleted by LWQAQCBatchBuilder 37. Blank Database has defective table 38. Results not being exported to MOR 39. Sample Modify does not save updated field widths 40. Custody Tracking 6 - Selected container types not working Client Installation 41. Warning DLL message is displayed during Client Installation 42. 40. INIOK Keport Setup data entry issue A bug has been fixed in MOK Keport Setup so	40	MOD Depart nature data antini isawa	
	48.	wor report setup data entry issue	A bug has been fixed in MOK Report Setup so

		T
		that when inserting a value in "Loaded MOR Template" text box, value is loaded even if TAB key is pressed or user selects any other text box
49.	Sample Selection Component gets crashed upon launch	A bug has been fixed in Results Entry - Sample Selection so that the application works properly even if samples are selected using batch names and the same batch is loaded over and over again.
50.	Quotes in analysis codes not supported	A bug has been fixed in Analysis Maintenance so that if user enters double quote in Analysis Code, then Invalid Name prompt will be displayed
51.	COA report display in confusing format	A bug has been fixed in COA Report such that the report format is displayed properly
52.	Process Scheduler Time Group Container Test Associations Not Populating CONTAINER_ANALYSIS table	A bug has been fixed in Process Scheduler so that Process Scheduler Time Group - Container Test Associations are populated from CONTAINER_ANALYSIS table
53.	LWServiceController PS User Fields Mapping Issue	A bug has been fixed in LWServiceController so that PS user field mappings are populated correctly
54.	PS Sample Scheduling Service Issue	A bug has been fixed in Process Scheduler service so that samples are logged as per PAM group configuration
55.	Results Entry by Login Batch Date Modified Change from 6.10 to 7.0 upgrade	A bug has been fixed in LABWORKS application so that submitted date is not updated when a sample is created (i.e moves from NULL state to another one) and hence Sample Selection Dialog displays the recent updated sample records correctly
56.	RESULT ENTRY - Replace result prompt\Violation Flag Disappears	A bug has been fixed in Results Entry so that Violation Flag does not disappear after Replace Result prompt
57.	Display/Usage Issues with Industrial Pretreatment 6	A bug has been fixed in Industrial Pretreatment so that IPP limits can be viewed and modified
58.	LWMultiComponent Transfer - Replicate Result values default to 15 characters	A bug has been fixed in LWMultiComponentTransfer so that Replicate Result values have maximum field length of 14 characters
59.	Process Scheduler expected behavior - change sample status on generating Crystal Report	A bug has been fixed in Process Scheduler so that sample status is changed on generating Crystal Report
60.	Process Scheduler Sort and Spec Flagging Issues	A bug has been fixed in Process Scheduler such that specifications are flagged for the target analysis on the main screen
61.	Location List Maintenance copy from / new-clear / new-keep buttons	A bug has been fixed in Location List Maintenance so that copy from / new-clear / new-keep buttons functionality works properly
62.	QC Batching - adding samples from left to right not removing from left list	A bug has been fixed in LWQAQCBatchBuilder so that when adding Samples from Left to Right, the application now removes the samples from Left List
63.	Analysis Calculation issue	A bug has been fixed in Analysis Maintenance application so that user will be prompted to save unsaved changes before executing Test calculation

64.	Dilution factor affecting PQL in result entry issues	A bug has been fixed in Results Entry so that PQL calaculations based on Dilution factor are consistent across Main Results Entry and Detailed Edit screens
65.	Process Scheduler – Column Configuration Issues	A bug has been fixed in Process Scheduler so that manually entered width for columns in Column Configuration is stored properly
66.	QC Batch adding Special QA Samples to PS as "Not Ready to Collect"	A bug has been fixed in Process Scheduler so that QC Batch adding Special QA Samples to PS has state as "Waiting Analysis"
67.	PostResult6 is not consistently triggering Excel calculations	A bug has been fixed in PostResult6 so that it consistently triggers Excel calculations
68.	Bartender SAMPLE.DAT Missing REQTIME and possibly other data	A bug has been fixed in LABWORKS application so that Bartender SAMPLE.DAT contains REQTIME field
69.	Quicktrack does not allow adding certain containers	A bug has been fixed in LWQuicktrack so that it allows adding containers when corresponding analysis code is not added during sample login
70.	Process Scheduler as Service Not Creating Timed Group Samples	A bug has been fixed in Process Scheduler Service so that Timed Group samples are created even if User Defined field values have decimal values
71.	Location Code user fields not displaying	A bug has been fixed in Location List Maintenance so that User fields are displayed for location codes having large number for SYSMGR setting - "ATTACHMENT_MAXFILESIZE"
72.	LW68Release.xsp contains RECALC = 0	A bug has been fixed in LABWORKS application so that default SYSMGR value for RECALC is True
73.	Alogin6 error when > 50 user fields	A bug has been fixed in AutoLogin application so that maximum 50 User Defined Fields are supported
74.	BLANK DATABASE MASTER PASSWORD	A bug has been fixed so that BLANK DATABASE MASTER PASSWORD is consistent across the application
75.	AutoLogin640 not honoring PSSTATUS	A bug has been fixed in AutoLogin640 to support CURRENT_STATE and REQTIME parameters
76.	PR6 aborts when no rows in input file have a REPNO of 0	A bug has been fixed in PostResults6 so that the input files are processed even if there are no rows having REPNO of 0
77.	LWLicenceManager-LW silently fails when max number of license features is exceeded	A bug has been fixed in LWLicenceManager so that error message is displayed when max number of license features is exceeded
78.	Replicate data not displaying from result entry	A bug has been fixed in Results Entry so that even if there is a discrepancy in Multicomponent/Single Component - Analysis Name in Analysis Maintenance and Result table, replicate data will be displayed properly
79.	Audit trail missing items when results imported a second time	A bug has been fixed in LWMCT so that audit trail is recorded for all items when results are imported a second time
80.	FDEP Report not showing data when using qualifier, picklists not selected in report, last	A bug has been fixed in FDEPREPORT6 so that report data is displayed properly.

		<del>-</del>
	page of report is showing with no data.	
81.	File attachment to batch will not save	A bug has been fixed in QA QC Batch Builder so that file attachment will be saved.
82.	CRGEN6 error for generating html reports	A bug has been fixed in CRGEN6 so that
		reports are generated in html format
83.	eWorksheet Not Posting REPFINAL Data from UPLOAD Sheets	A bug has been fixed in eWorksheet so that REPFINAL Data is posted from UPLOAD Sheets
84.	My preferences menu not working	A bug has been fixed in My Preferences so that change in My Preserences Menu is saved properly
85.	QAQCBatchMgmt URL attachment path	A bug has been fixed in QA QC Batch Builder to support any attachment URL path
86.	Process Scheduler will not allow change to date or time on scheduled group	A bug has been fixed in Process Scheduler so that date or time can be changed on Scheduled group
87.	Results Entry Analysis Awaiting Validation Query Issue	A bug has been fixed in Results Entry so that Analysis Awaiting Validation Query returns data with correct Sample Status
88.	Migration and update database from LABWORKS 6.9 to 7.0	A bug has been fixed so that State Management works properly after migration to 7.0
89.	COA program not working with NWA 6.3	A bug has been fixed in SQC Chart, so that the chart is generated properly
90.	Process Scheduler PSANALYSIS PSANALYSIS2 incorrect split	A bug has been fixed in Process Scheduler so that PSANALYSIS PSANALYSIS2 values are split correctly
91.	PAM Formats for MultiComponent Analysis are incorrect in certain scenarios	A bug has been fixed in PAM so that correct MultiComponent Analysis Formats are applied based on PAM_NO_LESSTHAN INI Setting
92.	Spec Info Form Sizing in Sample Modify (Single Sample Mode)	A bug has been fixed in Sample Modify application so that Spec Info form sizing is maintained in Single Sample Mode
93.	PS Sample Receipt Test Code and Container Associations	A bug has been fixed in Process Scheduler so that PS Sample Receipt Test Code and Container Associations are displayed properly
94.	Creating new analysis from existing one does not work	A bug has been fixed in Analysis Maintenance so that creating new analysis from existing one works properly
95.	Sample Validation from LWExplorer not available	A bug has been fixed in LWExplorer so that if Sample Status is 'Validation Queue' then Sample Validation application can be opened for those samples.
96.	ALOGIN6 - Does not import price	ALOGIN6 - Support for Analysis Price as part of login file
97.	Spec Info Form Sizing Issue	A bug has been fixed in Spec Info Form so that fields at bottom and far right are displayed
98.	MDL and PQL replaced during Excel calculation	A bug has been fixed in Results Entry Import so that MDL and PQL values are not replaced during Excel calculation
99.	Running Autologin640 causes LWCS640 and LABWORKS session not to close properly	A bug has been fixed in LABWORKS so that LWCS640 and LABWORKS sessions are closed properly after running Autologin640.
100.	LWDataViewer clearing criteria when changing date range	A bug has been fixed in LWDataViewer so that the filter criteria is maintained even after changing the Date Range.

101.	LWSampleLogin PreLoginGroups not	A bug has been fixed in LWSampleLogin so that
	loading issue	PreLoginGroups are loaded properly
102.	Result Entry Import - PR6 file - Analysis	A bug has been fixed in Post Results 6 so that
	Comments/Analyst not working	Analysis Comments and Analyst field values are
		posted correctly through Results Entry Import
103.	LABWORKS not creating NWH file for SQC	A bug has been fixed in LABWORKS so that
	Chart	NWH file is created for SQC Chart
104.	Custody Tracking does not save data to	A bug has been fixed in Custody Tracking so
	tables and will not produce a tracking report	that data is saved in tables and tracking report is
		produced.
105.	Have to Reinstall CR13SP28MSI32_0-	A bug has been fixed in LABWORKS so that
	10010309.MSI	installing new builds of LABWORKS does not
		require uninstall/install of Crystal Report
		Runtime
106.	Default result options not working	A bug has been fixed in Multi Sample Login so
		that default result value specified in Analysis
		Maintenance is applied at login
107.	FLATDATA.QASPECS Multicomp Specs	A bug has been fixed in LABWORKS so that
	Issue	specifications are exported correctly for
		MultiComponent Analysis using FLATDATA
		export
108.	Error when attempting to add qualifications	A bug has been fixed in
	to Personnel in Test Environment	LWTrainingAndMaintenance so that
		Qualifications can be added to Personnel
109.	Location code specs not saving	A bug has been fixed in Location List
		Maintenance so that specification changes are
		saved properly

#### **Known Issues and Workarounds**

Support for Crystal Reports has been divided into two installers. Embedded in the standard ClientSetup65.msi is the Crystal 2013 Runtime display support. If the user also requires Crystal XI Report Designer Control (RDC), then the user must install CrystalXIRDC.msi.

When CrystalXIRDC.msi is installed, if IIS isn't installed on the computer, then the folders "css", "html", "images", "js", "prompting" folders get created in the c:\ folder. These folders are created as part of the Crystal Reports merge module. The option in the merge module to disable creation of these folders when IIS isn't present doesn't work as documented.
